Radiation In A Cloudy Atmosphere:

Radiation in a Cloudy Atmosphere E.M. Feigelson, 1984-07-31 Radiative heat transfer is a fundamental factor in the energetics of the terrestrial atmosphere the system consisting of the atmosphere and the underlying layer is heated by the Sun and this heating is compensated on the average by thermal radiation Only over a period of 1-3 days from some specified initial moment can the dynamic processes in the atmosphere be considered to be adiabatic Global dynamic processes of long duration are regulated by the actual influxes of heat one of the main ones being the radiative influx Radiation must be taken into account in long term weather forecasting and when considering the global circulation of the atmosphere the theory of climate etc Thus it is necessary to know the albedo of the system the amount of solar radiation transmitted by the atmosphere the absorptivity of the atmosphere vis a vis solar radiation and also the effective radiation flux the divergence of which represents the radiative cooling or heating All these quantities have to be integrated over the wavelength spectrum of the solar or thermal radiation and they must be ascertained as functions of the determining factors The relationships between the indicated radiation characteristics the optical quantities directly determining them the optically active components of the atmosphere and the meteorological fields will be discussed in this book

Radiative Transfer in a Cloudy Atmosphere R. E. Samuelson, 1965 The equation of radiative transfer in the context of a partially thermally emitting partially anisotropically scattering plane parallel cloudy atmosphere is derived The derivation allows an exact interpretation of the auxiliary quantities in the equation of transfer in terms of the Mie scattering parameters Explicit solutions are given the method of discrete ordinates in accordance with Chandrasekhar's procedure and extended to include thermal emission at infrared wavelengths Solutions of this type restricted to plane parallel layers bounded on both sides by a vacuum and characteristic of phase function for single scattering independent of optical depth are referred to as solutions to the restricted problem To extend the treatment to the general problem a procedure wherein layers with different scattering properties are combined is developed in terms of the restricted solutions two explicit examples are worked out Such quantities as the angular distribution of outgoing radiation and the net outgoing flux are consequences of these solutions

3D Radiative Transfer in Cloudy Atmospheres Alexander Marshak, Anthony Davis, 2006-05-27 Developments in three dimensional cloud radiation over the past few decades are assessed and distilled into this contributed volume Chapters are authored by subject matter experts who address a broad audience of graduate students researchers and anyone interested in cloud radiation processes in the solar and infrared spectral regions After two introductory chapters and a section on the fundamental physics and computational techniques the volume extensively treats two main application areas the impact of clouds on the Earth's radiation budget which is an essential aspect of climate modeling and remote observation of clouds especially with the advanced sensors on current and future satellite missions

Radiation and Cloud Processes in the Atmosphere Kuo-Nan Liou, 1992 This is an up to date treatment of atmospheric science and the key roles of solar radiation

and cloud layers *Storm and Cloud Dynamics* William R. Cotton, Richard A. Anthes, 1992-10-02 This book focuses on the dynamics of clouds and of precipitating mesoscale meteorological systems Clouds and precipitating mesoscale systems represent some of the most important and scientifically exciting weather systems in the world These are the systems that produce torrential rains severe winds including downburst and tornadoes hail thunder and lightning and major snow storms Forecasting such storms represents a major challenge since they are too small to be adequately resolved by conventional observing networks and numerical prediction models Key Features Key Highlights of This Text Provides a complete treatment of clouds integrating the analysis of air motions with cloud structure microphysics and precipitation mechanics Describes and explains the basic types of clouds and cloud systems that occur in the atmosphere fog stratus stratocumulus altocumulus altostratus cirrus thunderstorms tornadoes waterspouts orographically induced clouds mesoscale convection complexes hurricanes fronts and extratropical cyclones Presents a photographic guide presented in the first chapter linking the examination of each type of cloud with an image to enhance visual retention and understanding Summarizes the fundamentals both observational and theoretical of atmospheric dynamics thermodynamics cloud microphysics and radar meteorology allowing each type of cloud to be examined in depth Integrates the latest field observations numerical model simulations and theory Supplies a theoretical treatment suitable for the advanced undergraduate or graduate level

Theoretical Fundamentals of Atmospheric Optics Yu. M. Timofeyev, A. V. Vasil'ev, 2008 The book describes the theoretical fundamentals of atmospheric optics as a science of propagation transformation and generation of electromagnetic radiation in the atmosphere from ultraviolet to microwave radiation The main characteristics of the planets of the solar system and their atmospheres are given The equation of the transfer of radiation in different spectral ranges absorption of radiation by atmospheric gases and aerosol molecular aerosol and other types of nonresonant scattering atmospheric refraction reflection of radiation from the surface and glow of the atmosphere are discussed Methods of calculating radiation for the solar and thermal range of the spectrum are outlined Problems of radiation energetics and remote probing of the atmosphere are discussed 1 Solar system planets and the Sun 2 Earth's atmosphere 3 Propagation of radiation in atmosphere 4 Molecular absorption in atmosphere 5 Scattering of light in atmosphere 6 Optical properties of underlying surfaces 7 Fundamentals of theory of transfer of natural radiation of atmosphere 8 Main concepts of theory of transfer of solar radiation 9 Radiation energetics of the atmosphere underlying surface system 10 Radiation as a source of information on optical and physical parameters of planet atmospheres Atmospheric Aerosol Properties Kirill Ya. Kondratyev, Lev S. Ivlev, Vladimir F. Krapivin, Costas A. Varostos, 2006-08-29 This book provides the first comprehensive analysis of how aerosols form in the atmosphere through in situ processes as well as via transport from the surface dust storms seas spray biogenic emissions forest fires etc Such an analysis has been followed by the consideration of both observation data various field observational experiments and numerical modeling results to assess climate impacts of aerosols bearing in mind that these impacts are the

most significant uncertainty in studying natural and anthropogenic causes of climate change
