ing their geometrical relationships. Figure 25-2 illustrates two surfaces that subtend the same solid angle. An ideal luminous source (a point source) will radiate in all directions. Therefore, at any distance r from the source one may create a sphere of radius r . The surface area of a sphere is $4\pi r^2$. A steradian (sr) is a solid angle subtended by a portion of the spher-

ical area equal to r^2 . Therefore, there are 4π steradians in a sphere.

As light radiates from the source, the amount of light (*luminous flux* or power, Φ) passing through one steradian is always the same, as can be seen for the two surfaces in Figure 25-2. If the point source has a luminance of 1 candela (cd), the luminous flux

A Taxonomy of Visual Processes William R. Uttal, 2014-06-27 Originally published in 1981 this third volume deals with the empirical data base and the theories concerning visual perception the set of mental responses to photic stimulation of the eyes As the book develops the plan was to present a general taxonomy of visual processes and phenomena It was hoped that such a general perspective would help to bring some order to the extensive but largely unorganized research literature dealing with our immediate perceptual responses to visual stimuli at the time The specific goal of this work was to provide a classification system that integrates and systematizes the data base of perceptual psychology into a comprehensive intellectual scheme by means of an eclectic multi level metatheory invoking several different kinds of explanation

Solar and Infrared Radiation Measurements, Second Edition Frank Vignola, Joseph Michalsky, Thomas Stoffel, 2019-07-30 The rather specialized field of solar and infrared radiation measurements has become increasingly important due to the increased demands by the renewable energy and climate change research communities for data with higher accuracy and increased temporal and spatial resolutions Recent advances in radiometry measurement systems and information dissemination also have increased the need for refreshing the literature available for this topic This book provides the reader with an up to date review of the important aspects of solar and infrared radiation measurements radiometer design equipment installation operation maintenance and calibration data quality assessment parameters and the knowledge necessary to properly interpret and apply the measured data to a variety of topics Each of the authors has more than 40 years of experience with this subject primarily as the result of developing and operating multiple measurement stations working with the industry to improve radiometry and conducting various research projects The book's scope and subject matter have been designed to help a wide audience gain a general understanding of this subject and to serve as a technical reference A student new to the field will benefit from the review of terminology and the historical perspective for radiometry before addressing more detailed topics in radiometry that we hope will be of
