Signals and Boundaries John H. Holland, 2014-01-10 An overarching framework for comparing and steering complex adaptive systems is developed through understanding the mechanisms that generate their intricate signal boundary hierarchies Complex adaptive systems cas including ecosystems governments biological cells and markets are characterized by intricate hierarchical arrangements of boundaries and signals In ecosystems for example niches act as semi permeable

boundaries and smells and visual patterns serve as signals governments have departmental hierarchies with memoranda acting as signals and so it is with other cases Despite a wealth of data and descriptions concerning different cases there remain many unanswered questions about steering these systems In *Signals and Boundaries* John Holland argues that understanding the origin of the intricate signal border hierarchies of these systems is the key to answering such questions He develops an overarching framework for comparing and steering cases through the mechanisms that generate their signal boundary hierarchies Holland lays out a path for developing the framework that emphasizes agents niches theory and mathematical models He discusses among other topics theory construction signal processing agents networks as representations of signal boundary interaction adaptation recombination and reproduction the use of tagged urn models adapted from elementary probability theory to represent boundary hierarchies finitely generated systems as a way to tie the models examined into a single framework the framework itself illustrated by a simple finitely generated version of the development of a multi celled organism and Markov processes

Life in the Cape York Rainforest Robert Heinsohn, 2008 Stunning color photographs Unrivalled and authoritative coverage of an area of great biological interest The remote beautiful and poorly known rainforests of Cape York Peninsula tell a special story about Australia's historic and present day connections to New Guinea This book highlights the connections by examining the fascinating biology of some of the most spectacular birds and other animals shared between the two regions The author recounts his own ground breaking research on cross dressing eclectus parrots musical palm cockatoos and multi colored pythons together with the exotic lifestyles of other animals while painting the bigger picture of the past when Australia and New Guinea were joined by extensive landbridges Australia's disconnection from New Guinea is probably only temporary and even today many bird species continue to fly the short distance between the two landmasses The book uses the beautiful photographs of Michael Cermak and others to draw the reader in and lively informative text to describe the remarkable behavior of many of the rainforest creatures and to emphasize the shallow and transient nature of Torres Strait as a barrier between Cape York and New Guinea Whether just browsing the beautiful photos and informative captions or reading it in its entirety this book will provide a useful guide for a greater understanding of the unique attributes of the Cape York rainforests
