Nuclear Science Abstracts ,1976 *Quantitative EPR* Gareth R. Eaton,Sandra S. Eaton,David P. Barr,Ralph T.

Weber,2010-04-10 There is a growing need in both industrial and academic research to obtain accurate quantitative results from continuous wave CW electron paramagnetic resonance EPR experiments This book describes various sample related instrument related and software related aspects of obtaining quantitative results from EPR experiments Some specific items to be discussed include selection of a reference standard resonator considerations Q B B power saturation sample position 1 m ing and nally the blending of all the factors together to provide a calculation model for obtaining an accurate spin concentration of a sample This book might at rst glance appear to be a step back from some of the more advanced pulsed methods discussed in recent EPR texts but actually quantitative routine CW EPR is a challenging technique and requires a thorough understanding of the spectrometer and the spin system Quantitation of CW EPR can be subdivided into two main categories 1 intensity and 2 magnetic field microwave frequency measurement Intensity is important for spin counting Both relative intensity quantitation of EPR samples and their absolute spin concentration of samples are often of interest This information is important for kinetics mechanism elucidation and commercial applications where EPR serves as a detection system for free radicals produced in an industrial process It is also important for the study of magnetic properties Magnetic field microwave frequency is important for g and nuclear hyperfine coupling measurements that reflect the electronic structure of the radicals or metal ions

Energy Research Abstracts ,1984

Free-Radical-Induced DNA Damage and Its Repair Clemens Sonntag, 2006-03-20 The free radical chemistry of DNA had been discussed in some detail in 1987 in my book *The Chemical Basis of Radiation Biology* Obviously the more recent developments and the concomitant higher level of understanding of mechanistic details are missing Moreover in the living cell free radical DNA damage is not only induced by ionizing radiation but free radical induced DNA damage is a much more general phenomenon It was therefore felt that it is now timely to review our present knowledge of free radical induced DNA damage induced by all conceivable free radical generating sources Originally it had been thought to include also a very important aspect the repair of DNA damage by the cell s various repair enzymes Kevin Prise Cancer Campaign Gray Laboratory London was so kind to agree to write this part However an adequate description of this strongly expanding area would have exceeded the allocated space by much and this section had to be omitted The directors of the Max Planck Institut für Strahlenchemie now MPI für Bioanorganische Chemie Karl Wieghardt and Wolfgang Lubitz kindly allowed me to continue to use its facilities after my retirement in 2001 Notably our librarian Mrs Jutta Theurich and her right hand help Mrs Rosemarie Schreier were most helpful in getting hold of the literature I thank them very much Without their constant help this would have been very difficult indeed
