Reliability Studies David V. Rosowsky, Jun Hee Kim, 2002-04 This report summarizes the work conducted under Task 1 5 3 Reliability Studies part of Element 1 Testing and Analysis of the CUREE Caltech Woodframe Project The overall objective of Task 1 5 3 was to develop a risk based methodology for seismic design of shearwalls the primary lateral force resisting components in woodframe structures It was anticipated that such a methodology would be based on the reliability principles as well as the emerging performance based concept for seismic design The specific sub objectives of Task 1 5 3 were 1 to conduct a sequence of sensitivity studies to evaluate the contributions of various sources of uncertainty to shearwall performance as predicted using the CASHEW program developed in Task 1 5 1 2 to evaluate the variabilities in and thereby statistically characterize the peak response obtained using suite of ordinary ground motion records developed in Task 1 3 2 and 3 to develop a risk based procedure for performance based design of wood shearwalls Design charts developed using this procedure could be used to determine limits on the seismic weight to ensure target non exceedence probabilities for the different performance drift levels
