Chin, William F. Regine, 2010-05-05 Principles of Stereotactic Radiosurgery is the only contemporary comprehensive reference for neurosurgeons and radiation oncologists using Gamma Knife and Linear Accelerator technology Each chapter includes specific case presentations representative of the most commonly treated conditions including applications for spinal disorders Chapters conclude with counterpoint experiences oriented to treatment options other than radiosurgery i e medical management standard surgery These counterpoint discussions are written by noted experts and address in greater detail the indications results and complications of their approach and enable readers to improve decision making with regard to

choosing treatment options for their own patients Also included is information on important non surgical aspects of radiosurgery including site construction regulatory and billing issues legal concerns and nursing care issues The editors have treated over 3000 patients using this technology and international contributors share their experience as well

New Trends in Management of Cerebro-Vascular Malformations Alberto Pasqualin,Renato Da Pian,2012-12-06 Every so often a gathering of minds and experience occurs that results in an all encompassing overview in depth of such a vast subject as Cerebro Vascular Malformations as occurred in Verona in June 1992 and which warrants publication Professors Da Pian and Pasqualin deserve high compliment and it is a measure of the respect in which they are held that virtually all those most knowledgeable around the world attended presented their work and thoughts and contributed to intense discussion Ljunggren s opening historical survey set the stage and must be the most comprehensive yet published Subarachnoid hemorrhage from aneurysm rupture still constitutes I dare say the most difficult problem for neurosurgeons in relief of the brain injury and arterial reaction and the technical perfection of aneurysm obliteration even for small as well as large and giant sacs Very large high flow A VMs can be as demanding too The bulk of the conference was devoted to subarachnoid hemorrhage aneurysms and A VMs which were discussed under about 14 headings each But vein of Galen malformations dural A VMs cavernous angiomas and venous angiomas renamed developmental venous anomalies came under scrutiny not always with consensus Trends are perceptible such as fibrinolysis of subarachnoid clot non surgery for Galenic and dural malformations the benignity of venous angioma but there is still much variation in approach pharmacologically technically and with such as the evolving endovascular and radiosurgical stories used alone or in conjunction

Advances in Radiosurgery Christer Lindquist,Douglas Kondziolka,2012-12-06 Radiosurgery is a rapidly developing form of minimally invasive neurosurgery Selected papers from the first meeting of the International Stereotactic Radiosurgery Society in Stockholm June 1993 reflect current multidisciplinary approaches to difficult intracranial neurosurgical problems Neurosurgeons radiotherapists oncologists radiobiologists physicists and representatives of several other clinical disciplines inform about the state of the art of radiosurgical treatment of a multitude of intracranial problems such as arteriovenous malformations pituitary and pineal tumors vestibular schwannomas as well as metastatic brain tumors and gliomas

Advances and Technical Standards in Neurosurgery L. Symon,L. Calliauw,F. Cohadon,J. Lobo Antunes,F. Loew,H. Nornes,E. Pásztor,J. D. Pickard,A. J. Strong,M. G. Yaşargil,2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series devoted to Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies This series was first discussed 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina the founding fathers of the series being Jean Brihaye Bernard Pertuiset Fritz Loew and Hugo Krayenbühl Thus were established the principles of European co operation which have been born from the European spirit flourished in the European Association and have

throughout been associated with this series The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding Therefore we have decided to publish all contributions in English regardless of the native language of the authors All contributions are submitted to the entire editorial board before publication of any volume Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made The contributions are written by specialists in the given fields and constitute the first part of each volume

Advances in Stereotactic and Functional Neurosurgery 10 Björn A. Meyerson, Giovanni Broggi, Jose Martin-Rodriguez, Christoph

Ostertag, Marc Sindou, 2013-06-29 These proceedings from the Xth Congress of the European Society for Stereotactic and

Functional Neurosurgery in Stockholm reflect the growing interest in these fields of neurosurgery It is the most extensive volume in this series of publications and it contains a large number of original articles pertaining to the most recent advances in stereotactic and functional neurosurgery Not long ago stereotactic neurosurgery was considered an esoteric sub speciality practised only by those involved in treating movement disorders and pain In the last decade we have witnessed the incorporation of stereotactic methodology in the management of common neurosurgical diseases and the stereotactic technique is now practised in all major neurosurgical centers As with other surgical techniques and tools however the utilization of stereotactic methods requires special knowledge and training This book comprises articles which give insight into new stereotactic applications and technology For example the usage of stereotaxis without a frame and the so called navigator systems in open tumor surgery is dealt with in two papers The introduction and development of radiosurgery is closely linked to the advancement of stereotactic technique Radiosurgical treatment of tumors and cerebrovascular diseases has been one of major achievements in modern neurosurgery This publication contains several original reports illustrating the efficacy of radiosurgery in problematic neurosurgical diseases

