Environmental Security and Environmental Management: The Role of Risk Assessment Benoit Morel, Igor Linkov, 2007-05-22 The concept of environmental security has emerged as one basis for understanding international conflicts This phrase can mean a variety of things It can signify security issues stemming from environmental concerns or conflicting needs or it can mean that the environment is treated as a resource for the long term and the question is what should be done today to preserve the quality of the environment in the future In the same way that energy security is about ensuring access to energy for the long run it can also mean that pressing environmental concerns create a situation where different countries and communities are forced to collaboratively design a unified response even if cooperation is not generally in the logic of their relations Over the last several years the authors of this book and their colleagues have tried to demonstrate the power of risk assessment and decision analysis as valuable tools that decision makers should use for a broad range of environmental problems including environmental security Risk analysis is almost more a state of mind or a way of looking at problems than

it is a kind of algorithm or a set of recipes It projects a kind of rationality on problems and forces a certain degree of quantitative rigor as opposed to the all too common tendency of making environmental recommendations based on anecdotal evidence Capacity Building in the Fight Against Terrorism IOS Press,2013-09-18 The fight against terrorism is constantly in the news and NATO has committed to the mission of counterterrorism as a central role of the alliance This is a mission which requires the maximum cooperation of all NATO members and partners and the sharing of knowledge and expertise is crucial to its success This book presents the proceedings of the NATO Centre of Excellence Defence against Terrorism COE DAT Advanced Training Course Capacity Building in the Fight against Terrorism held in Bishkek Kyrgyzstan in June 2012 The presentations were delivered by 11 expert practitioners and academics from eight countries The subjects covered include an overview of terrorism NATO s approach to defence against terrorism weapons of mass destruction terrorism eco terrorism religion and the question of violence as well as energy and environmental security international cooperation human rights use of the internet crisis management finance recruitment and prejudice perception management as they relate to the fight against terrorism This book will be of interest to all those wishing to maintain an awareness of the current situation as regards terrorism and counter terrorism worldwide The British National Bibliography Arthur James Wells,2004

Dynamic Earth Environments Kamlesh P. Lulla, Lev V. Dessinov, 2000 The U S Russian collaboration that used the Space Shuttle and the Mir Space Station as platforms for acquiring remote sensing information about the Earth between 1996 and 1998 produced significant scientific results on hydrology land use and changes in some of the Earth s most dynamic environments Many of these outstanding images are presented here and compared with photographs taken during earlier missions allowing detection of changes on the Earth s surface Studies reported in this fascinating volume include observations of El Ni o related phenomena fluctuating water levels of the Caspian and Aral Seas smoke dust and aerosols in the atmosphere urban land use changes and drought in the southeastern United States and Mexico This valuable information and the techniques used to gather it will form the basis for future remote sensing studies to be conducted from the International Space Station Nuclear Radioactive Materials in the Oil and Gas Industry Khalid Alnabhani, Faisal Khan, 2019-08-31 Nuclear Radioactive Materials in the Oil and Gas Industry comprehensively discusses the TENORMs generated from various types of oil and gas processes and their associated adverse human health effects effective TENORM waste management strategies and the quantitative risk analysis The book thoroughly investigates current knowledge addressing the three main gaps identified in available studies 1 Exposure to radioactivity 2 High volume waste as a source of radiation exposure and 3 A lack of uniform international safety regulations This book offers researchers scientists and graduate and undergraduate students a comprehensive and well researched reference that covers fundamental concepts problem identification and solutions development It is an ideal comprehensive guideline for professionals involved in the oil and gas and nuclear industries who are concerned about radiological issues **Environmental Protection Against**

Radioactive Pollution N. Birsen, Kairat K. Kadyrzhanov, 2012-12-06 NATO Advanced Research Workshop Environmental Protection Against Radioactive Pollution was held in Almaty on September 16-19 2002. Experts from Azerbaijan, Denmark, Hungary, Kazakhstan, Kyrgyzstan, Norway, Russia, Tajikistan, Turkey, Ukraine, USA, Uzbekistan, and the IAEA have participated and made presentations. The Workshop was organized parallel to the 2nd Eurasia Conference on Nuclear Science and its Application held in Almaty on September 16-19 2002 that was organized by Institute of Nuclear Physics of Kazakhstan with Turkish Atomic Energy Authority and National Academy of Science of Azerbaijan, National Academy of Science of Kyrgyzstan, Institute of Nuclear Physics of Uzbekistan. So the number of participants for the Workshop was rather high. The NATO Advanced Research Workshop generated important interactions and provided a mechanism for scientists of different nations and of varied disciplines to discuss challenges that confront many countries around the world. The reports presented at the Workshop were published in this NATO Science Series. The main directions of the presented reports were as follows: General estimation of the radioactive contamination of the territories and radiation hazardous objects including former military test sites, areas influenced due to Chernobyl and Mayak accidents and territories of oil fields; Techniques and procedures of radioecological monitoring; Techniques of determination of radionuclide concentrations and its species in the environment.

New Techniques for the Detection of Nuclear and Radioactive Agents Gul Asiye Aycik, 2009-01-25 Nuclear and radioactive agents are considerable concerns especially after the early 1990s and more attention has been focused on the radiation detection technologies. This book comprises the selected presentations of NATO Advanced Training Course held 26-30 May 2008 in Mugla, Turkey. The contributions represent a wide range of documents related to control, monitoring and measurement methods of nuclear radioactive isotopes and agents for both fundamental and applied works dealing with their use for different purposes. This book presents environmental data from many locations of different countries and also contains the contributions in the detection monitoring programs of some authors from CIS countries. The basic goal of this book is to deal with recent developments and applications of environmental monitoring and measurement techniques of environmental radionuclides and nuclear agents as well as the auxiliary techniques. The many recent examples contributed by authors will be useful in monitoring measurement studies of radioactive nuclear agents in the present environment and can help not only in carrying out outdoor and laboratory experiments but also in protection of possible sources of radionuclides and nuclear agents. Especially the contributions of experts and specialists involved in this book assured the highest level of knowledge in the field of techniques for the detection of radioactive and nuclear agents. *The Caspian Sea* William Ascher, Natalia Mirovitskaya, 2012-12-06 This volume is based on the presentations and deliberations of an Advanced Research Workshop ARW Caspian Sea: A Quest for Environmental Security that was held on March 15-19 1999 in Venice, Italy. Howard, Michael J. Friedel, Antonio Chambel, 2011-05-29 National and global security can be assessed in many ways but one underlying factor for all humanity is access to reliable sources of water for drinking sanitation food production and manufacturing industry In many parts of the world population growth and an escalating demand for water already threaten the sustainable management of available water supplies Global warming climate change and rising sea level are expected to intensify the resource sustainability issue in many water stressed regions of the world by reducing the annual supply of renewable fresh water and promoting the intrusion of saline water into aquifers along sea coasts where 50% of the global population reside Proactive resource management decisions are required but such efforts would be futile unless reliable predictions can be made about the impact of the changing global conditions on the water cycle and the quality and availability of critical water reserves Addressing this wide spectrum of issues a team of expert authors discusses here the impacts of climate change on the global water resources the long term resource management goals at global and local scales
