Regional Development Reconsidered:

Regional Development Reconsidered Gündüz Atalik, Manfred M. Fischer, 2012-12-06 In the last few years research on regional development has increased dramatically Real world concerns have to a certain extent driven this scientific concern of interest The field has been given a big boost in particular by the process of European integration and the attempt to understand how this deeper integration will work at the regional level This volume makes a modest attempt to reconsider the issue of regional development mainly from an European perspective and in the light of the transition of society towards a knowledge driven economy It originated from the Thirteenth European Advanced Studies Institute in Regional Science held in Istanbul July 28 2000 In producing the book as friends and colleagues we have benefited from the possibility of exchange of ideas and experience We have also received useful assistance from the referees who have offered observations and advice in their written reports The soundness of their comments has contributed immensely to the quality of the volume We should in addition like to acknowledge the timely manner in which contributing authors have responded to our requests and their willingness to follow the stringent editorial guidelines Regional Development Reconsidered Allen John Scott, Michael Storper, 1990

The Theory, Practice and Potential of Regional Development Kelly Vodden, David Douglas, Sean Markey, Sarah Minnes, Bill Reimer, 2019-07-04 Canadian regional development today involves multiple actors operating within nested scales from local to national and even international levels Recent approaches to making sense of this complexity have drawn on concepts such as multi level governance relational assets integration innovation and learning regions These new regionalist concepts have become increasingly global in their formation and application yet there has been little critical analysis of Canadian regional development policies and programs or the theories and concepts upon which many contemporary regional development strategies are implicitly based This volume offers the results of five years of cutting edge empirical and theoretical analysis of changes in Canadian regional development and the potential of new approaches for improving the well being of Canadian communities and regions with an emphasis on rural regions It situates the Canadian approach within comparative experiences and debates offering the opportunity for broader lessons to be learnt This book will be of interest to policy makers and practitioners across Canada and in other jurisdictions where lessons from the Canadian experience may be applicable At the same time the volume contributes to and updates regional development theories and concepts that are taught in our universities and colleges and upon which future research and analysis will build

Regional Development Reconsidered Urban Foundation, 1994 *Handbook of Social Capital and Regional Development* Hans Westlund, Johan P. Larsson, 2016-12-30 The role of social capital in regional development is a multifaceted topic which is studied all over the world using various methods and across numerous disciplines It has long been evident that social capital is important for regional development however it is less clear how this works in practice Do all types of social capital have the same effects and are different kinds of regions impacted in the same way This book is the first to offer an

overview of this rapidly expanding field of research and to thoroughly analyse the complex issue of social capital and regional development

The Routledge Handbook to Regional Development in Central and Eastern Europe Gábor Lux, Gyula Horváth, 2017-07-06 Twenty five years into transformation Central and Eastern European regions have undergone substantial socio economic restructuring integrating into European and global networks and producing new patterns of regional differentiation and development Yet post socialist modernisation has not been without its contradictions manifesting in increasing social and territorial inequalities Recent studies also suggest there are apparent limits to post socialist growth models accompanying a new set of challenges within an increasingly uncertain world Aiming to deliver a new synthesis of regional development issues at the crossroads between post socialism and post transition this book identifies the main driving forces of spatial restructuring in Central and Eastern Europe and charts the different regional development paths which take shape against the backdrop of post crisis Europe A comparative approach is used to highlight common development challenges and the underlying patterns of socio economic differentiation alike The issues investigated within the Handbook extend to a discussion of the varied economic consequences of transition the social structures and institutional systems which underpin development processes and the broadly understood sustainability of Central and Eastern Europe s current development model This book will be of interest to academics and policymakers working in the fields of regional studies economic geography development studies and policy

Introduction to Regional Economic Development Mustafa Dinc, 2015-12-18 This is a relatively simple and easy to read introduction of major regional and local economic development theories their theoretical evolution and other relevant topics such as governance institutions and local leadership within the globalization context It also discusses some basic analytical tools and provides a template for them in an easy to use MS Excel spreadsheet application It introduces conflict management procedures into regional development process and provides a regional decision support framework

