Forum,2016-04-16 In recent years the field of oncology has witnessed a number of technological advances including more precise radiation therapy and minimally invasive surgical techniques Three dimensional 3D stereotactic and proton beam radiation therapy as well as laparoscopy and robotic surgery can enhance clinician s ability to treat conditions that were clinically challenging with conventional technologies and may improve clinical outcomes or reduce treatment related problems for some patients Both patients and physicians seek access to these new technologies which are rapidly being adopted into standard clinical practice Such demand is often propelled by marketing that portrays the new technologies as the latest and greatest treatments available However evidence is often lacking to support these claims and these novel technologies usually come with higher price tags and are often used to treat patients who might have achieved similar benefits from less expensive conventional treatment The increased cost of novel treatments without adequate assessment of how they affect patient outcomes is a pressing concern given that inappropriate use of expensive technologies is one of the key factors that threaten the affordability of cancer care in the United States To explore these issues further the National Cancer Policy Forum NCPF of the Institute of Medicine organized a workshop in July 2015 This is the third NCPF workshop in a series examining the affordability of cancer care Participants explored clinical benefits and comparative effectiveness of emerging advanced technologies for cancer treatment in radiation therapy and surgery and potential strategies to assess the value and promote optimal use of new technologies in cancer treatment This report summarizes the presentations and discussions from the workshop

Röntgen Centennial A. Haase, Gottfried Landwehr, Eberhard Umbach, 1997 To honour W C Röntgen and review the entire area of X ray development in the various fields of natural technical and life sciences his successors at the Physikalisches Institut of the Universität Würzburg organized a conference named Röntgen Centennial It took place at the new Physikalisches Institut not far from the historical site shortly before the actual 100th anniversary of the discovery Over forty renowned scientists were invited as representative speakers in the various subfields of X ray activities They reviewed the development gave examples and described the present status Most of them provided survey articles which are gathered in this book Since most X ray related activities are somehow represented an almost complete overview of the entire field is provided This book thus represents the enormous breadth of X ray activities and allows one to recognize the potential and quality of today s X ray research

Machine Learning and Artificial Intelligence in Radiation Oncology Barry S. Rosenstein, Tim Rattay, John Kang, 2023-12-02 Machine Learning and Artificial Intelligence in Radiation Oncology A

Guide for Clinicians is designed for the application of practical concepts in machine learning to clinical radiation oncology. It addresses the existing void in a resource to educate practicing clinicians about how machine learning can be used to improve clinical and patient centered outcomes. This book is divided into three sections: the first addresses fundamental concepts of machine learning and radiation oncology detailing techniques applied in genomics; the second section discusses translational opportunities such as in radiogenomics and autosegmentation; and the final section encompasses current clinical applications in clinical decision making, how to integrate AI into workflow, use cases, and cross collaborations with industry. The book is a valuable resource for oncologists, radiologists, and several members of the biomedical field who need to learn more about machine learning as a support for radiation oncology. Presents content written by practicing clinicians and research scientists allowing a healthy mix of both new clinical ideas as well as perspectives on how to translate research findings into the clinic. Provides perspectives from artificial intelligence (AI) industry researchers to discuss novel theoretical approaches and possibilities on academic collaborations. Brings diverse points of view from an international group of experts to provide more balanced viewpoints on a complex topic.

Informatics in Radiation Oncology George Starkschall, R. Alfredo C. Siochi, 2013-09-05. Reflecting the increased importance of the collaborations between radiation oncology and informatics professionals, *Informatics in Radiation Oncology* discusses the benefits of applying informatics principles to the processes within radiotherapy. It explores how treatment and imaging information is represented, stored, and retrieved, as well as how this information relates to other patient data. The book deepens your knowledge of current and emerging information technology and informatics principles applied to radiation oncology so that all the data gathered from laboratory results to medical images can be fully exploited to make treatments more effective and processes more efficient. After introducing the basics of informatics and its connection to radiation oncology, the book examines the process of healthcare delivery in radiation oncology, the challenges of managing images in radiotherapy, and the burgeoning field of radiogenomics. It then presents teaching clinical trials and research tools and describes open access clinical imaging archives in radiotherapy techniques for maximizing information from multimodality imaging and the roles of images in treatment planning. It also looks at how informatics can improve treatment planning, the safety and efficiency of delivery systems, image-guided patient positioning, and patient assessment. The book concludes with discussions on how outcomes modeling evaluates the effectiveness of treatments, how quality control informatics improves the reliability of processes, and how to perform quality assurance on the informatics tools. With contributions from a host of top international experts in radiation oncology, medical physics, and informatics, this book leads the way in moving the field forward. It encourages you to find new ways of applying informatics to radiation oncology and help your patients in their fight against cancer.
