## Single Lens The Story Of The Simple Microscope:

*Single Lens* Brian J. Ford, 1985 *Mikroskop Geschichte* *Brain, Mind and Medicine*: Harry Whitaker, C.U.M. Smith, Stanley Finger, 2007-10-27 No books have been published on the practice of neuroscience in the eighteenth century a time of transition and discovery in science and medicine This volume explores neuroscience and reviews developments in anatomy physiology and medicine in the era some call the Age of Reason and others the Enlightenment Topics include how neuroscience adopted electricity as the nerve force how disorders such as aphasia and hysteria were treated Mesmerism and more **Collection - Laboratory - Theater** Helmar Schramm, Ludger Schwarte, Jan Lazardzig, 2008-08-22 This volume launches a new eight volume series entitled *Theatrum Scientiarum* on the history of science and the media which has arisen from the work of the Berlin special research project on Performative Cultures under the aegis of the Theatre Studies Department of the Free University The volume examines the role of space in the constitution of knowledge in the early modern age *Kunstkammern* art and curiosities cabinets laboratories and stages arose in the 17th century as instruments of research and representation There is however still a lack of precise descriptions of the epistemic contribution made by material and immaterial space in the performance of knowledge Therefore the authors present a novel view of the conditions surrounding the creation of these spatial forms Account is taken both of the institutional framework of these spaces and their placement within the history of ideas the architectural models and the modular differentiations and the scientific consequences of particular design decisions Manifold paths are followed between the location of the observer in the representational space of science and the organization in time and space of sight speech and action in the canon of European theatrical forms Not only is an account given of the mutual architectural and intellectual influence of the spaces of knowledge and the performance spaces of art they are also analyzed to ascertain what was possible in them and through them This volume is the English translation of *Kunstkammer Laboratorium* B hne de Gruyter Berlin 2003 [A History of the Life Sciences, Revised and Expanded](#) Lois N. Magner, 2002-08-13 A clear and concise survey of the major themes and theories embedded in the history of life science this book covers the development and significance of scientific methodologies the relationship between science and society and the diverse ideologies and current paradigms affecting the evolution and progression of biological studies The author d **So Very Small** Thomas Levenson, 2025-04-29 The centuries long quest to discover the critical role of germs in disease reveals as much about human reasoning and the pitfalls of ego as it does about microbes Essential reading Thomas Levenson brings to brilliant life the social history of medical detective work and illuminates the fascinating world of pathogenic microbes Deborah Blum New York Times bestselling author of *The Poison Squad* Scientists and enthusiastic amateurs first confirmed the existence of living things invisible to the human eye in the late seventeenth century So why did it take two centuries to connect microbes to disease As late as the Civil War in the 1860s most soldiers who perished died not on the battlefield but of infected wounds typhoid and other diseases Twenty years later

the outcome might have been different following one of the most radical intellectual transformations in history germ theory the recognition that the tiniest forms of life have been humankind's greatest killers It was a discovery centuries in the making and it transformed modern life and public health As Thomas Levenson reveals in this globe spanning history it has everything to do with how we see ourselves For centuries people in the West believing themselves to hold God given dominion over nature thought too much of humanity and too little of microbes to believe they could take us down When nineteenth century scientists finally made the connection life saving methods to control infections and contain outbreaks soon followed The next big break came with the birth of the antibiotic era in the 1930s And yet less than a century later the promise of the antibiotic revolution is already receding due to years of overuse Is our self confidence getting the better of us again So Very Small follows the thread of human ingenuity and hubris across centuries along the way peering into microscopes spelunking down sewers visiting army hospitals traipsing across sheep fields and more to show how we came to understand the microbial environment and how little we understand ourselves Levenson traces how and why ideas are pursued accepted or ignored and hence how human habits of mind can so often make it terribly hard to ask the right questions

*High Content Screening* Steven A. Haney, 2008-01-18 The authoritative reference on High Content Screening HCS in biological and pharmaceutical research this guide covers the basics of HCS examples of HCS used in biological applications and early drug discovery emphasizing oncology and neuroscience the use of HCS across the drug development pipeline and data management data analysis and systems biology with guidelines for using large datasets With an accompanying CD ROM this is the premier reference on HCS for researchers lab managers and graduate students