Leadership and Institutions in Regional Endogenous Development Robert John Stimson, Roger Stough, Maria Salazar, 2009-01-01 The authors of this comprehensive book provide a detailed rationale and original theory for the study of leadership and institutional factors including entrepreneurship in the growth and development of cities and regions They demonstrate why leadership institutions and entrepreneurship can and indeed do play a crucial enhancing role as key elements in the process of regional endogenous growth The so called new growth theory emphasizes endogenous processes While some of the literature refers to leadership and institutional factors there has been little analysis of the explicit roles these factors play in the growth and development of cities and regions This book remedies that gap beginning with a brief overview of the evolution of the new growth theory in regional economic development in which the emphasis is on endogenous factors The book then discusses leadership and institutional factors in that context creating a new path for understanding regional economic development processes Multiple case studies from different parts of the world illustrate the theoretical concepts Students and scholars in regional development planning and public policy will

find this volume invaluable **Handbook of Regional Growth and Development Theories** Roberta Capello, Peter Nijkamp, 2010-01-01 This Handbook is essential reading for anyone with an interest in the explanation of economic growth in the space economy The editors and the individual contributors are to be congratulated on producing such an important collection of review essays which is destined to become one of the definitive reference books on the subject John McCombie Scienze Regionali offers a valuable up to date overview of many aspects of these important theoretical developments Peter Wood Environment development theories of innovation knowledge and space and regional production factors and growth theories and space This book will be a source of reference and information for both scholars and students in the area of regional economics European Regional Growth Bernard Fingleton, 2013-06-29 Looking into the future and trying to visualize long run regional disparities is difficult There is no agreed single theory to guide our model building although some insight can be gained from analysis of the past and by looking at the different theoretical positions to see if there is any agreement at least in terms of outcome if not in terms of mechanism This is what is attempted in this book which brings together specialists with a common interest in European regional growth and in applying quantitative analytical and simulation techniques in order to provide different perspectives on the topic Many of the Chapters in the book employ the methods of spatial econometrics Spatial econometrics is a suite of statistical and econometric tools dedicated to the analysis of spatial data in other words data that is set within the context of socio economic theories and which can be represented most informatively in mapped form These methods have emerged over the last half century from a series of influential papers and books in the fields of regional science spatial statistics and quantitative geography and are ripe for serious application in the context of the EU's development In particular they provide the means by which to analyze spatially indexed data where the time dimension is essentially suppressed because for instance the variables of interest are not available or are of questionable accuracy which is often the case when one is interested in regional rather than national variations across a number of countries **OECD Regional Development Studies Regions Matter Economic Recovery, Innovation and Sustainable Growth** OECD, 2009-11-24 Recently OECD countries have promoted a new approach to regional policy This report reviews the main dimensions of this policy shift drawing on recent work by OECD including analysis of regional data policy reviews and case studies **Development Issues in Marginal Regions** R.B. Singh, 2019-03-04 Rapid population growth demand for increased food resources and other political economic and social stresses have all contributed to building up pressure for development of marginal regions in both developed and developing countries Ecological issues are also adding up to and increasing marginalization of regions and social groups due to the pressure on natural resources Broadly speaking marginal regions are perceived in concepts of centre periphery fringes and boundaries and frontiers In developing countries marginal regions are the combined effects of ecological economic and social factors For understanding the above complex issues the Study Group on Development Issues in Marginal Regions was established in August 1992 at the

Washington International Geographical Congress Growth and Innovation of Competitive Regions Ugo Fratesi, Lanfranco Senn, 2008-12-29 Time Time b a Space Space Time Time c d Space Space Fig 1 Different possible scales for growth and innovation analyses spatial dimension the sectoral dimension and the time dimension are represented In Fig 1a a regional development analyses are revealed where the economy is sliced vertically into regions and their dynamics are investigated The study of the evolution of industries typical of evolutionary industrial economics is represented in Fig 1b where the economy is divided horizontally into sectoral slices This approach has progressed considerably in recent years see Malerba 2006 for a recent survey Modifications of industries have important spatial implications which however are not normally at the core of these analyses even though spatial patterns of innovation differ greatly from sector to sector Breschi 2000 Our approach operates in the manner of Fig 1a and we will focus on regions extending the analysis to industries only where this is regionally and structurally relevant Hence the approach in the book belongs to the tradition of regional development theories but in contrast to the more traditional analyses we will not consider the region as an economic unit per se Rather interactions between and within regions are very relevant to the performance of individual regions in an integrated world and will be at the core of the analyses of the following chapters **Introducing Human Geographies** Kelly Dombroski, Mark Goodwin, Junxi Qian, Andrew Williams, Paul Cloke, 2024-07-09 Introducing Human Geographies is a travel guide into the academic subject of human geography and the things that it studies The coverage of the new edition has been thoroughly refreshed to reflect and engage with the contemporary nature and direction of human geography This updated and much extended fourth edition includes a diverse range of authors and topics from across the globe with a completely revised set of contributions reflecting contemporary concerns in human geography Presented in four parts with a streamlined structure it includes over 70 contributions written by expert international researchers addressing the central ideas through which human geographers understand and shape their subject It maps out the big foundational ideas that have shaped the discipline past and present explores key research themes being pursued in human geography's various sub disciplines and identifies emerging collaborations between human geography and other disciplines in the areas of technology justice and environment This comprehensive stimulating and cutting edge introduction to the field is richly illustrated throughout with full colour figures maps and photos The book is designed especially for students new to university degree courses in human geography across the world and is an essential reference for undergraduate students on courses related to society place culture and space *Dynamic Agroindustrial Clusters* Gabriel Casaburi, 1999-03-08 The recent economic liberalization in developing countries is making many sectors succumb to new competitive pressures Governments face the dilemma of how to help firms compete without falling back into failed dirigiste policies Based on recent findings on the importance of inter firm cooperation public private collaboration and local policies in boosting competitiveness this book analyzes how much these elements explain the new dynamism of two agroindustrial sectors in Argentina and Chile dairy and fresh fruit respectively

