Radiopharmaceuticals For Positron Emission:

Radiopharmaceuticals for Positron Emission Tomography - Methodological Aspects G. Stöcklin, V.W.

Pike, 2012-12-06 Radiochemical methodology constitutes the most important base for the successful functioning of a PET group in the routine production and development of radiopharmaceuticals. Of the several hundred products which have been labelled with positron emitters during the past two decades about 35 are presently considered to be of major interest. The time for a state of the art review is right since this field has advanced over the past fifteen years to reach a level where guidelines can now be suggested. Chapters of this book deal with each of the main methodological aspects of the chemistry needed to develop an effective radiopharmaceutical namely radionuclide production, automation and metabolite analysis. A further chapter on QA/QC is written by a broadly based expert group and is meant to provide a guideline and a base for future monographs and regulations on major PET radiopharmaceuticals of today. This book will help the increasing numbers of scientists who are now entering the field of PET to appreciate the methodological aspects that are normally addressed by chemists in relation to PET radiopharmaceuticals; it provides many useful practical guidelines and will promote early success in their own endeavours since these will often necessarily begin by establishing chemical methodology of the kind discussed here.

Radiopharmaceuticals for Positron Emission Tomography, Volume 1 Peter J. H. Scott, Brian G. Hockley, 2012-03-13

The ultimate reference guide to the synthesis of radiopharmaceuticals. The Radiochemical Syntheses series provides scientists and professionals with a comprehensive reference to proven synthetic methods for radiochemical reactions along with step by step guidance on how to replicate these syntheses in the laboratory. Volume 1 in the series focuses on the synthesis and purification of radiopharmaceuticals in clinical use today. It brings together in one complete self contained volume a collection of monographs containing a wealth of practical information from across the literature demonstrating in meticulous detail how to prepare radiopharmaceuticals for positron emission tomography (PET) imaging especially in tumor studies, cardiology and neuroscience. Readers have key experimental details culled from the literature at their fingertips greatly simplifying the process of qualifying a site for the clinical production of new radiopharmaceuticals.

Further Radiopharmaceuticals for Positron Emission Tomography and New Strategies for Their Production Peter J. H.

Scott, 2015-05-05 This book describes methods and procedures for preparing PET radiopharmaceuticals and highlights new methods for conducting radiochemical reactions with carbon 11 (^{11}C) and fluorine 18 (^{18}F) which are two of the most commonly used radionuclides in positron emission tomography (PET) imaging. Provides reliable methods for radiochemical syntheses and reactions including all essential information to duplicate the procedure. Eliminates the time consuming process of searching journal articles and extracting pertinent details from lengthy experimental sections or supporting information. Focuses on an emerging and important area for pharmaceutical and medical applications. Encompasses technical, regulatory and application aspects. Includes solid phase radiochemistry, transition metal catalyzed radiochemistry, microfluidics, click chemistry, green
