## **Radiological Diagnosis Of Chest Diseases:**

**Radiologic Diagnosis of Chest Disease** Miriam Sperber, 2012-12-06 Prior to the virtual atomic explosion of medical knowledge at a time when communication was very much slower a medical book to be authoritative and believable had to be written by a very knowledgeable and per force usually quite senior person The choice of texts was limited and tended to be dominated by a few classic a phrase not quite synonymous with dogma Following the information explosion the scenario is quite different Not only is there a geometric progression in the quantity and speed of development of new medical knowledge but also this development is occurring at very different rates in different countries This is particularly true in medical imaging The result is that it is now virtually impossible to produce a single author book that can cover the field or even a subdivision of it This absolute requirement for multiple authors has in turn created the need for a new type of editor author who must be multinational in approach have a uniquely informed appreciation of what is going on in medical imaging research throughout the entire world and possess the depth of personal knowledge and experience to judge correctly what work is the most rigorous and likely to have the greatest impact

lung disease On October 1 1896 Francis H Williams was able to report in the Boston Medical and Surgical Journal I have examined about 40 cases of pulmonary tuberculosis In his classic text The Roentgen Rays in Medicine and Surgery published in 1901 thoracic diseases took pride of place in the 658 page volume It is of further interest that just as Glyn Thomas here emphasizes the importance of technique so did Williams in his writings      **Diseases of the Chest** Toshiharu Matsushima, Masayoshi Kuwabara, Kenji Eguchi, 2007 A new and unique approach to evaluating chest radiographs This book takes a unique approach to diagnostic imaging of the chest Rather than simply providing examples of image findings in respiratory diseases a link is drawn between types of pathology and the kinds of patterns that are elicited in the radiologic images In a cooperative effort between specialists in radiology respiratory medicine and oncology a logical and comprehensive classification of the patterns that may appear in images caused by underlying pathology is presented in 20 types of patterns Based on this classification creating a differential diagnosis is simplified and made more efficient Highly illustrated and with only a minimum of necessary text classes of findings such as increased radiolucency or alveolar shadow atelectasis are used to orient the user toward the underlying medical problem Tables help to organize the basic findings so as to be able to arrive at a differential diagnosis confidently While the emphasis is on the chest X ray a strong supporting role is played by appropriate CT images drawings and photographs of pathologic specimens Even the index to this book is unique making reference primarily not to topics but to the types of images whether radiograph CT or pathologic specimen