Molecular Neuro-oncology and Its Impact on the Clinical Management of Brain Tumors O.D. Wiestler, U. Schlegel, J. Schramm, 2012-12-06 Tumors of the nervous system represent a difficult therapeutic challenge During recent years substantial progress has been made in characterizing genetic mechanisms involved in the formation of brain tumors There is a lot of hope that an understanding of the molecular basis of transformation will eventually lead to specific therapeutic approaches In this volume leading authorities in both molecular and clinical neuro oncology summarize recent developments in their respective fields The first part of the book will focus on specific molecular genetic defects in neural tumors and their potential clinical significance Part two gives an update on established and novel treatment regimens for patients with brain tumors Several contributions will demonstrate that molecular and clinical neuro oncology are already entangled With its unique combination of molecular biological and clinical data this volume provides basic researchers and clinical neuroscientists with a comprehensive update in both disciplines

Current Concepts in Uveal Melanoma L. Desjardins, T. Kivelä, B.E. Damato, M.J. Jager, 2011-10-24 Uveal melanoma is an aggressive form of cancer that can involve the iris the ciliary body and or the choroid which is the main location of this tumor Patients often wish to be informed about treatment choices and the results of different approaches Important current clinical questions are whether a biopsy should

be taken of choroidal melanomas what should be done with this biopsy and whether high risk patients should be screened regularly This volume describes the clinical characteristics of uveal melanoma along with the different current techniques available for treatment such as radioactive plaque treatment proton beam therapy and local tumor resection Furthermore techniques for taking biopsies and characterizing biopsy material are demonstrated Future therapies such as anti VEGF treatment and options for the treatment of metastases are also discussed Residents with an interest in ocular oncology ophthalmologists or physicians dealing with uveal melanoma as well as patients wishing to know more about this malignancy will find a topical update on uveal melanoma in this publication

Radiochromic Film Indra J. Das, 2017-10-30 This book provides a first authoritative text on radiochromic film covering the basic principles technology advances practical methods and applications It focuses on practical uses of radiochromic film in radiation dosimetry for diagnostic x rays brachytherapy radiosurgery external beam therapies photon electron protons stereotactic body radiotherapy intensity modulated radiotherapy and other emerging radiation technologies The expert authors address basic concepts advantages and the main applications including kilovoltage brachytherapy megavoltage electron beam proton beam skin dose in vivo dosimetry postal and clinical trial dosimetry The final chapters discuss the state of the art in microbeam synchrotron radiation and ultraviolet radiation dosimetry

Practical Handbook of Neurosurgery Marc Sindou, 2009-11-06 Practical Handbook of Neurosurgery invites readers to take part in a journey through the vast field of neurosurgery in the company of internationally renowned experts At a time when the discipline is experiencing a detrimental tendency to segment into various subfields and scatter in the process it can be worthwhile to collect a number of practical lessons gleaned from experienced and leading neurosurgeons The book also aims to present numerous important figures in the neurosurgical community with a brief overview of the vitae and main contributions for each We must confess that we were sad that some of the most active members were unable to participate likely due to time constraints We are however fortunate that the majority were able to take part As such though not exhaustive the book does represent an anthology of contemporary neurosurgeons From the preface At the very beginning of the project our intention was to make a poetbook But month after month it became obvious that the work would be much more expansive ultimately we produced three volumes Nevertheless we hope that all the three volumes together will remain easily accessible and a daily companion The pocket has to be more like a travel bag We would like to thank all of the contributors they have sacrificed their valuable time to deliver sound and critical views and above all useful guidelines

Stereotactic Neuro-Radio-Surgery Wolfgang Koos, Bernd Richling, 2012-12-06 During the last few years stereotactic radiosurgery has become a partner of equal rank within the discipline of neurosurgery Today it is regarded as being of the same importance as microsurgery and endovascular neurosurgery branches which have also progressed rapidly in recent years Breakthrough success however requires a combined effort of all partners involved The editors have brought together leading experts in the fields of neurosurgery

neuroradiology neurology neuropathology neuroanatomy radiation oncology and biophysics to discuss indications and therapeutic strategies in the treatment of arteriovenous malformations and intracranial tumors and to find a common basis for their future work

