Minds Prakash Mondal, 2017-07-31 In *Natural Language and Possible Minds* How Language Uncovers the Cognitive Landscape of Nature Prakash Mondal attempts to demonstrate that language can reveal the hidden logical texture of diverse types of mentality in non humans contrary to popular belief The widely held assumption in mainstream cognitive science is that language being humanly unique introduces an anthropomorphic bias in investigations into the nature of other possible minds This book turns this around by formulating a lattice of mental structures distilled from linguistic structures constituting the cognitive building blocks of an ensemble of biological entities beings This turns out to have surprising consequences for machine cognition as well Challenging mainstream views this book will appeal to cognitive scientists philosophers of mind linguists and also cognitive ethologists *Proto-Phenomenology and the Nature of Language* Lawrence J. Hatab, 2017-05-05 How is it that sounds from the mouth or marks on a page which by themselves are nothing like things or events in the world can be world disclosive in an automatic manner In this fascinating and important book Lawrence J Hatab presents a new vocabulary for Heidegger s early phenomenology of being in the world and applies it to the question of language He takes language to be a mode of dwelling in which there is an immediate direct disclosure of meanings and sketches an extensive picture of proto phenomenology how it revises the posture of philosophy and how this posture applies to the nature of language Representational theories are not rejected but subordinated to a presentational account of immediate disclosure in concrete embodied life The book critically addresses standard theories of language such that typical questions in the philosophy of language are revised in a manner that avoids binary separations of language and world speech and cognition theory and practise realism and idealism internalism and externalism *Cell Language Theory, The: Connecting Mind And Matter* Sungchul Ji, 2017-11-24 This book represents the results of 45 years of research on a wide range of topics including atomic physics single molecule enzymology whole cell metabolism physiology pharmacology linguistics semiotics and cosmology It describes the first comprehensive molecular theory of the genotype phenotype coupling based on two key theoretical concepts i the conformon the conformational wave packet in biopolymers carrying both the free energy and genetic information and ii the intracellular dissipative structures the chemical concentration waves inside the cell that serve as the immediate drivers of all cell functions Conformons provide the driving forces for all molecular machines in the cell and intracellular dissipative structures coordinate intra and intercellular processes such as gene expression and cell cell communications One of the predictions made by the cell language theory CLT is that there are two forms of genetic information the Watson Crick genes transmitting information in time identified with DNA and the Prigoginian genes transmitting information in space identified with RNA expression profiles The former is analogous to sheet music or written language and the latter is akin to audio music or spoken language both being coupled by conformons acting as the analog of the pianist The new theory of DNA structure and function constructed on the basis of CLT can rationally account for most of the puzzling findings recently unearthed by the ENCODE Encyclopedia of DNA Elements project The Cell

Balibar, 2013-12-17 John Locke's foundational place in the history of British empiricism and liberal political thought is well established. So in what sense can Locke be considered a modern European philosopher? Identity and Difference argues for reassessing this canonical figure. Closely examining the treatise on identity added to the second edition of *An Essay Concerning Human Understanding*, Balibar demonstrates Locke's role in the formation of two concepts central to the metaphysics of the subject: consciousness and the self, and the complex philosophical, legal, moral, and political nature of his terms. With an accompanying essay by Stella Sandford situating Balibar's reading of Locke in the history of the reception of the *Essay* and within Balibar's other writings on the subject, *Identity and Difference* rethinks a crucial moment in the history of Western philosophy.

Attractions of Thought Richard John Kosciuszew, 2018-06-28 We began by perceiving the world through the lenses of symbolic categories to construct similarities and differences in terms of categorical oppositions and to organize our lives according to themes and narratives. Living in this new symbolic universe, the modern humans had a large compulsion to codify and then recodify their experiences to translate everything into representation and to seek out the deeper hidden logic that eliminates inconsistencies and ambiguities. The appending presumption is that sometimes it is taken for granted as fact. However, its decisions are based on the fundamental principles whose assumptions are based on or upon the nature of which were presented by surmising of the one-to-one correspondence having to exist between every element of physical reality and physical theory. This may serve to bridge the gap between mind and world for those who use physical theories. But it also suggests that the Cartesian division is inseparably integrated and structurally real, at least of mention as impenetrably formidable for physical reality as it is based on ordinary language. That explains in no small part why the radical separation between mind and world, as sanctioned by classical physics and formalized by Descartes, yet it remains as philosophical postmodernism attests as one of the most pervasive features of Western intellectual thought.

The Labyrinth of Mind and World Sanjit Chakraborty, 2019-12-06 This book carries forward the discourse on the mind's engagement with the world. It reviews the semantic and metaphysical debates around internalism and externalism, the location of content, and the indeterminacy of meaning in language. The volume analyzes the writings of Jackson, Chomsky, Putnam, Quine, Bilgrami, and others to reconcile opposing theories of language and the mind. It ventures into Cartesian ontology and Fregean semantics to understand how mental content becomes world-oriented in our linguistic communication. Further, the author explores the liaison between the mind and the world from the phenomenological perspective, particularly Husserl's linguistic turn and Heidegger's intersubjective entreaty for *Dasein*. The book conceives of thought as a biological and socio-linguistic product which engages with the mind-world question through the conceptual and causal apparatuses of language. A major intervention in the field of philosophy of language, this book will be useful for scholars and researchers interested in philosophy, phenomenology, epistemology, and metaphysics.
