Darwin and the Emergence of Evolutionary Theories of Mind and Behavior Robert J. Richards,2014-06-01 With insight
 and wit Robert J Richards focuses on the development of evolutionary theories of mind and behavior from their first distinct

appearance in the eighteenth century to their controversial state today. Particularly important in the nineteenth century were Charles Darwin's ideas about instinct, reason and morality which Richards considers against the background of Darwin's personality, training, scientific and cultural concerns and intellectual community. Many critics have argued that the Darwinian revolution stripped nature of moral purpose and ethically neutered the human animal. Richards contends however that Darwin, Herbert Spencer and their disciples attempted to reanimate moral life believing that the evolutionary process gave heart to unselfish altruistic behavior. Richards's book is now the obvious introduction to the history of ideas about mind and behavior in the nineteenth century. Mark Ridley, *Times Literary Supplement*. Not since the publication of Michael Ghiselin's *The Triumph of the Darwinian Method* has there been such an ambitious challenging and methodologically self-conscious interpretation of the rise and development of evolutionary theories and Darwin's role therein. John C. Greene, *Science*. His book triumphantly achieves the goal of all great scholarship: it not only informs us but shows us why becoming thus informed is essential to understanding our own issues and projects. Daniel C. Dennett, *Philosophy of Science*.

Mental Evolution in Man George John Romanes, 2015-11-05

In now carrying my study of mental evolution into the province of human psychology it is desirable that I should say a few words to indicate the scope and intention of this the major portion of my work. For it is evident that *Mental Evolution in Man* is a subject comprehending so enormous a field that unless some lines of limitation are drawn within which its discussion is to be confined no one writer could presume to deal with it. The lines then which I have laid down for my own guidance are these: My object is to seek for the principles and causes of mental evolution in man first as regards the origin of human faculty and next as regards the several main branches into which faculties distinctively human afterwards ramified and developed. In order as far as possible to gain this object it has appeared to me desirable to take large or general views both of the main trunk itself and also of its sundry branches. Therefore I have throughout avoided the temptation of following any of the branches into their smaller ramifications or of going into the details of progressive development. These I have felt are matters to be dealt with by others who are severally better qualified for the task whether their special studies have reference to language, archæology, technicology, science, literature, art, politics, morals or religion. But in so far as I shall subsequently have to deal with these subjects I will do so with the purpose of arriving at general principles bearing upon mental evolution rather than with that of collecting facts or opinions for the sake of their intrinsic interest from a purely historical point of view. Finding that the labour required for the investigation even as thus limited is much greater than I originally anticipated it appears to me undesirable to delay publication until the whole shall have been completed. I have therefore decided to publish the treatise in successive instalments of which the present constitutes the first. As indicated by the title it is concerned exclusively with the Origin of Human Faculty. Future instalments will deal with the Intellect, Emotions, Volition, Morals and Religion. It will however be several years before I shall be in a position to publish these succeeding instalments notwithstanding that some of them are already far advanced. To be continued in this ebook.
