Bockris, Brian E. Conway, Ralph E. White, 2012-12-06 Integrating both theoretical and applied aspects of electrochemistry this acclaimed monograph series presents a review of the latest advances in the field The current volume includes chapters on the mechanism of nerve excitation from an electrochemical standpoint the electronic factor in the kinetics of charge transfer reaction and five other subjects **The Development of the Sarcoplasmic Reticulum** Anthony Martonosi, 2003-09-02 Sarcoplasmic reticulum is a form of endoplasmic reticulum found in large quantities in mature muscle cells Anthony Martonosi presents general information about the development and function of the sarcoplasmic reticulum within a framework of contemporary research on the molecular biology of biosynthetic and signaling processes Focusing on the development of the sarcoplasmic reticulum Martonosi demonstrates the regulatory functions that control the production of its molecular components and investigates the interaction of these lipid and protein molecules with the myogenic neurogenic and hormonal stimuli present in developing muscle cells Martonosi provides extensive experimental support throughout the book *Nucleoside Triphosphatases in Energy Transduction, Cellular Regulation and Information Transfer in Biological Systems* John F. Eccleston, 1992 The topics covered by this work include the conformational coupling in DNA polymerase information transfer the kinetic mechanism of the GAP activated GTPase of p21ras and studies on the structure and mechanism of H ras p21 Dyneins Stephen M. King, 2017-11-22 *Dyneins The Biology of Dynein Motors* Second Edition offers a broad view of dyneins from structure composition and organization to biology of dynein function in both cytoplasm and cilia As the second book in a pair on this topic these works provide an overview of dyneins from structure and function to dysfunction and disease Since the first edition enormous strides have been taken in understanding dynein structure its organization in the axoneme single molecule motor mechanics and the consequences of defects for human biology disease and development This second edition is extensively revised with coverage expanded from 24 to 42 chapters Much of the expanded coverage occurs in Volume Two on dynein dysfunction and disease such as the role of dynein and cancer while Volume One covers the history and evolution of dyneins dyneins in ciliary biology and cytoplasmic dynein biology Presents a broad based up to date view of the biology of dynein motors Discusses approaches from genetics molecular biology biochemistry and biophysics Includes a companion website with movies of dynamic cell behavior Covers the topic in comprehensive chapters written by world experts **Perspectives in Running Water Ecology** M. Lock, 2012-12-06 The discipline of stream ecology has grown

exponentially along with most other areas of science in the last three decades The field has changed from a fish management dominated poor sister of limnology to a discipline with theoretical constructs and ecological insights as rich as those in any area of ecology A focus on energy transformations nutrient turnover and the storage and processing of organic substrates has greatly enhanced the development of current paradigms For example the data base on microbial biochemical invertebrate interactions in streams is now very extensive A survey of the stream ecology literature reveals the central role played by H B Noel Hynes whom I believe to be the world's premier lotic ecologist Professor Hynes produced the major text in the field The Ecology of Running Waters which has served both as an integrative review and as a bridge between the fish water quality orientation of the fifties and sixties to the process oriented nutritional resource watershed perspectives of the seventies It should also be noted that Professor Hynes book The Biology of Polluted Waters served as a basic reference for the earlier period and he has published over 150 research papers the great majority in stream ecology spanning four decades

Information Theory And Evolution (Third Edition) John Scales Avery, 2021-11-24 This highly interdisciplinary book discusses the phenomenon of life including its origin and evolution against the background of thermodynamics statistical mechanics and information theory Among the central themes is the seeming contradiction between the second law of thermodynamics and the high degree of order and complexity produced by living systems As the author shows this paradox has its resolution in the information content of the Gibbs free energy that enters the biosphere from outside sources Another focus of the book is the role of information in human cultural evolution which is also discussed with the origin of human linguistic abilities One of the final chapters addresses the merging of information technology and biotechnology into a new discipline bioinformation technology This third edition has been updated to reflect the latest scientific and technological advances Professor Avery makes use of the perspectives of famous scholars such as Professor Noam Chomsky and Nobel Laureates John O Keefe May Britt Moser and Edward Moser to cast light on the evolution of human languages The mechanism of cell differentiation and the rapid acceleration of information technology in the 21st century are also discussed With various research disciplines becoming increasingly interrelated today Information Theory and Evolution provides nuance to the conversation between bioinformatics information technology and pertinent social political issues This book is a welcome voice in working on the future challenges that humanity will face as a result of scientific and technological progress