*Eye of the Beholder: Johannes Vermeer, Antoni van Leeuwenhoek, and the Reinvention of Seeing* Laura J. Snyder, 2015-03-16 The remarkable story of how an artist and a scientist in seventeenth century Holland transformed the way we see the world On a summer day in 1674 in the small Dutch city of Delft Antoni van Leeuwenhoek a cloth salesman local bureaucrat and self taught natural philosopher gazed through a tiny lens set into a brass holder and discovered a never before imagined world of microscopic life At the same time in a nearby attic the painter Johannes Vermeer was using another optical device a camera obscura to experiment with light and create the most luminous pictures ever beheld See for yourself was the clarion call of the 1600s Scientists peered at nature through microscopes and telescopes making the discoveries in astronomy physics chemistry and anatomy that ignited the Scientific Revolution Artists investigated nature with lenses mirrors and camera obscuras creating extraordinarily detailed paintings of flowers and insects and scenes filled with realistic effects of light shadow and color By extending the reach of sight the new optical instruments prompted the realization that there is more than meets the eye But they also raised questions about how we see and what it means to see In answering these questions scientists and artists in Delft changed how we perceive the world In *Eye of the Beholder* Laura J Snyder transports us to the streets inns and guildhalls of seventeenth century Holland where artists and scientists gathered and to their studios and

laboratories where they mixed paints and prepared canvases ground and polished lenses examined and dissected insects and other animals and invented the modern notion of seeing With charm and narrative flair Snyder brings Vermeer and Van Leeuwenhoek and the men and women around them vividly to life The story of these two geniuses and the transformation they engendered shows us why we see the world and our place within it as we do today Eye of the Beholder was named A Best Art Book of the Year by Christie's and A Best Read of the Year by New Scientist in 2015

**The Collected Letters of Antoni Van Leeuwenhoek - Volume 14** A Committee of Dutch Scientists, 2021-07-28 This volume the 14th of a series of 19 contains 21 letters written between August 1701 and March 1704 At least half of these letters were addressed to Fellows of the Royal Society in London Every volume in the series contains the texts in the original Dutch and an English translation The great range of subjects studied by Van Leeuwenhoek is reflected in these letters instruments to measure water pulmonary diseases experiments relating to the solution of gold and silver salt crystals and grains of sand botanical work such as duckweed and germination of orange pips descriptions on protozoa blood spermatozoa and health and hygiene for example and harmfulness of tea and coffee and the benefits of cleaning teeth Volumes One to 13 are available at a reduced price from Swets and Zeitlinger

**Traces of Vermeer** Jane Jelley, 2017-07-14 Johannes Vermeer's luminous paintings are loved and admired around the world yet we do not understand how they were made We see sunlit spaces the glimmer of satin silver and linen we see the softness of a hand on a lute string or letter We recognise the distilled impression of a moment of time and we feel it to be real We might hope for some answers from the experts but they are confounded too Even with the modern technology available they do not know why there is no evidence of any preliminary drawing why there are shifts in focus and why his pictures are unusually blurred Some wonder if he might possibly have used a camera obscura to capture what he saw before him The few traces Vermeer has left behind tell us little there are no letters or diaries and no reports of him at work Jane Jelley has taken a new path in this detective story A painter herself she has worked with the materials of his time the cochineal insect and lapis lazuli the sheep bones soot earth and rust She shows us how painters made their pictures layer by layer she investigates old secrets and hears travellers tales She explores how Vermeer could have used a lens in the creation of his masterpieces The clues were there all along After all this time now we can unlock the studio door and catch a glimpse of Vermeer inside painting light

**Making Scientific Instruments in the Industrial Revolution** A.D. Morrison-Low, 2017-03-02 At the start of the Industrial Revolution it appeared that most scientific instruments were made and sold in London but by the time of the Great Exhibition in 1851 a number of provincial firms had the self confidence to exhibit their products in London to an international audience How had this change come about and why This book looks at the four main and two lesser English centres known for instrument production outside the capital Birmingham Liverpool Manchester and Sheffield along with the older population centres in Bristol and York Making wide use of new sources Dr Morrison Low curator of history of science at the National Museums of Scotland charts the growth of these centres and

provides a characterisation of their products New information is provided on aspects of the trade especially marketing techniques sources of materials tools and customer relationships From contemporary evidence she argues that the principal output of the provincial trade with some notable exceptions must have been into the London marketplace anonymously and at the cheaper end of the market She also discusses the structure and organization of the provincial trade and looks at the impact of new technology imported from other closely allied trades By virtue of its approach and subject matter the book considers aspects of economic and business history gender and the family the history of science and technology material culture and patterns of migration It contains a myriad of stories of families and firms of entrepreneurs and customers and of organizations and arms of government In bringing together this wide range of interests Dr Morrison Low enables us to appreciate how central the making selling and distribution of scientific instruments was for the Industrial Revolution

