Wong, 2020-12-08 This book reviews locoregional radionuclide cancer therapies LRCT Proving an increasingly viable alternative to radiotherapy radionuclide therapy includes a diversity of choices of well characterized biochemical and physiologic target molecules The delivery and retention of radionuclides may be monitored by advanced imaging for exact tissue localization and for real time dosimetry to enable personalized precision medicine Radiopharmaceuticals in human cancer therapies are typically delivered in systemic routes but can also be designed for locoregional routes to harness pharmacokinetic advantages of higher payload and lower systemic toxicities This book explores the latest advancements and clinical considerations of the locoregional approach Throughout the chapters the clinical and scientific bases of cancer treatment and the locoregional use of radionuclides are explored Mathematical models of radiation dosimetry of locoregional radionuclides on tissues are studied using common models for multiple commercially available radionuclides Rodent and canine tumor models of LRCT are compared for selected radionuclides and radiopharmaceuticals The practical aspects of radiopharmaceuticals production marketing transport as well as radiation protection are reviewed Finally the combination of LRCT with immunotherapy and other cancer therapies and prospective future use of LRCT are discussed This is a guide for practicing nuclear physicians interventional radiologists radiation oncologists radiation scientists veterinarians and oncologists to expand their knowledge base and to prepare for designing locoregional radionuclide cancer therapies in animals and in humans **Theranostics, Gallium-68, and Other Radionuclides** Richard P. Baum, Frank Rösch, 2012-08-23 This book is based on contributions presented at the 1st World Congress on Gallium 68 and Peptide Receptor Radionuclide Therapy which examined recent developments in theranostics the emerging field of molecular targeting of vectors that can be used for both diagnosis and therapy when modified accordingly The focus of this book is on the rapidly developing research into and clinical applications of gallium 68 and other generator produced PET radionuclides in the personalized diagnosis and treatment of neuroendocrine tumors and other diseases In addition new PET radiopharmaceuticals are considered and the latest ideas and concepts presented Theranostics embodies both molecular and personalized medicine It is at the cutting edge of medicine and the contents of this volume will be of interest to chemists physicians and investigators dealing with generators PET radiochemistry molecular imaging and radionuclide therapy

Diagnostic Nuclear Medicine and Radionuclide Therapy Stefano Fanti, Egesta Lopci, 2016-05-20 Nuclear medicine is a medical imaging specialty involving the use of radioactive compounds for diagnostic and therapeutic purposes. As a medical branch, it is considered part of Diagnostic Imaging but differs substantially from Radiology with respect to the source of the radiation made visible by the diagnostic devices. Nuclear medicine adopts also some types of radioactive emissions for therapeutic purposes, allowing the employment of the metabolic properties of the radiopharmaceuticals for the cure of certain clinical conditions and malignant diseases. Nuclear medicine is a relatively recent discipline and owes its origins to the discovery of natural radioactivity and the development of the first instruments for medical diagnostics. From the introduction of the first gamma camera of Anger, the technology has greatly improved. The evolution has led to the development of SPECT and PET technology and in the recent years to the introduction of hybrid tomographs allowing the combination in one session of both functional and morphological images. The purpose of this textbook is to illustrate synthetically the principals of nuclear medicine diagnostics with reference both to the technical part and main clinical indications. The booklet is addressed primarily to the degree courses for technologists but can be reasonably used in other courses and medical training programs where there is necessity for relatively simple yet complete and clinically relevant concepts of nuclear medicine discipline. As a complement, the manuscript will end with a dedicated section summarizing some concepts of nuclear medicine therapy.

Therapeutic Nuclear Medicine Richard P. Baum, 2014-08-16 The recent revolution in molecular biology offers exciting new opportunities for targeted radionuclide therapy. This up-to-date comprehensive book, written by world-renowned experts, discusses the basic principles of radionuclide therapy, explores in detail the available treatments, explains the regulatory requirements, and examines likely future developments. The full range of clinical applications is considered, including thyroid cancer, hematological malignancies, brain tumors, liver cancer, bone and joint disease, and neuroendocrine tumors. The combination of theoretical background and practical information will provide the reader with all the knowledge required to administer radionuclide therapy safely and effectively in the individual patient. Careful attention is also paid to the role of the therapeutic nuclear physician in coordinating a diverse multidisciplinary team which is central to the safe provision of treatment.

Medical Radionuclides: Radiation Dose and Effects Roger J. Cloutier, C. Lowell Edwards, Walter Stephen Snyder, 1970

Textbk Radiopharmacy C. B. Sampson, 1994-03-01 This second edition now includes practical information on drug enhancement of nuclear medicine studies, radiopharmaceuticals as therapeutic agents, pharmacokinetics, and a section on current radiopharmaceutical research. This book begins with the basic scientific principles of radiation physics, generator systems, and preparation of radiopharmaceuticals. It deals with methods of localization of radiopharmaceuticals such as lung deposition, ion exchange, membrane transportation, phagocytosis, and pinocytosis. The important role of radiolabelling blood components is reviewed. The latest information on factors affecting biodistribution, adverse and unusual reactions, the integrity of radiopharmaceuticals, and dosimetry is also included. There is

also a section on new radiopharmaceuticals The final chapter on paediatric radiopharmacy deals with the preparation of doses for children methods of calculating doses and documentation
