## **Radical Constructivism In Mathematics Education:**

*Radical Constructivism in Mathematics Education* E. von Glasersfeld, 1991-06-30 Mathematics is the science of acts without things and through this of things one can define by acts 1 Paul Valéry The essays collected in this volume form a mosaic of theory research and practice directed at the task of spreading mathematical knowledge They address questions raised by the recurrent observation that all too frequently the present ways and means of teaching mathematics generate in the student a lasting aversion against numbers rather than an understanding of the useful and sometimes enchanting things one can do with them Parents teachers and researchers in the field of education are well aware of this dismal situation but their views about what causes the wide spread failure and what steps should be taken to correct it have so far not come anywhere near a practicable consensus The authors of the chapters in this book have all had extensive experience in teaching as well as in educational research They approach the problems they have isolated from their own individual perspectives Yet they share both an overall goal and a specific fundamental conviction that characterized the efforts about which they write here The common goal is to find a better way to teach mathematics The common conviction is that knowledge cannot simply be transferred ready made from parent to child or from teacher to student but has to be actively built up by each learner in his or her own mind Radical Constructivism in Mathematics Education E. von

Glasersfeld, 2014-01-15 **Radical Constructivism in Action** Leslie P. Steffe, Patrick W. Thompson, 2002-11-01 Over the last twenty five years Ernst von Glasersfeld has had a tremendous impact on mathematics and science education through his fundamental insights into the nature of knowledge and knowing *Radical Constructivism in Action* is a new volume of papers honouring his work by building on his model of knowing The contributions by leading researchers present constructivism in action tying the authors actions regarding practical problems of mathematics and science education philosophy and sociology to their philosophical constraints giving meaning to constructivism operationally The book begins with a retrospective analogy between radical constructivism's emergence and changes in what is thought of as certain scientific knowledge It aims to increase understanding of constructivism and Glasersfeld's achievement and is vibrant evidence of the continued vitality of research in the constructivism tradition *RADICAL CONSTRUCTIVISM* Ernst von Glasersfeld, 2013-08-06 First Published in 1995 In the past decade or two the most important theoretical perspective to emerge in mathematics education has been that of constructivism This burst onto the international scene at the controversial Eleventh International Conference on the Psychology of Mathematics Education in Montreal in the summer of 1987 No one there will forget von Glasersfeld's authoritative plenary presentation on radical constructivism and his replies to critics Ironically the conference at which attacks on radical constructivism were perhaps intended to expose fatally its weaknesses served as a platform from which the theory was launched to widespread international acceptance and approbation Radical constructivism is a theory of knowing that provides a pragmatic approach to questions about reality truth language and human understanding It breaks

with the philosophical tradition and proposes a conception of knowledge that focuses on experiential fit rather than metaphysical truth. It claims to be a useful approach, not the revelation of a timeless world. The ten chapters of this book present different facets in an elegantly written and thoroughly argued account of this epistemological position, providing a profound analysis of its central concepts.

**Radical Constructivism ; ...** Glasersfeld, 1995 *Key Works in Radical Constructivism* Ernst von Glasersfeld, 2007-01-01 *Key Works on Radical Constructivism* brings together a number of essays by Ernst von Glasersfeld that illustrate the application of a radical constructivist way of thinking in the areas of education, language, theory of knowledge, and the analysis of a few concepts that are indispensable in almost everything we think and do. Ernst von Glasersfeld's work opens a window on how we know what we know. The present work grew out of a desire to make more accessible this line of thought to highlight its originality and consistency and to illustrate its fecundity in the domains of cognition and learning. The first three parts of this book contain texts by Glasersfeld that outline the constructivist approach and explicate the frequently drastic reconceptualizations he has suggested. Both the last part and the postscript consist of commentaries by Edith Ackermann, Jacques D. Sautels, Gerard Fourez, Leslie P. Steffe, and Kenneth Tobin, scholars in the fields that Glasersfeld has been concerned with. They examine a number of critical aspects pertaining to radical constructivism's current and future development, often tracing out paths that warrant further exploration and reflection, in particular concerning the sociopolitical dimension of knowledge. *Key Works on Radical Constructivism* is intended as a reference book for researchers, educators, and students of education and for anyone interested in grasping or deepening their grasp of radical constructivism's tenets, ambitions, and concerns. Readers will discover in this collection of firsthand contributions the contours of a bold contemporary debate about a most compelling current of thought.

*Investigating Mathematics Teaching* Barbara Jaworski, 1994 The author charts her developing ideas as she undertakes a several-year-long inquiry into an investigative constructivist approach to mathematics teaching. She presents an account of constructivism as a philosophy of knowledge and learning, provides a rationale for the research methods she employs, and details case studies in the teaching and thinking of three teachers. The research took place in the UK before the introduction of the National Curriculum.

