

CLASSIFICATION OF RECEPTORS

Classification of Receptors

Chemoreceptors

Chemical

- which changes a chemical substance to generate a biological signal.
- These are for smell, taste, blood (CO₂, O₂, glucose, AA, and FA).
- Receptors in hypothalamus.

Mechanoreceptors

Mechanical

- which relay extracellular stimulus to intracellular signal transduction.
- Detect stimuli from touch, pressure, hearing, and equilibrium.
- Free nerve ending, expanded tip endings and stray endings.

Photoreceptors

Light

- Respond to stimuli of light.
- Rods and cones in eye.

Thermoreceptors

Temperature

- Detect heat energy (temperatures) in the environment and in the body.
- They are free nerve endings.

Nociceptors

Pain

- detect signals from damaged tissue or detect sensation of pain.
- Free bare nerve endings found in the skin, muscle, joints, and bone.

Perspectives On Receptor Classification:

Perspectives in Receptor Research Dario Giardina, Alessandro Piergentili, Maria Pigini, 1996-06-07 Perspectives in Receptor Research Perspectives on Receptor Classification Heinz Otto Schild, 1987 Perspectives on Receptor Classification J. W. Black, D. H. Jenkinson, V. P. Gerskowitch, 1987-01-01 Cell Surface Receptors: A Short Course on Theory and Methods Lee E. Limbird, 2012-12-06 Cell Surface Receptors A Short Course on Theory and Methods Second Edition is a primer for the study of cell surface receptors The simplified discussion of methods and their underlying principles removes the usual intimidation caused by the specialized vocabulary or sophisticated mathematics that characterize many of the primary papers in this field In this way the basic concepts become emphasized This volume is a starting point a textbook as well as a manual to which the investigator can return for a refresher course when needed Trends in Receptor Research P. Angeli, 2013-10-22 The 8th Camerino Noordwijkerhout Symposium has continued along its traditional path of interdisciplinary cooperation Chemists biochemists pharmacologists biophysicists and physiologists are all involved in the task of improving our knowledge of the mechanisms of drug receptor interaction and of the heterogeneous nature of biological molecules In this volume leading researchers have contributed state of the art information on receptor chemistry Newest developments are covered with particular reference to receptors of the nervous system SAR studies receptor isolation receptor cloning receptor topography biomedical consequences of occupancy receptor regulation and receptor theory This will be of great interest to pharmacologists biochemists and medicinal chemists as well as a valuable source of reference for medical students and postgraduate students in related fields **Pharmacological Sciences: Perspectives for Research and Therapy in the Late 1990s** A. Claudio Cuello, Brian Collier, 2012-12-06 This volume arose from the scientific program of the XIIth International Congress of Pharmacology held in Montreal Canada July 24 29 1994 The scientific program included plenary lectures and symposia in addition to poster presentations and colloquia The abstracts of the Congress presentations were published as supplement 1 of volume 72 by the Canadian Journal of Physiology Dr Brian Collier was chair of the scientific program committee and thus also collaborated on this work The objective that we pursued was to produce a volume of reasonable size which would feature all of the plenary lectures and symposia from those authors who agreed to participate To this end we solicited mini reviews from plenary lecturers and asked symposia organizers to coordinate a single short review covering the individual topics within their event Those who accepted this challenge are evident in this volume We express our gratitude to these authors for doing so and for exercising considerable ingenuity in completing their task within a reasonable time Textbook of Receptor Pharmacology, Second Edition John C. Foreman, Torben Johansen, 2002-08-28 The bestselling first edition of Textbook of Receptor Pharmacology originated from a renowned course in receptor pharmacology taught at the University College of London for the past three decades Its innovative format united four major approaches to the study of receptors molecular biology quantitative functional studies of

agonists and antagonists ligand binding and signal transduction systems The second edition builds on this foundation This edition streamlines the material and focuses on cell membrane receptors along with their immediate signal transducers The section on the molecular structure of receptors reflects the advances in this area This edition also includes two restructured new chapters one on G proteins and one on tyrosine kinases as signal transducers Several chapters also contain problems for students to solve as well as worked out solutions The book contains over one hundred useful diagrams and tables to aid illustration of concepts and a helpful appendix explaining the simple mathematics used in the text A time saving resource and comprehensive textbook Textbook of Receptor Pharmacology Second Edition provides in depth up to date coverage of this still rapidly expanding research area that is both fundamental to the science of pharmacology and on the cutting edge of new drug development **The Pharmacology of Functional, Biochemical, and Recombinant Receptor Systems T.**

Kenakin, J. A. Angus, 2012-12-06 This the 148th volume of the Handbook of Experimental Pharmacology series focuses on the very core of pharmacology namely receptor theory It is fitting that the originator of receptor pharmacology A J CLARK authored the fourth volume of this series 63 years ago In that volume CLARK further developed his version of receptor theory first described four years earlier in his classic book The Mode of Action of Drugs An examination of the topics covered in volume 4 reveals a striking similarity to the topics covered in this present volume pharmacologists today are still as interested in unlocking the secrets of dose response relationships to reveal the biological and chemical basis of drug action as they were over half a century ago Sections in that 1937 volume such as Curves relating exposure to drugs with biological effects and Implications of monomolecular theory show Clark's keen insight into the essential questions that required answers to move pharmacology forward With the advent of molecular biological cloning of human receptors has come a transformation of receptor pharmacology Thus the expression of human receptors into surrogate host cells helped unlock secrets of receptor mechanisms and stimulus transduction pathways To a large extent this eliminates the leap of faith required to apply receptor activity of drugs tested on animal receptor systems to the human therapeutic arena However a new leap of faith concerning the veracity of the effects found in recombinant systems with respect to natural ones is now required Cell Surface Receptors Lee E. Limbird, 2006-06-02 Cell Surface Receptors A Short Course on Theory and Methods 3rd Edition links theoretical insights into drug receptor interactions described in mathematical models with the experimental strategies to characterize the biological receptor of interest The study of receptors has changed considerably over the period of the publication of the three editions of this book The cloning of several genomes makes it unlikely that preparations of receptors now or in the future will arise from their purification as trace proteins from native tissues but rather from a myriad of molecular approaches Nonetheless understanding the molecular mechanisms and ultimately the in vivo biology of these receptors means that investigators will engage in molecular cellular and ultimate in vivo strategies It should be of value to investigators who want to identify characterize and understand the biology of a receptor of interest

G Protein-Coupled Receptors Gabriel Berstein, 2019-04-24 Covering recently developed methods in membrane bound receptors this book emphasizes receptor structure and function knowledge of which is essential to the study of signal transduction G Protein Coupled Receptors has culled contributors from domestic and international sources providing a broad base of knowledge Some topics covered are the r
