Ragnarok Ignatius Donnelly,2013-07-23 What do we dwell on The earth What part of the earth The latest formations of course We live upon the top of a mighty series of stratified rocks laid down in the water of ancient seas and lakes during incalculable ages said by geologists to be from ten to twenty miles in thickness Think of that Rock piled over rock from the primeval granite upward to a height four times greater than our highest mountains and every rock stratified like the leaves of a book and every leaf containing the records of an intensely interesting history illustrated with engravings in the shape of fossils of all forms of life from the primordial cell up to the bones of man and his implements But it is not with the pages of this sublime volume we have to deal in this book It is with a vastly different but equally wonderful formation Upon the top of the last of this series of stratified rocks we find THE DRIFT What is it Go out with me where yonder men are digging a well Let us observe the material they are casting out First they penetrate through a few inches or a foot or two of surface soil then they enter a vast deposit of sand gravel and clay It may be fifty one hundred five hundred eight hundred feet before they reach the stratified rocks on which this drift rests It covers whole continents It is our earth It makes the basis of our soils our railroads cut their way through it our carriages drive over it our cities are built upon it our crops are derived from it the water we drink percolates through it on it we live love marry raise children think dream and die and in the bosom of it we will be buried Where did it come from That is what I propose to discuss with you in this work if you will have the patience to follow me So far as possible as I shall in all cases speak by the voices of others I shall summon my witnesses that you may cross examine them I shall try to the best of my ability to buttress every opinion with adequate proofs If I do not convince I hope at least to interest you And to begin let us understand what the Drift is before we proceed to discuss its origin In the first place it is mainly unstratified its lower formation is altogether so There may be clearly defined strata here and there in it but they are such as a tempest might make working in a dust heap picking up a patch here and laying it upon another there But there are no continuous layers reaching over any large extent of country Sometimes the material has been subsequently worked over by rivers and been distributed over limited areas in strata as in and around the beds of streams But in the lower older and first laid down portion of the Drift called in Scotland the till and in other countries the hard pan there is a total absence of stratification James Geikie says In describing the till I remarked that the irregular manner in which the stones were scattered through that deposit imparted to it a confused and tumultuous appearance The clay does not arrange itself in layers or beds but is distinctly unstratified Ragnarok, the age of fire and gravel Ignatius Donnelly,1888 Ragnarok; The Age of Fire and Gravel Ignatius Donnelly,2025-08-31 Reproduction of the original The Antigonos publishing house specialises in the publication of reprints of historical books We make sure that these works are made available to the public
