William R. Hendee, E. Russell Ritenour, 2003-04-14 This comprehensive publication covers all aspects of image formation in modern medical imaging modalities from radiography fluoroscopy and computed tomography to magnetic resonance imaging and ultrasound It addresses the techniques and instrumentation used in the rapidly changing field of medical imaging Now in its fourth edition this text provides the reader with the tools necessary to be comfortable with the physical principles equipment and procedures used in diagnostic imaging as well as appreciate the capabilities and limitations of the technologies Environmental Health Dade W. Moeller, 2005 Environmental Health has established itself as the most

succinct and comprehensive textbook on the subject This extensively revised and rewritten third edition continues this tradition by incorporating new developments and by adding timely coverage of topics such as environmental economics and terrorism As in previous volumes the new edition presents balanced assessments of environmental problems examining their local and global implications their short and long range impacts and their importance in both developed and less developed countries of the world The Third Edition also addresses emerging issues such as environmental justice deforestation the protection of endangered species multiple chemical sensitivity and the application of the threshold concept in evaluating the effects of toxic and radioactive materials Whether discussing acid rain ozone depletion global warming or more traditional subjects such as the management and control of air water and food Dade Moeller emphasizes the need for a systems approach As with previous volumes Environmental Health Third Edition offers a depth of understanding that is without peer

While it covers technical details it is also a book that anyone with an interest in the environment can pick up and browse at random *Radon, Health and Natural Hazards* G.K. Gillmore, F.E. Perrier, R.G.M. Crockett, 2018-05-01 This volume draws together the final outputs of the five year UNESCO IUGS IGCP Project 571 and presents new data on radon in the built and natural environments radon as a diagnostic tool of geophysical phenomena reflections and recommendations on the future of radon research and a critique of radon's asserted use as a therapy By considering all the aspects of radon as a health hazard and potential indicator of natural hazards the project brought together the dispersed research from universities governmental and non governmental bodies as well as commercial companies on radon within an interdisciplinary context to facilitate scientific advancement and understanding Through the establishment of working groups at regional and local levels and the development of research networks a variety of international meetings were organized and a number of journal special issues published to disseminate the results The scale of the project was global scientists from over 20 European countries plus countries in the Americas Asia and the Middle East have been participants of the project This volume results from UNESCO IUGS IGCP Project 571 Radon Health and Natural Hazards Radon has significant socio economic relevance in the developed and developing worlds primarily in terms of the indoor radon hazard but also certain geohazards This volume presents a broad range of papers including methodological technological and interpretative aspects as well as case study material This volume results from UNESCO IUGS IGCP Project 571 Radon Health and Natural Hazards This volume presents a broad range of papers including methodological technological and interpretative aspects as well as case study material

NUREG/CR. U.S. Nuclear Regulatory Commission, 1980 *Radioactive Releases in the Environment* John R. Cooper, Keith Randle, Ranjeet S. Sokhi, 2003-05-07 This text brings together in one single comprehensive reference the fundamentals of radioactivity It uniquely fills the gap in the market as no other books deal with environmental radioactivity to this degree Timely and invaluable as the studies of environmental processes and the awareness of the impact of human activity on our environment are increasing Links all three main aspects of environmental radioactivity Principles Transport and Measurement Useful to a wide readership students lecturers researchers companies and environmental consultants

Radiation Exposure from Consumer Products and Miscellaneous Sources National Council on Radiation Protection and Measurements, 1977 *Medical consequences of nuclear warfare*, 1989 **Radiation Exposure of the U.S. Population from Consumer Products and Miscellaneous Sources** National Council on Radiation Protection and Measurements, 1987 **Virgil C. Summer Nuclear Station Unit 1, Operation**, 1981 *The Disposition Dilemma* National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on Alternatives for Controlling the Release of Solid Materials from Nuclear Regulatory Commission-Licensed Facilities, 2002-06-13 The U S Nuclear Regulatory Commission USNRC and its predecessor the U S Atomic Energy Commission AEC have attempted since the 1970s to give greater uniformity to the policy and regulatory

framework that addresses the disposition of slightly radioactive solid material The issue remains unresolved and controversial The USNRC has tried to issue policy statements and standards for the release of slightly radioactive solid material from regulatory control while such material has been released and continues to be released under existing practices In 1980 the USNRC proposed regulatory changes to deregulate contaminated metal alloys but withdrew them in 1986 and began work with the Environmental Protection Agency EPA to develop more broadly applicable federal guidance In 1990 the USNRC issued a more sweeping policy as directed by the Low Level Radioactive Waste Policy Amendments Act of 1985 LLWPAA declaring materials with low concentrations of radioactivity contamination below regulatory concern BRC and hence deregulated Congress intervened to set aside the BRC policy in the Energy Policy Act of 1992 after the USNRC's own suspension of the policy Subsequent attempts by USNRC staff to build consensus among stakeholder groups as a basis for future policy articulations were met by boycotts of stakeholder meetings both in the immediate aftermath of the BRC policy and again in 1999 during public hearings on a new examination of the disposition of such materials The only USNRC standard addressing the disposition of slightly radioactive solid material is a guidance document published in June 1974 by the AEC whose regulatory authority over civilian nuclear facilities the USNRC assumed upon its creation a few months later in January 1975 In August 2000 with another examination of this issue under way the USNRC requested that the National Research Council form a committee to provide advice in a written report The National Research Council established the Committee on Alternatives for Controlling the Release of Solid Materials from Nuclear Regulatory Commission Licensed Facilities to address this task The committee's task involved evaluating and providing recommendations on the history of the technical bases and policies and precedents for managing slightly radioactive solid material from USNRC licensed facilities the sufficiency of technical bases needed to establish standards for release of solid materials from regulatory control clearance standards and the adequacy of measurement technologies the concerns of stakeholders and how the USNRC should incorporate them and the efforts of international organizations on clearance standards The committee was also asked to examine the current system for release of slightly radioactive solid material from regulatory control to recommend whether the USNRC should continue to use this system and to recommend changes if appropriate The committee's fact finding process included two site visits to waste brokering facilities and nearly 40 invited presentations from the USNRC the U S Department of Energy DOE and EPA staff stakeholder organizations nuclear industry organizations and other interested parties In conducting its study the committee first examined the current system of standards guidance and practices used by the USNRC and agreement states to determine whether to release slightly radioactive solid material from further regulatory control under the Atomic Energy Act The committee found that the current workable system allows licensees to release material according to pre established criteria but contains inconsistencies such that nuclear reactor licensees can release materials only if there is no detectable radioactivity above background levels whereas materials licensees can do so if small

detectable levels are found The committee evaluated technical analyses of the estimated doses of the final disposition of slightly radioactive solid materials These analyses were conducted by federal agencies and international organizations including the International Atomic Energy Agency IAEA the European Commission and other groups The Disposition Dilemma Controlling the Release of Solid Materials from Nuclear Regulatory Commission Licensed Facilities explains the committee's findings and recommendations

Radiation Carcinogenesis Arthur C. Upton, 1986 This book provides the first comprehensive and systematic survey of present knowledge about radiation carcinogenesis World experts review in detail current information on such topics as the incidence of various forms of cancer in irradiated populations the carcinogenic effects of ionizing radiation in laboratory animals theoretical mechanisms of radiation carcinogenesis and the implications of the data for assessing the risks of human cancer In view of recent controversy about the carcinogenic hazards of low level exposure to radiation and other carcinogens this book is a timely contribution toward our understanding of the carcinogenic risks of low level radiation