Youmans and Winn Neurological Surgery E-Book H. Richard Winn, 2022-01-21 Widely regarded as the definitive reference in the field Youmans and Winn Neurological Surgery offers unparalleled multimedia coverage of the entirety of this complex specialty Fully updated to reflect recent advances in the basic and clinical neurosciences the 8th Edition covers everything you need to know about functional and restorative neurosurgery deep brain stimulation stem cell biology radiological and nuclear imaging and neuro oncology as well as minimally invasive surgeries in spine and peripheral nerve surgery and endoscopic and other approaches for cranial procedures and cerebrovascular diseases In four comprehensive volumes Dr H Richard Winn and his expert team of editors and authors provide updated content a significantly expanded video library and hundreds of new video lectures that help you master new procedures new technologies and essential anatomic knowledge in neurosurgery Discusses current topics such as diffusion tensor imaging brain and spine robotic surgery augmented reality as an aid in neurosurgery AI and big data in neurosurgery and neuroimaging in stereotactic functional neurosurgery 55 new chapters provide cutting edge information on Surgical Anatomy of the Spine Precision Medicine in Neurosurgery The Geriatric Patient Neuroanesthesia During Pregnancy Laser Interstitial Thermal Therapy for Epilepsy Fetal Surgery for Myelomeningocele Rehabilitation of Acute Spinal Cord Injury Surgical Considerations for Patients with Polytrauma Endovascular Approaches to Intracranial Aneurysms and much more Hundreds of all new video lectures clarify key concepts in techniques cases and surgical management and evaluation Notable lecture videos include multiple videos on Thalamotomy for Focal Hand Dystonia and a video to accompany a new chapter on the Basic Science of Brain Metastases An extensive video library contains stunning anatomy videos and videos demonstrating intraoperative procedures with more than 800 videos in all Each clinical section contains chapters on technology specific to a clinical area Each section contains a chapter providing an overview from experienced Section Editors including a report on ongoing controversies within that subspecialty Enhanced eBook version included with purchase Your enhanced eBook allows you to access all of the text figures and references from the book on a variety of devices

Neurosurgery of Arteriovenous Malformations and Fistulas Robert Schmid-Elsaesser, Alexander Muacevic, Hartmut Brückmann, Berndt Wowra, 2012-12-06 Arteriovenous malformations AVM and fistulas AVF differ from all other pathology affecting the central nervous system by their high flow arteriovenous shunts Permanent occlusion of these shunts is the essence and the challenge of therapy Much progress has been made since the first neurosurgical efforts to deal with these problems Endovascular therapy and radiosurgery became accepted alternatives or adjuncts to surgery In many instances the choice of the primary therapeutic modality is not clear and arguments can be found for several options However microsurgery endovascular therapy and radiosurgery differ very much with regard to invasiveness length of stay at the hospital but also residual risk after therapy

These secondary factors are often decisive for the choice of treatment modality The book presents in a clearly structured way the modern treatment concepts It has been written for all colleagues involved in surgery radiosurgery and endovascular therapy of neurovascular malformations Intracranial Stereotactic Radiosurgery Jason P. Sheehan,2021-12-22 In this third edition of Intracranial Stereotactic Radiosurgery Drs Sheehan and Lunsford provide an updated assessment of the practice of stereotactic radiosurgery Topics include benign and malignant tumors cerebrovascular abnormalities and functional disorders Several new topics are now included and focus on immunotherapy hypofractionation and repeat radiosurgery Each chapter contains key figures and tables to illustrate the critical concepts of the work Contributors to the book represent many of the most prestigious stereotactic radiosurgery centers across the world This book is comprised of 36 chapters and represents a comprehensive update to prior editions It is intended to be a readable credible and accessible reference on stereotactic radiosurgery Editors Jason Sheehan MD PhD FACS FAANS is the Vice Chair and Harrison Distinguished Professor of Neurological Surgery at the University of Virginia UVA He also serves as the Neurosciences Service Line Director at UVA Dr Sheehan is the current chair of the American Association of Neurological Surgeons AANS and Congress of Neurological Surgeons CNS Section on Tumors He serves as the Editor In Chief of the Journal of Neuro Oncology L Dade Lunsford MD serves as the Lars Leksell Professor and Distinguished Professor at the Department of Neurological Surgery at the University of Pittsburgh He is also director of the Center for Image Guided Neurosurgery at the University of Pittsburgh Medical Center and an internationally recognized authority on stereotactic surgery radiosurgery and minimally invasive surgery He has authored or coauthored more than 1 000 scientific reports and 16 books Endovascular Neurosurgery Paul Butler,2013-03-09 Endovascular Neurosurgery represents a unique collaboration between contributors from a number of specialties all of whom are concerned with the management of cerebrovascular disease This provides a balanced account of the efficacy of interventional endovascular techniques in this group of conditions As a result Endovascular Neurosurgery will prove an invaluable account of a relatively new specialty and will be essential reading for neurosurgeons neurologists neuroradiologists neurophysiologists and neuroanaesthetists
