The Million Person Study of Low-Dose Radiation Health Effects John D. Boice Jr, André Bouville, Lawrence T. Dauer, Ashley P. Golden, Richard Wakeford, 2024-11-25 This book presents original research findings of The Million Person Study of Low Dose Radiation Health Effects MPS the largest and most comprehensive epidemiologic study of its kind to investigate the health effects of low level chronic radiation exposure on American workers and veterans throughout the 20th century Since the early 1900s epidemiologists have studied the consequences of radiation exposures yet the health effects of low levels received gradually over time remain unresolved This uncertainty comes at a time when the public and workers are experiencing ever increasing levels of radiation exposure from advances in medical radiation imaging techniques e g CT scans frequent flying at high altitudes and environmental and occupational exposures The MPS is providing answers by studying 30 radiation exposed U S populations including workers at nuclear power plants radiologists workers at former Manhattan Project sites nuclear submariners nuclear weapons test participants atomic veterans industrial radiographers and

radium dial painters Ongoing for more than 20 years and coordinated by the National Council on Radiation Protection and Measurements Vanderbilt University Medical Center and Memorial Sloan Kettering Cancer Center the MPS is a national effort supported by the Department of Energy National Aeronautics and Space Administration U S Navy Defense Threat Reduction Agency Nuclear Regulatory Commission Centers for Disease Control and Prevention and the Environmental Protection Agency Unparalleled in scope and quality the MPS provides an understanding of low dose health effects that is desperately needed for decision makers and the radiation protection community as society continues to increase the uses of radiation technologies Individual chapters were originally published in the International Journal of Radiation Biology *The Natural Radiation Environment VII* J.P. McLaughlin,E.S. Simopoulos,F. Steinhäusler,2005-03-30 The Natural Radiation Environment Symposium NRE VII the Seventh in the NRE series which commenced forty years ago in 1963 at Rice University Texas was held in Rhodes Greece in May 2002 During the intervening four decades the research work presented at these NRE Symposia has contributed to a deeper understanding of natural radiation and in particular of its contribution to human radiation exposures It is clear from the quality and diversity of the 143 papers in this volume of Radioactivity in the Environment series that the study of the natural radiation environment is an active and continually expanding field of research The papers in this volume fall into a number of main and topical research areas namely the measurement and behaviour of natural radionuclides in the environment cosmic radiation measurement and dosimetry the external penetrating radiation field at ground level TENR Technologically Enhanced Natural Radiation and NORM Naturally Occurring Radioactive Materials studies assessment of the health effects of radon regulatory aspects of natural radiation exposures In these papers the results of many new surveys of natural radionuclide levels in the environment and of improved methods of detection are described While some of the natural radiation sources investigated are unmodified by human activity many accounts are given here of exposures to natural sources which have been enhanced by technology Such TENR and NORM exposures are shown to range from activities such as mining oil and gas exploitation the use of industrial by products as building materials to space travel to name but a few In several cases quite high doses to some individuals are shown to occur Accounts are given here of methods to prevent and reduce exposures to such sources **Health Physics** Joseph John Bevelacqua,2016-07-12 The book bridges the gap between existing health physics textbooks and reference material needed by a practicing health physicist as the 21st century progresses This material necessarily encompasses emerging radiation generating technologies advances in existing technology and applications of existing technology to new areas The book is written for advanced undergraduate and graduate science and engineering courses It is also be a useful reference for scientists and engineers *Radiation in Space: Relevance and Risk for Human Missions* Christine E. Hellweg,Thomas Berger,Daniel Matthiä,Christa Baumstark-Khan,2020-07-23 This volume of the series Springer Briefs in Space Life Sciences explains the physics and biology of radiation in space defines various forms of cosmic radiation and their dosimetry and

presents a range of exposure scenarios It also discusses the effects of radiation on human health and describes the molecular mechanisms of heavy charged particles deleterious effects in the body Lastly it discusses countermeasures and addresses the vital question Are we ready for launch Written for researchers in the space life sciences and space biomedicine and for master s students in biology physics and medicine the book will also benefit all non experts endeavouring to understand and enter space

Board,Committee on Priorities for Space Science Enabled by Nuclear Power and Propulsion,2006-04-20 In 2003 NASA began an R D effort to develop nuclear power and propulsion systems for solar system exploration This activity renamed Project Prometheus in 2004 was initiated because of the inherent limitations in photovoltaic and chemical propulsion systems in reaching many solar system objectives To help determine appropriate missions for a nuclear power and propulsion capability NASA asked the NRC for an independent assessment of potentially highly meritorious missions that may be enabled if space nuclear systems became operational This report provides a series of space science objectives and missions that could be so enabled in the period beyond 2015 in the areas of astronomy and astrophysics solar system exploration and solar and space physics It is based on but does not reprioritize the findings of previous NRC decadal surveys in those three areas

Fundamentals of Space Biology Gilles Clément,K. Slenzka,2006-10-28 *Fundamentals of Space Biology* is the third textbook addressing Space Life Sciences in this Space Technology Library series The first of these books focused on the psychological and psychiatric issues that affect people who live and work in space Volume 16 *Space Psychology and Psychiatry* The second book described the physiological and medical issues of living in a space environment Volume 17 *Fundamentals of Space Medicine* The objective of this third book was to review the effects of spaceflight on less complex biological systems from single cells to animals and plants Indeed to better understand the changes at the function level it is necessary to comprehend the changes at cellular and tissue levels Studies of cell cultures for example allow the investigation of the indirect effects of gravity i e those which occur not because of changes in the stimulation of dedicated gravity sensing organs but because of the new physical properties resulting from the reduction in gravitational force within the cell