Creating Competitiveness David B. Audretsch, Mary Walshok, 2013-02-01 Although competitiveness is typically associated with firms they are not the only organizational body whose performance is dependent upon competitiveness This poignant and insightful book focuses on how the varied economic performance of cities and regions both within nations as well as across nations during the era of the Great Recession also highlights the need for competitiveness Competitive cities and regions enjoy a superior economic performance while their less competitive counterparts experience poorer economic growth and increasing unemployment Using leading frameworks this study provides applications and case studies about what shapes the competitiveness of places in an international context Specific policies that enhance local competitiveness are identified and analyzed Scholars of regional economics urban economics urban planning and public policy as well as policymakers will find plenty of invaluable information in this invigorating book Innovation Clusters and Interregional Competition

Johannes Bröcker, Dirk Dohse, Rüdiger Soltwedel, 2012-11-02 Empirical evidence about cluster building the emphasis of new growth theory on innovation the recent interest in economic geography and the high pressure on politicians to establish favourable conditions for attracting dynamic industries have triggered a wave of research during the last decade trying to understand more deeply why how and where clusters emerge and what factors determine their respective success or failure In this volume the world's leading experts contribute to our understanding of regional innovation cluster formation and the factors influencing regional productivity and innovative performance It provides a timely and comprehensive picture on innovation location networks and clusters as important means in an environment of intensifying interregional competition

Computational Analysis of Firms' Organization and Strategic Behaviour Edoardo Mollona, 2010-09-13 Management and organization theories have in the years developed rich methodological paraphernalia to test hypotheses This book addresses possible applications of computer simulation to theory building in management and organizational theory *Complexity and Spatial Networks* Aura Reggiani, Peter Nijkamp, 2009-08-14 Complex systems analysis has become a fascinating topic in modern research on non linear dynamics not only in the physical sciences but also in the life sciences and the social sciences After the era of bifurcation theory chaos theory syn getics resilience analysis network dynamics and evolutionary thinking currently we observe an increasing interest in critical transitions of dynamic real world systems in many disciplines such as demography biology psychology economics earth sciences geology seismology medical sciences and so on The relevance of this approach is clearly reflected in such phenomena as traffic congestion financial crisis ethnic conflicts eco system breakdown health failures etc This has prompted a world wide interest in complex systems Geographical space is one of the playgrounds for complex dynamics as is witnessed by population movements transport flows retail developments urban expansion lowland flooding and so forth All such dynamic phenomena have one feature in common the low predictability of uncertain interrelated events occurring at different interconnected spatio temporal scale levels and often originating from different disciplinary backgrounds The study of the associated non linear fast and slow dynamic transition paths calls for a

joint research effort of scientists from different disciplines in order to understand the nature the roots and the consequences of unexpected or unpredictable changes in complex spatial systems *Innovation System Frontiers* Brian Wixted, 2009-06-12

Recent economic transformations in the world economy are progressing in two divergent directions international production fragmentation and industrial agglomeration Based on extensive data analysis and using models of interdependencies between key economies this book analyses innovation systems that cross national borders It is shown that technological complexity is an important factor in the formation of highly specific production networks and why for a number of production systems fragmentation and clustering are two sides of the same coin By outlining the picture of a world economy structured around networks of clusters and joined together through systems of linkages of components people and knowledge flows the author helps to promote a better understanding of recent economic transformations
