Doomsday Men P. D. Smith, 2024-09-04 The gripping untold story of the doomsday bomb the ultimate weapon of mass destruction Chillingly compelling New Scientist In 1950 Hungarian born scientist Leo Szilard made a dramatic announcement on American radio science was on the verge of creating a doomsday bomb For the first time in history mankind realized that he had within his grasp a truly God like power the ability to destroy life itself The shockwave from this statement reverberated across the following decade and beyond If detonated Szilard s doomsday device a huge cobalt clad H bomb would pollute the atmosphere with radioactivity and end all life on earth The scientific creators of such apocalyptic weapons had transformed the laws of nature into instruments of mass destruction and for many people in the Cold War there was little to distinguish real scientists from that fictional master of megadeath Stanley Kubrick s Dr Strangelove Indeed as P D Smith s chilling account Doomsday Men shows the dream of the superweapon begins in popular culture This is a story that cannot be told without the iconic films and fictions that portray our deadly fascination with superweapons from H G Wells s The War of the Worlds to Nevil Shute s On the Beach and Kubrick s Dr Strangelove or How I Learned to Stop Worrying and Love the Bomb Although scientists admitted it was possible to build the cobalt bomb no superpower would admit to having created one However it remained a terrifying possibility striking fear into the hearts of people around the world The story of the cobalt bomb is an unwritten chapter of the Cold War but now P D Smith reveals the personalities behind this feared technology and shows how the scientists responsible for the twentieth century s most terrible weapons grew up in a culture dreaming of superweapons and Wellsian utopias He argues that in the end the doomsday machine became the ultimate symbol of humanity s deepest fears about the science of destruction Weaving together biography science and art Smith has created a compelling history of physics in the twentieth century focusing on the long lasting search for ever more destructive weapons from the development of chemical warfare in World War I Germany through the arms race of the Cold War Captivating and thoroughly referenced this chronicle should interest a wide audience from science and history buffs to armchair politicians Publishers Weekly

The to Z of Nuclear, Biological and Chemical Warfare Benjamin C. Garrett, John Mason Hart, 2009-09-16 Human experience with

nuclear biological and chemical NBC warfare has been limited especially in comparison to conventional forms of warfare Our experience with nuclear warfare is confined to a period of less than one week during the end of World War II when the United States successfully used two nuclear weapons against targets in Japan The course of biological warfare and modern use of biological weapons are difficult to track owing to the difficulty of differentiating deliberate use from natural outbreaks However the keen potential of biological weapons in acts of terror was shown in the mass disruption caused in the fall 2001 experience in the U S with the release of anthrax through the American postal system Chemical weapons have been used in a handful of conflicts since their introduction to modern warfare during World War I most recently during the Iran Iraq War during the 1980s Despite this limited experience NBC warfare continues to exert a certain fascination among states The A to Z of Nuclear Biological and Chemical Warfare covers the development and use of NBC weapons as well as efforts to limit or control the use of these weapons through a chronology a bibliography an introductory essay and dictionary entries Over 500 cross referenced dictionary entries provide a unique selection of terms related to NBC warfare ranging from basic descriptions of substances used in NBC warfare to details on incidents and episodes where NBC weapons were used Entries are structured around historical events persons important to NBC warfare countries where such weapons have been developed or used and international treaties and treaty related organizations
