Rovenskii, 2000-04-26 This concise text on geometry with computer modeling presents some elementary methods for analytical modeling and visualization of curves and surfaces The author systematically examines such powerful tools as 2 D and 3 D animation of geometric images transformations shadows and colors and then further studies more complex problems in differential geometry Well illustrated with more than 350 figures reproducible using Maple programs in the book the work is devoted to three main areas curves surfaces and polyhedra Pedagogical benefits can be found in the large number of Maple programs some of which are analogous to C programs including those for splines and fractals To avoid tedious typing readers will be able to download many of the programs from the Birkhauser web site Aimed at a broad audience of students instructors of mathematics computer scientists and engineers who have knowledge of analytical geometry i e method of coordinates this text will be an excellent classroom resource or self study reference With over 100 stimulating exercises problems and solutions it Geometry of Curves and Surfaces with Maple will integrate traditional differential and non Euclidean geometries with more current computer algebra systems in a practical and user friendly format *Molecular Photofitting* Tony Frudakis Ph.D., 2010-07-19 In the field of forensics there is a critical need for genetic tests that can function in a predictive or inferential sense before suspects have been identified and or for crimes for which DNA evidence exists but eye witnesses do not Molecular Photofitting fills this need by describing the process of generating a physical description of an individual from the analysis of his or her DNA The molecular photofitting process has been used to assist with the identification of remains and to guide criminal investigations toward certain individuals within the sphere of prior suspects Molecular Photofitting provides an accessible roadmap for both the forensic scientist hoping to make use of the new tests

becoming available and for the human genetic researcher working to discover the panels of markers that comprise these tests By implementing population structure as a practical forensics and clinical genomics tool Molecular Photofitting serves to redefine the way science and history look at ancestry and genetics and shows how these tools can be used to maximize the efficacy of our criminal justice system Explains how physical descriptions of individuals can be generated using only their DNA Contains case studies that show how this new forensic technology is used in practical application Includes over 100 diagrams tables and photos to illustrate and outline complex concepts
