Neurolaryngology brings together in one volume the latest concepts in this important and developing field. In order to make this text as useful as possible for clinicians, selected chapters on general concepts important to clinical care have been included, including chapters on history, physical examination, clinical voice laboratory assessment, common diagnoses and treatments, and other topics important to all voice patients, including those with neurolaryngological complaints. Starting with a perspective on modern voice medicine, including neurolaryngology and a brief historical overview of the development of laryngology, the text goes on to describe neuroanatomy and physiology, laryngeal function, and the role of chaos in voice disorders. It contains fascinating new ideas on applications of nonlinear dynamics to voice care and research, a topic of great relevance in neurolaryngology. Beginning the section on clinical assessment of voice disorders is a description of the current approach to history and physical examination recommended for patients with neurolaryngological voice disorders. The text contains the most current research and references throughout, presenting the latest information about many conditions, including some rarely covered in the laryngologic literature; it highlights diagnosis and treatment of a wide array of motor and sensory disorders that may impair voice. The interdisciplinary expertise of numerous authors has been invaluable in the preparation of this text; however, every effort has been made to maintain style and continuity throughout. Clinically relevant and thought-provoking, *Neurolaryngology* is the definitive encyclopedic reference in this new subspecialty of laryngology.

**Korean P'ansori Singing Tradition** Yeonok Jang, 2013-11-26. In 2003, the Korean singing tradition of p'ansori joined the Representative List of the Intangible Cultural Heritage of Humanity, a distinctive honor bestowed by the United Nations Educational, Scientific and Cultural Organization. P'ansori is a music genre, an oral tradition comprising arias and narratives. Often, the individual singer acts out the story of young and old, good and bad, and male and female. In *Korean P'ansori Singing Tradition: Development, Authenticity, and Performance History*, Yeonok Jang studies the periodical developments and changes in the performance context, vocal developments, singing style, audience involvement, contemporary performance, cinematic history, and private and government sponsorship of p'ansori. Covering the period from the early development of p'ansori, including the origins and early formation of the genre, to contemporary performance, Jang surveys this remarkable genre of storytelling, song, theater, and performance. Throughout, she considers not only issues of historical context but also questions of cultural identity, past and present. Researchers in the fields of Korean studies, folk music, oral history, ethnic music, narrative, and theatrical music and cultural studies will find this work of significant value.      *Solutions for Singers* Richard Miller, 2004-01-08. those functions To the extent that I have succeeded it should be of interest to physiologists physicians and teachers and students of the VOice The book is by no means a text on laryngology nor is it a treatise on the physiology of breathing mechanics nor yet is it a manual telling how to teach or learn voice production If none of these what is it It is a discussion of the application of breathing mechanics to phonation of interest to the respiratory physiologist of certain aspects of physiology and medicine of interest to the teacher or student of voice and of the problems of voice production and its maladies of interest to the laryngologist I have undergone a number of experiences during the past 50 years which I believe have qualified me to undertake this task with some special hope of success In my youth I studied voice for twelve years with four outstanding teachers and performed publicly as a lieder singer in oratorio chorus and opera Later I trained for and entered the medical profession in the specialty of otolaryngology Later still I engaged in research on the physiology of breathing mechanics and phonation especially singing
