*Paediatric Radiology Rapid Reporting for FRCR Part 2B* Michael Paddock, Amaka C. Offiah, 2019-01-28 This book provides

readers with a comprehensive evaluation of paediatric radiographs in preparation for the demanding Rapid Reporting component of the Fellowship of the Royal College of Radiologists FRCR Part 2B examination where the margin between pass and fail is very narrow. While other resources may include only a handful of paediatric images in a practice reporting packet, this book is dedicated solely to improving paediatric reporting skill and knowledge. It is designed to address an important deficiency identified in the FRCR Part 2B Examiners Report in that many candidates struggle with interpretation of paediatric imaging even for common paediatric pathologies. The ten practice tests presented, each with 30 images, will assist readers not only in passing the examination but also in the real world when they have to report paediatric radiographs independently. The range of cases covered from neonate to adolescent delivers a sound knowledge of both common paediatric fracture patterns and patterns which are subtler but require a definitive answer as to whether they are normal or abnormal. Guidance is also provided on how to describe each abnormality.

*Radiology in Forensic Medicine* Giuseppe Lo Re, Antonina Argo, Massimo Midiri, Cristina Cattaneo, 2019-07-04. This book offers a comprehensive overview of the forensic and radiological aspects of pathological findings, focusing on the most relevant medico-legal issues such as virtual autopsy, virtopsy, anthropometric identification, post mortem decomposition, features, and the latest radiological applications used in forensic investigations. Forensic medicine and radiology are becoming increasingly relevant in the international medical and legal field as they offer essential techniques for determining cause of death and for anthropometric identification. This is highly topical in light of public safety and economic concerns arising as a result of mass migration and international tensions. The book discusses the latest technologies applied in the forensic field, in particular computed tomography and magnetic resonance, which are continuously being updated. Radiological techniques are fundamental in rapidly providing a full description of the damage inflicted to add to witness and medical testimonies, and forensic radiological anthropology supplies valuable evidence in cases of violence and abuse. Written by international experts, it is of interest to students and residents in forensic medicine and radiology. It also presents a new approach to forensic investigation for lawyers and police special corps as well as law enforcement agencies.
