and cognitive science can provide concrete answers to these questions In *Failing to Communicate* Dr Roger Kreuz explores the answers to these questions We are exposed to the dangers of miscommunication early in life As children we play the Telephone Game and learn an important lesson about the fragility of long communication chains And as adults we are constantly on the lookout for misunderstanding People interrupt each other on average about every ninety seconds in order to check their understanding Despite such vigilance however a great deal of what is said and written is not understood as intended Miscommunication has led to military defeats the loss of spacecraft and even more tragically accidents that cost human lives It plays a role in road rage and social media feuds It haunts the courtroom the boardroom and the singles bar *Failing to Communicate* includes dozens of such examples and explains them in light of what researchers have discovered about how communication works and why it so often fails Research from psychology and cognitive science has revealed a host of specific factors that contribute to misunderstanding Some of these have to do with how our minds make sense of what we hear and read while others are the result of cognitive social and cultural factors The very structure of a given language can be problematic as well In short there is no one reason for miscommunication there are a host of underlying causes Issues of misunderstanding have only multiplied as new mediums for communication have arisen Emails texts and social media posts are even more problematic because they are impoverished modes of communication Without facial cues tone of voice gestures and even the creative use of silence our intentions in these text only mediums are even more likely to go awry *Failing to Communicate* is intended to appeal from beginning to end to the general reader who wants to know more about why our attempts at communication fail so often
