Biological Effects of Radiation Second Edition aims to present an organized survey of the various experiments wherein living materials have been exposed to ionizing and exciting types of radiations. However, this book focuses on the effects of radiation to lower organisms as these have received less attention. It tells how small amount of energy can damage submicroscopic structure and ultimately alter the appearance and abilities of such organisms. Divided into five parts, this book starts off with two introductory chapters in the first part. It explains the effects of radiation. Then other parts of the book focus on the impact of radiation from cellular to organ level. How the lower organisms response is then discussed. Lastly, the book explains the interrelations between organisms in contaminated areas. Same with the first edition, emphasis is given on the consequences of mutations as a whole chapter is devoted to this topic. Furthermore, this book covers discoveries from experiments with cultured cells. This book is a good text reference for students and professionals. Also, it can be of great help to scientists, researchers, and specialists involved in the biological response to radiation.

*Bone Marrow Transplantation and Other Treatment after Radiation Injury* H. Balner, 2012-12-06

Acute radiation injury in man has been amply reviewed in the past decades. 1/8 Information for those reviews was mainly derived from the Hiroshima and Nagasaki experience. 3/8 from radiation accidents as a consequence of testing nuclear weapons and the application of nuclear energy. 9/13 and from the intentional irradiation of patients mostly for the treatment of malignancies and/or as conditioning for transplantation. 14/20 Further, a large body of data derived from animal experimentation has led to cautious extrapolations to the human situation. 14/ An elaborate review dealing with early somatic effects of radiation in a man was published by UNSCEAR in 1962. 2/ It was supplemented in 1969 with a similar document dealing mostly with radiation induced chromosome aberrations, the effects of radiation on the nervous system, and radioactive contamination of the environment by nuclear testing. 21/ In a more recent UNSCEAR report 1972, the main topics were genetic effects, carcinogenesis, and effects of radiation on the immune response. 22/ The early effects of radiation in man were also expertly and comprehensively reviewed in a report by the United States National Research Council in 1967. 23/
