A Technological Dictionary: explaining the terms of the arts, sciences, literature, professions and trades W. M. BUCHANAN,1846 **Railway Guns** John Goodwin,2016-08-30 In the nineteenth century the War Office showed little interest in developing large heavy artillery for its land forces preferring instead to equip its warships with the biggest guns Private initiatives to mount a gun on a railway truck pulled by a steam engine were demonstrated before military chiefs in the Southern Counties but not taken up However the development of longer range guns weighing up to 250 tons to smash through the massive armies and trench systems on the Western Front in 1916 led to a rethink The only way to move these monsters about quickly in countryside thick with mud was to mount them on specially built railway trucks towed by locomotives The railway guns were to be put on little used country lines where they could fire on beaches road junctions and harbors The locations and cooperation given by the independent railway companies is explained as are the difficulties of using the same lines for war and civilian traffic The First World War also saw the emergence of large training camps for railway men When the war ended most railway guns were dismantled and lost in ordnance depots The Army Council was uncertain about artillery needs in a future war so training and development stopped This book largely concentrates on the realities of the time the type of gun the locomotives artillery targets locations and what it was like when firing took place It is fully illustrated with pictures maps and plans covering different aspects of railway guns their locomotives and equipment
