Radiation In Medicine A Need For Regulatory Reform:

Radiation in Medicine Institute of Medicine, Committee for Review and Evaluation of the Medical Use Program of the Nuclear Regulatory Commission, 1996-04-25 Does radiation medicine need more regulation or simply better coordinated regulation This book addresses this and other questions of critical importance to public health and safety The issues involved are high on the nation s agenda the impact of radiation on public safety the balance between federal and state authority and the cost benefit ratio of regulation Although incidents of misadministration are rare a case in Pennsylvania resulting in the death of a patient and the inadvertent exposure of others to a high dose of radiation drew attention to issues concerning the regulation of ionizing radiation in medicine and the need to examine current regulatory practices Written at the request from the Nuclear Regulatory Commission NRC *Radiation in Medicine* reviews the regulation of ionizing radiation in medicine focusing on the NRC s Medical Use Program which governs the use of reactor generated byproduct materials The committee recommends immediate action on enforcement and provides longer term proposals for reform of the regulatory system The volume covers Sources of radiation and their use in medicine Levels of risk to patients workers and the public Current roles of the Nuclear Regulatory Commission other federal agencies and states Criticisms from the regulated community The committee explores alternative regulatory structures for radiation medicine and explains the rationale for the option it recommends in this volume Based on extensive research input from the regulated community and the collaborative efforts of experts from a range of disciplines *Radiation in Medicine* will be an important resource for federal and state policymakers and regulators health professionals involved in radiation treatment developers and producers of radiation equipment insurance providers and concerned laypersons

Subcommittee on Energy and Water Development, 1997 **Weekly Information Report** , 1996 Under the Radar Ellen Leopold, 2008-09-03 At the end of the Second World War a diagnosis of cancer was a death sentence Sixty years later it is considered a chronic disease rather than one that is invariably fatal Although survival rates have improved the very word continues to evoke a special terror and guilt inspiring scientists and politicians to wage war against it In Under the Radar Ellen Leopold shows how nearly every aspect of our understanding and discussion of cancer bears the imprint of its Cold War entanglement The current biases toward individual rather than corporate responsibility for rising incidence rates research that promotes treatment rather than prevention and therapies that can be patented and marketed all reflect a largely hidden history shaped by the Cold War Even the language we use to describe the disease such as the guiding metaphor for treatment fight fire with fire can be traced back to the middle of the twentieth century Writing in a lucid style Leopold documents the military governmental industrial and medical views of radiation and atomic energy to examine the postwar response to cancer through the prism of the Cold War She explores the role of radiation in cancer therapies today using case studies and mammogram screening in particular to highlight the surprising parallels Taking into account a wide array of disciplines this book challenges our understanding of cancer and how we approach its treatment Examines the postwar response to cancer through the prism of the Cold War Goes beyond medical science to look at the influence of Cold War policies on the way we

think about cancer today Links the experience of postwar cancer patients with the broader evolution of what have become cancer industries Traces the history of human made radiation as a state sponsored environmental toxin **Meningiomas**
