Regulators and Effectors of Small GTPases, Part E: GTPases Involved in Vesicular Traffic, 2001-02-08 Small GTPases play a key role in many aspects of contemporary cell biology control of cell growth and differentiation regulation of cell adhesion and cell movement the organization of the actin cytoskeleton and the regulation of intracellular vesicular transport This volume and its companions Volumes 255 256 257 and the forthcoming 325 cover all biochemical and biological assays currently in use for analyzing the role of small GTPases in these aspects of cell biology at the molecular level The British National Bibliography Arthur James Wells, 2001 Rab GTPases and Membrane Trafficking Guangpu Li, Nava Segev, 2012 Ypt Rab GTPases form the largest branch of the Ras related small GTPase superfamily and regulate intracellular membrane trafficking in all eukaryotes Since their discovery over two decades ago a wealth of information has accumulated about the roles that *Small GTPases and Their Regulators, Part C: Proteins Involved in Transport*, 1995-09-13 General Description of the Volume Small GTPases play a key role in many aspects of contemporary cell biology control of cell growth and differentiation regulation of cell adhesion and cell movement the organization of the actin cytoskeleton and the regulation of intracellular vesicular transport This volume plus its companion Volumes 255 and 256 cover all biochemical and biological assays currently in use for analyzing the role of small GTPases in these aspects of cell biology at the molecular level Volume 257 provides detailed protocols to effectively produce modify and assay for the function of small GTPases involved in vesicular traffic through the secretory pathway of eukaryotic cells General Description of the Series The critically acclaimed laboratory standard for more than forty years *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences Key Features Assays to measure GTP exchange and hydrolysis Expression and purification of small GTPases Posttranslational modifications of Rab proteins Generation of trans dominant mutants Expression and purification of Rab effector proteins *Trafficking Inside Cells* Nava Segev, 2010-05-30 This book covers the past present and future of the intra cellular trafficking field which has made a quantum leap in the last few decades It details how the field has developed and evolved as well as examines future directions Cumulated Index Medicus, 2000 **Endocytosis and Signaling** Christophe Lamaze, Ian Prior, 2018-08-10 This book focuses on the context dependency of cell signaling by showing how the endosomal system helps to structure and regulate signaling pathways The location and concentration of signaling nodes regulate their activation cycles and engagement with distinct effector pathways Whilst many cell signaling pathways are initiated from the cell surface endocytosis provides an opportunity for modulating signaling networks output In this book first a series of reviews describe the endocytic and endosomal system and show how these subcellular platforms sort and regulate a wide range of signaling

pathway components and phenotypic outputs The book then reviews the latest scientific insights into how endocytic trafficking and subcellular location modulate a set of major pathways that are essential to normal cellular function and organisms development **Evolution of Membrane Signaling and Trafficking in Plants** Markus Geisler, Angus S. Murphy,Heven Sze,2013-06-12 Membrane proteins are essential determinants of many biological processes in plants They function in metabolic processes signal transduction transport of small molecules and polymers across endo and plasma membranes and intercompartmental trafficking of proteins lipids and cell wall components During these integrative processes dynamic interactions of membrane proteins with other membrane or soluble components are thought to provide a high degree of flexibility that usually characterizes higher plants This concept is supported by the recent release of a first partial Arabidopsis interactome by the Arabidopsis Interactome Mapping Consortium <http://www.sciencemag.org/content/333/6042/601.full.htm> The Arabidopsis interactome reveals a strong enrichment of a few network communities including those for transmembrane transport and vesicle trafficking Strikingly the large transmembrane transport community shares a high amount of proteins with the vesicle trafficking community suggesting a strong physical and functional overlap and interaction

