Specification Languages (SoSL) Derek J. Andrews, Jan F. Groote, C.A. Middelburg, 2012-12-06 SoSL was the first International Workshop on Semantics of Specification Languages held from 25-27 October 1993 in Utrecht the Netherlands. The workshop was organized by the Department of Philosophy of Utrecht University with financial support from the Nationale Faciliteit Informatica of the Nederlandse Organisatie voor Wetenschappelijk Onderzoek NWO and under the auspices of the British Computer Society's specialist group in Formal Aspects of Computing Science BCS FACS. The concern of the workshop was the semantics of specification languages and the issues closely related to this area such as type checking and the justification of proof rules and proof obligations. Its aim was the exchange of problems and ideas in this field of formal methods and the identification of common programs of work for further investigation. The program of SoSL consisted of 3 invited lectures presenting the developments of the semantics of 3 major specification languages. Furthermore, there were 16 presentations of submitted papers. This volume provides a direct account of the workshop. It contains 3 papers that match the invited lectures and the 16 selected papers. The editors want to thank all those who have contributed to the workshop: the Program Committee and the referees for selecting the contributed papers; the invited speakers for their interesting talks; the Organizing Committee for all their efforts; and of course the participants. We have the feeling that the workshop was worthwhile and should be repeated.

VDM '91. Formal Software Development Methods. 4th International Symposium of VDM Europe, Noordwijkerhout, The Netherlands, October 21-25, 1991. Proceedings

Søren Prehn, W. J. Toetenel, 1991. The proceedings of the fourth Vienna Development Method Symposium VDM 91 are published here in two volumes. Previous VDM symposia were held in 1987 LNCS 252, 1988 LNCS 328 and 1990 LNCS 428. The VDM symposia have been organized by the VDM Europe formed in 1985 as an advisory board sponsored by the Commission of the European Communities. The VDM Europe working group consisted of researchers, software engineers and programmers all interested in promoting the industrial usage of formal methods for software development. The fourth VDM symposium presented not only VDM but also a large number of other methods for formal software development. Volume 1 contains the conference contributions. It has four parts: contributions of invited speakers, papers, project reports and tools demonstration abstracts. The emphasis is on methods and calculi for development verification and verification tools support experiences from doing developments and the associated theoretical problems. Volume 2 contains four introductory tutorials on LARCH, Refinement Calculus, VDM and RAISE and four advanced tutorials on ABEL, PROSPECTRA, The B Method and The Stack. They present a comprehensive account of the state of the art. PUBLISHER: S. WEBSITE: [Integrated Formal Methods](#). Wolfgang Grieskamp, Thomas Santen, Bill Stoddart, 2007-10-23. [A Brief History of Computing](#). Gerard O'Regan, 2008-02-01. Overview. The objective of this book is to provide an introduction into some of the key topics in the history of computing. The computing field is a vast area and a truly comprehensive account of its history would require several volumes. The aims of this book are more modest and its goals are to give the reader a flavour of some of the key topics and events in the history of

computing It is hoped that this will stimulate the interested reader to study the more advanced books and articles available The history of computing has its origins in the dawn of civilization Early hunter gatherer societies needed to be able to perform elementary calculations such as counting and arithmetic As societies evolved into towns and communities there was a need for more sophisticated calculations This included primitive accounting to determine the appropriate taxation to be levied as well as the development of geometry to enable buildings templates and bridges to be constructed Our account commences with the contributions of the Egyptians and Babylonians It moves on to the foundational work done by Boole and Babbage in the nineteenth century and to the important work on Boolean Logic and circuit design done by Claude Shannon in the 1930s The theoretical work done by Turing on computability is considered as well as work done by von Neumann and others on the fundamental architecture for computers

Industrial Applications of Formal Methods to Model, Design and Analyze Computer Systems Dan Craigen, Susan Gerhart, 2012-12-02 Formal methods are mathematically based techniques often supported by reasoning tools that can offer a rigorous and effective way to model design and analyze computer systems The purpose of this study is to evaluate international industrial experience in using formal methods The cases selected are representative of industrial grade projects and span a variety of application domains The study had three main objectives To better inform deliberations within industry and government on standards and regulations To provide an authoritative record on the practical experience of formal methods to date and To suggest areas where future research and technology development are needed This study was undertaken by three experts in formal methods and software engineering Dan Craigen of ORA Canada Susan Gerhart of Applied Formal Methods and Ted Ralston of Ralston Research Associates Robin Bloomfield of Adelard was involved with the Darlington Nuclear Generating Station Shutdown System case Support for this study was provided by organizations in Canada and the United States The Atomic Energy Control Board of Canada AECB provided support for Dan Craigen and for the technical editing provided by Karen Summerskill The U S Naval Research Laboratories NRL Washington DC provided support for all three authors The U S National Institute of Standards and Technology NIST provided support for Ted Ralston

Algebraic Methodology and Software Technology Charles Rattray, Savitri Maharaj, 2004-06-24 This book constitutes the refereed proceedings of the 10th International Conference on Algebraic Methodology and Software Technology AMAST 2004 held in Stirling Scotland UK in July 2004 The 35 revised full papers presented together with abstracts of 5 invited talks and an invited paper were carefully reviewed and selected from 63 submissions Among the topics covered are all current issues in formal methods related to algebraic approaches to software engineering including abstract data types process algebras algebraic specification model checking abstraction refinement model checking state machines rewriting Kleene algebra programming logic etc

Formal Methods and Software Engineering Jim Davies, Wolfram Schulte, Mike Barnett, 2004-10-28 Formal engineering methods are changing the way that software systems are developed With language and tool support they are being used for automatic code generation and for

the automatic abstraction and checking of implementations In the future they will be used at every stage of development requirements specification design implementation testing and documentation The ICFEM series of conferences aims to bring together those interested in the application of formal engineering methods to computer systems Researchers and practitioners from industry academia and government are encouraged to attend and to help advance the state of the art Authors are strongly encouraged to make their ideas as accessible as possible and there is a clear emphasis upon work that promises to bring practical tangible benefit reports of case studies should have a conceptual message theory papers should have a clear link to application and papers describing tools should have an account of results ICFEM 2004 was the sixth conference in the series and the first to be held in North America Previous conferences were held in Singapore China UK Australia and Japan The Programme Committee received 110 papers and selected 30 for presentation The final versions of those papers are included here together with 2 page abstracts for the 5 accepted tutorials and shorter abstracts for the 4 invited talks
