Radar Signals An Introduction To Theory App:

Radar Signals Charles Cook, 2012-12-02 Radar Signals An Introduction to Theory and Application introduces the reader to the basic theory and application of radar signals that are designated as large time bandwidth or pulse compression waveforms Topics covered include matched filtering and pulse compression optimum predetection processing the radar ambiguity function and the linear frequency modulation waveform and matched filter Parameter estimation and discrete coded waveforms are also discussed along with the effects of distortion on matched filter signals This book is comprised of 14 chapters and begins with an overview of the concepts and techniques of pulse compression matched filtering with emphasis on coding source and decoding device The discussion then turns to the derivation of the matched filter properties in order to maximize the signal to noise ratio analysis of radar ambiguity function using the principle of stationary phase parameter estimation and the method of maximum likelihood and measurement accuracies of matched filter radar signals Waveform design criteria for multiple and dense target environments are also considered The final chapter describes a number of techniques for designing microwave dispersive delays This monograph will be a useful resource for graduate students and practicing engineers in the field of radar system engineering

Radar Signals Charles Emerson Cook, Marvin Bernfeld, 1947 **Fundamentals of the Radiolocation and Radionavigation** Stanisław Rosłonec, 2023-01-04 The book presents principles of operation of radar and radionavigation systems The group of radar systems includes primary and secondary radiolocations bistatic and multistatic systems They are illustrated with relevant examples of calculation and applications The issues of increasing the range of the radar systems are presented together with the matched filtering of the used signals Other discussed issues are methods for eliminating interfering signals and researching methods of 3D space Various methods of the monopulse radiolocation are presented in Chapter 12 In Chapters 13 18 terrestrial and satellite radionavigation systems are under discussion The terrestrial systems are Loran C Decca Navigator and Omega The TRANSIT is an example of a hyperbolic satellite system The stadiometric systems GPS GLONASS GALILEO BeiDou IRNSS and QZSS are discussed together with differential systems augmenting of them The ILS MLS and TLS supporting the landing of aircrafts are discussed in Chapter 17 The prospects for replacing of them with satellite systems augmented by appropriate reference ground based stations GBAS are also analyzed Various beacons and ranging devices used in aviation are described in the Chapter 18 This book is intended primarily for students and engineers interested in radar radionavigation and aerospace engineering