Ubiquitin Code: From Cell Biology to Translational Medicine Lingqiang Zhang,Yu Rao,Cui Hua Liu,Daming Gao,Lixin Wan,2021-12-30 Biology and Pathogenesis of Legionella Hayley Newton,Elizabeth Hartland,Matthias Machner,2018-12-07 Legionella pneumophila was first isolated as the causative agent of a deadly infectious pneumonia at a convention of the American Legion forty years ago Since then Legionnaires disease continues to be a significant public health concern Today our understanding of the Legionella genus comprising environmental bacteria and opportunistic human pathogens has dramatically increased The study of how pathogenic Legionella interact with host cells both protozoan and mammalian has not only taught us about host pathogen interactions but has revealed novel and unexpected insights into human cell biology and immunology The capacity of pathogenic Legionella to commandeer cellular processes such as eukaryotic vesicular trafficking to establish an ER like replicative niche reflects the exquisite ability of this pathogen to manipulate eukaryotic cell biology in order to replicate in an intracellular compartment This requires the specific and targeted action of a cohort of translocated bacterial effector proteins In addition we have learnt much about cell autonomous innate immune sensing of intracellular bacteria through the inability of L pneumophila to avoid intracellular mammalian defense mechanisms Now in the age of large scale comparative omics it is clear that different Legionella species utilize different cohorts of effectors to replicate inside eukaryotic cells While we understand some of the strategies employed by L pneumophila and L longbeachae to replicate within eukaryotic cells there is still much to learn about many aspects of the Legionella life cycle This Research Topic highlights the latest findings regarding the biology of Legionella species their interactions with eukaryotic host cells and how the application of various technologies has increased our understanding of this important pathogen GTPases Regulating Membrane Dynamics W. Provides a comprehensive set of articles describing the use and application of state of the art methodologies to identify and characterize these GTPases and their expanding list of regulators and effectors This work also includes methodologies focused on biochemical molecular and advanced imaging techniques **Index Medicus** ,2001 **Ras Superfamily Small G Proteins: Biology and Mechanisms 2** Alfred Wittinghofer,2014-09-26 This second of two volumes discusses subfamily proteins which function in molecular and vesicular transport mechanisms inside the cell In this volume the focus lies on the Rab Ran and Arf subfamily members As in Volume 1 the book is written by international renowned scientists in the field of small G proteins In elaborate reviews biochemistry structure function and G protein effector interactions are described Together with Volume 1 this book provides an comprehensive state of the art work on small G proteins GTPases It is written for Graduates and Professors in Biochemistry and Cell Biology interested in the mechanism and function of small G proteins but are extremely valuable for those who want to move into the field *Endothelial Dysfunction* Helena Lenasi,2018-10-24 The endothelium enables communication between blood and tissues and is actively involved in cardiovascular homeostasis Endothelial dysfunction has been recognized as an early step in the development of cardiovascular diseases respectively endothelium represents a potential therapeutic niche with multiple targets The purpose of the book is to point out some recent findings of endothelial physiology and pathophysiology emphasizing various aspects of endothelial dysfunction connected to the body s internal and external environment While basic features of the endothelium are presented in an introductory chapter the authors of the following 17 chapters have provided extensive insight into some selected topics of endothelial dys function The book would hopefully be useful for anyone interested in recapitulating endothelial patho physiology and expanding knowledge of molecular mechanisms involved in endothelial dysfunction relevant also for further clinical investigations **The Golgi Apparatus and Centriole** Malgorzata Kloc,2019-08-21 This volume takes a closer look how the cell organelles Golgi apparatus also known as the Golgi complex or Golgi body and centriole are structurally and functionally intertwined Initially it was believed that the role of Golgi complex is limited to the packaging and preparation for secretion of various cellular proteins while the centriole participates in cell division and cilia formation However since their discovery nearly 200 years ago it became clear that these two organelles are interacting and that their functions are much more complex and far reaching than previously thought Recent findings indicate that the Golgi Centriole relationship may be important for directional protein transport cell polarization and cell cycle progression Current studies indicate that Golgi and centriole also participate in development and act as cellular and immunological sensors and that their abnormalities lead to cell and developmental abnormalities Alzheimer cancer various lipid disorders and neurological and immunological diseases in humans This volume combines the latest information on the structure molecular composition and roles of Golgi and centriole in various cellular functions and diseases The better understanding of the Golgi centriole interactions may lead to the development of novel therapies for the treatment of various diseases including cancer **Molecular Medical**
