Plastics Processing Data Handbook D.V. Rosato, 2012-12-06 This comprehensive book provides guidelines for maximizing plastics processing efficiency in the manufacture of all types of products using all types of plastics A practical approach is employed to present fundamental yet comprehensive coverage of processing concepts The information and data presented by the many tables and figures interrelate the different variables that affect injection molding extrusion blow molding thermoforming compression molding reinforced plastics molding rotational molding reaction injection molding coining casting and other processes The text presents a great number of problems pertaining to different phases of processing Solutions are provided that will meet product performance requirements at the lowest cost Many of the processing variables and their behaviors in the different processes are the same as they all involve basic conditions of temperature time and pressure The book begins with information applicable to all processes on topics such as melt softening flow and controls all processes fit into an overall scheme that requires the interaction and proper control of systems Individual processes are reviewed to show the effects of changing different variables to meet the goal of zero defects The content is arranged to provide a natural progression from simple to complex situations which range from control of a single manual machine to simulation of sophisticated computerized processes that interface with many different processing functions

Material Selection for Thermoplastic Parts Michel Biron, 2015-09-02 As new applications are developed and plastics replace traditional materials in a widening spectrum of existing applications the potential personal injury property damage financial and legal consequences of failure can be high However nearly half of plastics failure can be traced back to the original specification and selection of the material This book gives engineers the data they need to make an informed decision about the materials they use in their products imparting a thorough knowledge of the advantages and disadvantages of the various materials to choose from The data also suggests other candidate materials which the reader may not have originally considered More than 30 000 thermoplastics grades are grouped into circa 300 subfamilies within which over 20 properties are assessed The abundance or scarcity of a material and its cost are also often important deciding factors In this book an economical overview of the plastics industry helps clarify the actual consumption and costs of thermoplastics including bioplastic and the relationship of cost vs performance is also examined for each thermoplastic subfamily Immediate and long term common properties are reviewed including mechanical behavior impact thermal properties and many more Environmental considerations are also covered including ease of recycling and sustainability Helps engineers to implement a systematic approach to material selection in their work Includes more than 300 subfamilies of thermoplastic and a wide range of properties including chemical resistance thermal degradation creep and UV resistance Evaluates cost performance relations and environmental considerations