**Astrobiology, Discovery, and Societal Impact** Steven J. Dick, 2018-05-03 The search for life in the universe once the stuff of science fiction is now a robust worldwide research program with a well defined roadmap probing both scientific and societal issues This volume examines the humanistic aspects of astrobiology systematically discussing the approaches critical issues and implications of discovering life beyond Earth What do the concepts of life and intelligence culture and civilization technology and communication mean in a cosmic context What are the theological and philosophical implications if we find life and if we do not Steven J Dick argues that given recent scientific findings the discovery of life in some form beyond Earth is likely and so we need to study the possible impacts of such a discovery and formulate policies to deal with them The remarkable and often surprising results are presented here in a form accessible to disciplines across the sciences social sciences and humanities Müller's Lab Laura Otis, 2007-04-05 Many scientific structures and systems are named after

Johannes Muller one of the most respected anatomists and physiologists of the 19th century Muller was a mentor to many scientists of his age many of whom would go on to make trail blazing discoveries of their own Among them were Theodor Schwann who demonstrated that all animals are made of cells Hermann Helmholtz who measured the velocity of nerve impulses and Rudolf Virchow who convinced doctors to think of disease at the cellular level This book tells Muller's story by interweaving it with that of seven of his most famous students Contagionism Catches On Margaret DeLacy, 2017-07-25 This book shows how contagionism evolved in eighteenth century Britain and describes the consequences of this evolution By the late eighteenth century the British medical profession was divided between traditionalists who attributed acute diseases to the interaction of internal imbalances with external factors such as weather and reformers who blamed contagious pathogens The reformers who were often outsiders English Nonconformists or men born outside England emerged from three coincidental transformations transformation in medical ideas in the nature and content of medical education and in the sort of men who became physicians Adopting contagionism led them to see acute diseases as separate entities spurring a process that reoriented medical research changed communities established new medical institutions and continues to the

present day     Quarantine Life from Cholera to COVID-19 Kari Nixon,2022-04-12 For readers of Mary Roach and Jared Diamond an innovative look at the histories of different epidemics and what it meant for society alongside what lessons different diseases have to teach us as society battles the novel coronavirus Throughout history there have been numerous epidemics that have threatened mankind with destruction Diseases have the ability to highlight our shared concerns across the ages affecting every social divide from national boundaries economic categories racial divisions and beyond Whether looking at smallpox HIV Ebola or COVID 19 outbreaks we see the same conversations arising as society struggles with the all encompassing question What do we do now In poignant yet relevant detail Niki Kapsambelis author of *The Inheritance* Quarantine Life from Cholera to COVID 19 demonstrates that these conversations have always involved the same questions of individual liberties versus the common good debates about rushing new and untested treatments considerations of whether quarantines are effective to begin with what to do about healthy carriers and how to keep trade circulating when society shuts down This vibrant social and medical history tracks different diseases and outlines their trajectory what they meant for society and societal questions each disease brought up along with practical takeaways we can apply to current and future pandemics so we can all be better prepared for whatever life throws our way     **The Germ of an Idea** Margaret

DeLacy,2016-03-05 Contagionism is an old idea but gained new life in Restoration Britain *The Germ of an Idea* considers British contagionism in its religious social political and professional context from the Great Plague of London to the adoption of smallpox inoculation It shows how ideas about contagion changed medicine and the understanding of acute diseases

Applied Photographic Optics Sidney Ray,2002-02-20 Selected by the American Library Association's Choice magazine as best technical book the first edition of this book soon established itself as the standard reference work on all aspects of photographic lenses and associated optical systems This is unsurprising as Sidney Ray provides a complete comprehensive reference source for anyone wanting information on photographic lenses from the student to the practitioner or specialist working with visual and digital media worldwide This third edition has been fully revised and expanded to include the rapid progress in the last decade in optical technology and advances in relevant electronic and digital forms of imaging Every chapter has been revised and expanded using new figures and photographs as appropriate as well as extended bibliographies New chapters include details of filters measurements from images and the optical systems of digital cameras Details of electronic and digital imaging have been integrated throughout More information is given on topics such as aspherics diffractive optics ED glasses image stabilization optical technology video projection and new types of lenses A selection of the contents includes chapters on optical theory aberrations auto focus lens testing depth of field development of photographic lenses general properties of lenses wide angle lenses telephoto lenses video lenses viewfinder systems camera movements projection systems and 3 D systems     *Biology* Katherine Cullen,Katherine E.