Democracy and Mathematics Education Kurt Stemhagen, Catherine Henney, 2021-05-06 In Democracy and Mathematics Education Kurt Stemhagen and Catherine Henney develop a way of thinking about the nature and purposes of math that is inclusive participatory and thoroughly human They use these ideas to create a school mathematics experience that can enhance students math abilities and democratic potential They locate mathematics origins in human activity and highlight the rich but often overlooked links between mathematical activity and democratic social practices Democratic mathematics education foregrounds student inquiry and brings to light the moral dimensions of a discipline that has both remarkable utility and inevitable limitations For math educators the book s humanities approach helps to see the subject anew For philosophers it provides an important real world context for wrestling with perennial and timely questions engaging democratic and evolutionary theory to transform school math This alternative approach to mathematics and mathematics education provides a guide for how to use math to make democracy a larger part of school and wider social life 2021 Winner of the AESA Critics Choice Book Award

**Shifts in the Field of Mathematics Education** Peter Gates, Robyn Jorgensen (Zevenbergen), 2014-11-02 Professor Stephen Lerman has been a leader in the field of mathematics education for thirty years His work is extensive making many significant contributions to a number of key areas of research Stephen retired from South Bank University in 2012 where he had worked for over 20 years though he continues to work at Loughborough University In this book several of his long standing colleagues and collaborators reflect on his contribution to mathematics education and in so doing illustrate how some of Steve s ideas and interventions have resulted in significant shifts in the domain

*Dialogue and Learning in Mathematics Education* Helle Alrø, Ole

Skovsmose,2006-01-02 Dialogue and Learning in Mathematics Education is concerned with communication in mathematics class rooms In a series of empirical studies of project work we follow students inquiry cooperation as well as students obstructions to inquiry cooperation Both are considered important for a theory of learning mathematics Special attention is paid to the notions of dialogue and critique A central idea is that dialogue supports critical learning of mathematics The link between dialogue and critique is developed further by including the notions of intention and reflection Thus a theory of learning mathematics is developed which is resonant with critical mathematics education **Handbook of International**

*A Journey in Mathematics Education Research* Erna Yackel,Koen Gravemeijer,Anna Sfard,2010-11-30 Our objective is to publish a book that lays out the theoretical constructs and research methodologies within mathematics education that have been developed by Paul Cobb and explains the process of their development We propose to do so by including papers in which Cobb introduced new theoretical perspectives and methodologies into the literature each preceded by a substantive accompanying introductory paper that explains the motivation rationale for developing the new perspectives and or methodologies and the processes through which they were developed and Cobb s own retrospective comments In this way the book provides the reader with heretofore unpublished material that lays out in considerable detail the issues and problems that Cobb has confronted in his work that from his viewpoint required theoretical and methodological shifts advances and provides insight into how he has achieved the shifts advances The result will be a volume that in addition to explaining Cobb s contributions to the field of mathematics education also provides the reader with insight into what is involved in developing an aggressive and evolving research program When Cobb confronts problems and issues in his work that cannot be addressed using his existing theories and frameworks he looks to other fields for theoretical inspiration A critical feature of Cobb s work is that in doing so he consciously appropriates and adapts ideas from these other fields to the purpose of supporting processes of learning and teaching mathematics He does not simply accept the goals or motives of

those fields As a result Cobb reconceptualizes and reframes issues and concepts so that they result in new ways of investigating exploring and explaining phenomena that he encounters in the practical dimensions of his work which include working in classrooms with teachers and with school systems The effect is that the field of mathematics education is altered Other researchers have found his new ways of looking useful to them And they in turn adapt these ideas for their own use The complexity of many of the ideas that Cobb has introduced into the field of mathematics education can lead to a multiplicity of interpretations by practitioners and by other researchers based on their own experiential backgrounds Therefore by detailing the development of Cobb s work including the tensions involved in coming to grips with and reconciling apparently contrasting perspectives the book will shed additional light on the processes of reconceptualization and thus help the reader to understand the reasons mechanisms and outcomes of researchers constant pursuit of new insights Handbook of

Commission Internationale pour l'Etude et l'Amélioration de l'Enseignement des Mathématiques CIEAEM was formed and twenty years ago another active group the International Group for the Psychology of Mathematics Education PME began at the third ICME at Karlsruhe in 1976 Since then several other specialist groups have been formed and are also active through regular conferences and publications as documented in Edward Jacobsen's Chapter 34 in this volume
