Hyaluronan in Cancer

Biology Robert Stern, 2009-03-07 Hyaluronan biology is being recognized as an important regulator of cancer progression Paradoxically both hyaluronan HA and hyaluronidases the enzymes that eliminate HA have also been correlated with cancer progression Hyaluronan a long chain polymer of the extracellular matrix opens up tissue spaces through which cancer cells move and metastasize It also confers motility upon cells through interactions of cell surface HA with the cytoskeleton Embryonic cells in the process of movement and proliferation use the same strategy It is an example of how cancer cells have commandeered normal cellular processes for their own survival and spread There are also parallels between cancer and wound healing cancer occasionally being defined as a wound that does not heal The growing body of literature regarding this topic has recently progressed from describing the association of hyaluronan and hyaluronidase expression associated with different cancers to understanding the mechanisms that drive tumor cell activation proliferation drug resistance etc No one source however discusses hyaluronan synthesis and catabolism as well as the factors that regulate the balance This book will offer a comprehensive summary and cutting edge insight into Hyaluronan biology the role of the HA receptors the hyaluronidase enzymes that degrade HA as well as HA synthesis enzymes and their relationship to cancer Offers a comprehensive summary and cutting edge insight into Hyaluronan biology the role of the HA receptors the hyaluronidase enzymes that degrade HA as well as HA synthesis enzymes and their relationship to cancer Chapters are written by the leading international authorities on this subject from laboratories that focus on the investigation of hyaluronan in cancer initiation progression and dissemination Focuses on understanding the mechanisms that drive tumor cell activation proliferation and drug resistance

Cell Regulation by Intracellular Signals

Stephane Swillens, 2013-11-21 In 1980 the IVth International Cyclic Nucleotide Conference was held in Brussels As this meeting attracted many investigators involved in cyclic nucleotides and calcium role in intracellular regulation it was thought that this opportunity could be used to organize prior to the Congress an in depth introductory course on the subject This was carried out as a NATO Advanced Study Institute The participants included Ph D students and M D s engaged in a research training but also fully trained and well known researchers who wanted a refresher course on the whole subject During the course most of the participants and lecturers asked to be provided with a text summarizing the basic lectures of the course This book was therefore conceived as a basic textbook on the regulation and action of intracellular signal molecules concentrating mainly on cyclic nucleotides and calcium It was deliberately kept at a basic level We would therefore be happy if it could be used as an introduction for interested M D s or Ph D s working in other fields or entering this field and as a general refresher for researchers interested in the subject For this reason very general schemes have been asked of the authors along with reading lists of available reviews rather than extensive bibliographies The editors should like to thank the

NATO Scientific Affairs Committee for having supported the course and Mrs Gh Wilmes who prepared the manuscripts S
 SWILLENS J E *Mechanisms of Cytotoxicity by NK Cells* Ronald Herberman, 2012-12-02 *Mechanisms of Cytotoxicity by NK Cells* is the resulting book of a workshop focused on the studies that enhance understanding of the basic mechanisms involved in the function and regulation of NK cells The book presents the status of knowledge of the mechanisms responsible for the cytotoxic effects of NK cells and the regulation of their activity The text is further divided into five major sections according to the sequence of the workshop sessions A separate chapter from the sections has been included at the beginning of the book The introductory chapter clarifies some points in the subject area of NK cells particularly its definition The heterogeneity of NK cells is also discussed in this chapter Then the book presents the major topics including the purification and characterization of NK cells and NK target structures and recognition sites The mechanisms of postrecognition interactions between NK cells and targets regulation of NK activity and NK cells and cultured cells with NK like activity are also discussed This book will serve as a helpful guide to students and professionals scientists researchers and professors in the fields of immunology biology microbiology biochemistry among others *Tempests, Poxes, Predators, and People* L.
