Accurate Treatment of Cerebrovascular Diseases: Frontiers in Pathology, Diagnostic Methods and Treatment Targets Shuo Wang, Zhao Jizong, Yuanli Zhao, Zeguang Ren, Shaohua Yang, 2022-04-27 **Genetic and Epigenetic Control on Immune Responses Regulating Molecules in Cancer Development, Progression, and Treatment** Katherine Chiappinelli, Alejandro Villagra, Lidia Karabon, 2024-10-16

In line with recent evidence the development of cancer has been described as uncontrolled cell growth that results from gradual accumulation of genetic and epigenetic alterations involving aberrations in oncogenes tumor suppressor genes and defects in genes engaged in DNA repair As a result cancer cells acquire a neoplastic phenotype and tumor associated antigens TAAs are presented on their surface These target structures should be recognized by cells of the immune system However a sequence of events at the genetic and epigenetic level disturb immune cells and in consequence make them unable to eliminate cancer cells Both innate and adaptive immunity are mobilized against cancer cells In response to the appearance of cells with malignant transformation NK cells release perforin and granzyme causing direct cytolysis of the target cells They can also secrete pro inflammatory cytokines and in that way enhance the anticancer response The activity of NK cells is regulated by a variety of activating and inhibitory receptors including NKG2D KIR CD94 NKG2 heterodimers and natural cytotoxicity receptors TNF family ligands as well as co stimulatory receptors which recognize related molecules on target cells A fundamental trigger of the anticancer immune response is the recognition of TAAs by T cells via the major histocompatibility complex MHC which should be followed by signals from co stimulatory molecules Full activation of T lymphocytes requires a third signal provided by the presence of cytokines and this leads to cell proliferation differentiation and secretion of chemokines and cytokines The effect is to drive the clonal expansion of the T cells directed against TAAs and to recruit other immune effector cells in order to enhance immune defense

The Physiological and Molecular Response of Aquatic Animals to Environmental Stresses Lingling Wang, Vengatesen Thiagarajan (Rajan), Guangxu Liu, Wei Xu, 2022-10-06 **Cumulated Index Medicus**, 1999 *The Origins of Health and Disease* Michael E. Hyland, 2011-04-21

Some phenomena in medicine and psychology remain unexplained by current theory Chronic fatigue syndrome repetitive strain injury and irritable bowel syndrome for example are all diseases or syndromes that cannot be explained in terms of a physiological abnormality In this intriguing book Michael E Hyland proposes that there is a currently unrecognised type of illness which he calls dysregulatory disease Hyland shows how such diseases develop and how the communication and art of medicine good nursing care complementary medicine and psychotherapy can all act to reduce the dysregulation that leads to dysregulatory disease The Origins of Health and Disease is a fascinating book that develops a novel theory for understanding health and disease and demonstrates how this theory is

supported by existing data and how it explains currently unexplained phenomena Hyland also shows how his theory leads to new testable predictions that in turn will lead to further scientific advancement and development

Circulating Regulatory Factors and Neuroendocrine Function Daniela Jezová, John C. Porter, 2013-04-09 During the past several decades much research effort has gone into the elucidation of the role of neuroendocrine systems as secretory and metabolic regulators of cells of a variety of organs and structures including the testes ovaries adrenals thyroid pituitary gland and mammary glands However the role of cells comprising such organs and structures in the modulation of neuroendocrine processes has received considerably less is generally less well appreciated attention and Nonetheless it is important that we understand the actions on neuroendocrine systems of substances that reach the brain by way of the vasculature including hormones cytokines toxins amino acids drugs and similar agents In order to analyze the present state of knowledge on this topic experimental scientists and clinicians whose shared interests include actions of circulating agents on the brain met at a satellite symposium of the XXXI International Congress of Physiological Sciences This symposium entitled Circulating Regulatory Factors and Neuroendocrine Function was held in Smolenice Castle Czechoslovakia June 26 July 1 1989 and reviews delivered at this symposium as invited presentations are published in this volume Presentations given as free communications have been published separately and are available in Endocrinologia Experimentalis 24 1 273 1990
