Regional Economics and Policy Harvey Armstrong, Jim Taylor, 2000 Regional Economics Policy Armstrong, Roger Taylor, 1993-07 Regional Economic Policy Frank J. B. Stilwell, 1972 Regional Economic Policy in Europe Ulrike Stierle-von Schütz, 2008

Regional Economic Policy in Europe presents a tightly focused selection of policy empirical and theoretical perspectives on contemporary dimensions of regional economic policy in the EU. It concentrates on three areas: the dissimilarities and resulting convergence of disparate regions within the EU; the localisation of economic activities and how regions can understand and manage them; and finally the experiences and lessons that can be drawn from European regional policy. While exploring EU cohesion and regional development more widely, the book also examines Spanish, Belgian and Eastern European experiences on growth, human capital, foreign investment and technological spillovers. This up-to-date and thoroughly researched study is one that will be appreciated by academics and researchers of European studies and regional economics in Europe. Policymakers will also find the conclusions reached within the pages of this book invaluable.

Regional Economic Development and Policy David Pinder, 2017 Tools for regional policy with case study: Christian Nicke, 2007-12-04

Essay from the year 2007 in the subject Business economics / Economic Policy, grade 5.0, sehr gut. University of Paderborn, Faculty of Business and Economics, course Public Policy II, language English.

Abstract: As a first approach to the topic, it seems helpful to me to define which factors make a region. In general, the literature mentions three ways how regions could be differentiated: Definition through enumeration (i.e. with examples), Definition in the negative through enumeration of non-regions, and Definition on basis of constructive criteria. Most common in literature is the last approach. Meanwhile, the European Union in particular also follows the first possibility for defining the regions within the EU. As a workable definition of a region, the following definition on basis of constructive criteria is suggested: Regions: A region is a geographical part of a whole economy that could be identified by means of political and administrative institutions. As constructive criteria, a region is defined through free trade between certain regions, mobility of production factors, consistent currency, fiscal and macro-economic policy, and shared superior institutions. The wider a nation's area is and the more regions a nation contains, the bigger the chance that the regions have different levels of economic development and economic power. The overall development of an economy is the sum of the development of the individual regions; more exactly, the sum of individual economies. From this follows that the economic power of the certain regions must be bettered should the macroeconomic development be improved. This cognition leads to the development of a special field of public policy: regional economic policies. Regional policy should achieve two major goals: maximise economic growth and minimise social costs. As I would show in the next chapter, regional economic policy includes a number of instruments. From this, the definition of regional policy is as follows: Regional policy is the sum of law, strategies and measures for setting and influencing a framework and processes in particular areas of a nation through the government. With special regional policy, government seeks to

reduce spatial disparities in economic **Regional Economics** Marion Temple,1994 This new and up to date text explains those aspects of economics most relevant to understanding contemporary issues facing the regional economy in the second half of the 1990s The region is considered in the context of the subregional and local urban economies and also in relation to the wider national and supranational economic framework The influence of the European Community is given particular consideration The components of the regional economy and their impact on regional growth potential are explained The practical relevance of the theory is illustrated through appropriate regional examples Regional and urban policies of the 1980s and 1990s are covered Policy objectives and instruments are studied and policy is appraised in light of its contribution and limitations Policy is placed in the context of both the European Community and national and local government authorities

the economic performance of regions had become of increasing concern to politicians and economists in many European counties British policy was of particular interest not only because the changes of the 1960s made it more comprehensive than in most other countries but as some sort of regional policy had been in operation for more than thirty years many lessons could be learned from its evolution This book provides a comprehensive study of this aspect of British policy It starts by outlining the nature of the British regional problem the case for a policy and the contribution of economic theory to the understanding of the regional question In later Parts the development of British policy up to 1967 is described along with its impact on the performance of individual regions and different measures are evaluated with a view to increasing the effectiveness of policy The final chapter outlines the regional policy of the European Economic Community and shows what effect membership would have on British policy **Regional Analysis and Regional Policy** William H. Regional Economic Policy H. Folmer, 2012-12-06 Impact analysis of economic policy is a subject which is gaining in creasing interest in both theoretical and applied economic research Two main reasons for the growing interest can be distinguished First the situation of the government s finances is making it more than ever necessary to assess critically the effects of the instruments used to pursue public policy goals Secondly because of the economic stagnation government will be increasingly appealed to for support Impact analysis however is hampered by three major problems methodological deficiencies lack of econometric approaches which have been adapted to the specific conditions of this kind of analysis and data availability The present book deals with these problems in the context of regional economic policy However the main findings are broadly applicable in various other fields This book is primarily oriented towards those who have a practical interest Therefore attention is mostly paid to the practical aspects of the methodology and the measurements methods Furthermore the methodologi cal and econometric parts are supplemented by two extensive case studies Three people have contributed constructive criticisms and suggestions on some chapters of the book Peter Nijkamp Theo Dijkstra and Manfred

Fischer I am very grateful for their support They of course share no blame for any deficiencies in the present form of the book I also gratefully acknowledge the assistance of Harry Barkema and Marja Schuring with the computations
