Risk in the Modern Age NA NA, 2019-06-12 Environmental decision making in recent decades has become increasingly dependent on scientific expertise Grounded in universal principles of knowledge these expert evaluations often depart from the assessments of ordinary members of the public Whether the issue

is nuclear power genetic testing food safety or biodiversity conservation lay people are increasingly charging experts with being ignorant of local contextual considerations Scientists as well as many policy makers in turn contend that the public is hopelessly irrational in gauging environmental risks A growing group of social theorists has begun to take a keen interest in these disputes because risk captures central themes of late modernity Increasing individualization emerging new social movements and declining public trust in key institutions are notions that loom large in these debates Highlighting both theoretical and empirical perspectives this volume brings together a distinguished group of environmental sociologists who critique and extend current thinking on what it means to live in a risk society *Encyclopedia of Technological Hazards and Disasters in the Social Sciences* Duane A. Gill,Liesel A. Ritchie,Nnenia M. Campbell,2024-11-08 The Encyclopedia of Technological Hazards and Disasters in the Social Sciences brings together an array of global experts to investigate explore and analyse human caused disaster events Providing insights into both the origins and aftermaths of disaster events it offers advanced understanding of a broad range of disaster events facing society during the Anthropocene **Risk, Media and Stigma** Paul Slovic,2013-11-05 The benefits of modern technology often involve health safety and environmental risks that produce public suspicion of technologies and aversion to certain products and substances Amplified by the pervasive power of the media public concern about health and ecological risks can have enormous economic and social impacts such as the stigmatization experienced in recent years with nuclear power British beef and genetically modified plants This volume presents the most current and comprehensive examination of how and why stigma occurs and what the appropriate responses to it should be to inform the public and reduce undesirable impacts Each form of stigma is thoroughly explored through a range of case studies Theoretical contributions look at the roles played by government and business and the crucial impact of the media in forming public attitudes Stigma is not always misplaced and the authors discuss the challenges involved in managing risk and reducing the vulnerability of important products industries and institutions while providing the public with the relevant information they need about risks *Hazardous Wastes, Industrial Disasters, and Environmental Health Risks* Francis O. Adeola,2011-10-24 The sociology of hazardous waste risk and disasters is a relatively new discipline This book focuses on hazardous and toxic wastes releases industrial toxic disasters contamination of communities and the environment and the subsequent adverse health effects among exposed populations Presidential Administration and the Environment David M. Shafie,2013-12-17 After sweeping environmental legislation passed in the 1970s and 1980s the 1990s ushered in an era when new legislation and reforms to existing laws were consistently caught up in a gridlock In response environmental groups became more specialized and professional learning how to effect policy change through the courts states and federal agencies rather than through grassroots movements Without a significantly mobilized public and with a generally uncooperative Congress presidents since the 1990s have been forced to step into a new role of increasing presidential dominance over environmental policies Rather than working with Congress presidents instead have employed

unilateral actions and administrative strategies to further their environmental goals Presidential Administration and the Environment offers a detailed examination of the strategies and tools used by U S presidents Using primary sources from presidential libraries such as speeches and staff communications David M Shafie analyzes how presidents such as Bill Clinton and George W Bush have used alternative executive approaches to pass environmental policies From there Shafie presents case studies in land management water policy toxics and climate change He analyzes the role that executive leadership has played in passing policies within these four areas explains how this role has changed over time and concludes by investigating how Obama s policies compare thus far with those of his predecessors Shafie s combination of qualitative content analysis and topical case studies offers scholars and researchers alike important insights for understanding the interactions between environmental groups and the executive branch and the implications for future policymaking in the United States

The Science of Bureaucracy David Demortain,2020-01-21 How the US Environmental Protection Agency designed the governance of risk

and forged its legitimacy over the course of four decades The US Environmental Protection Agency was established in 1970 to protect the public health and environment administering and enforcing a range of statutes and programs Over four decades the EPA has been a risk bureaucracy formalizing many of the methods of the scientific governance of risk from quantitative risk assessment to risk ranking Demortain traces the creation of these methods for the governance of risk the controversies to which they responded and the controversies that they aroused in turn He discusses the professional networks in which they were conceived how they were used and how they served to legitimize the EPA Demortain argues that the EPA is structurally embedded in controversy resulting in constant reevaluation of its credibility and fueling the evolution of the knowledge and technologies it uses to produce decisions and to create a legitimate image of how and why it acts on the environment He describes the emergence and institutionalization of the risk assessment risk management framework codified in the National Research Council's Red Book and its subsequent unraveling as the agency's mission evolved toward environmental justice ecological restoration and sustainability and as controversies over determining risk gained vigor in the 1990s Through its rise and fall at the EPA risk decision making enshrines the science of a bureaucracy that learns how to make credible decisions and to reform itself amid constant conflicts about the environment risk and its own legitimacy
