Action of Steroid Hormones Jorge R. Pasqualini, 1976 **Carbohydrate Chemistry** J S Brimacombe, 2007-10-31

Carbohydrate Chemistry provides review coverage of all publications relevant to the chemistry of monosaccharides and oligosaccharides in a given year. The amount of research in this field appearing in the organic chemical literature is increasing because of the enhanced importance of the subject, especially in areas of medicinal chemistry and biology. In no part of the field is this more apparent than in the synthesis of oligosaccharides required by scientists working in glycobiology. Glycomedicinal chemistry and its reliance on carbohydrate synthesis is now very well established, for example by the preparation of specific carbohydrate-based antigens, especially cancer-specific oligosaccharides and glycoconjugates. Coverage of topics such as nucleosides, amino sugars, alditols, and cyclitols also covers much research of relevance to biological and medicinal chemistry. Each volume of the series brings together references to all published work in given areas of the subject and serves as a comprehensive database for the active research chemist. Specialist Periodical Reports provide systematic and detailed review coverage in major areas of chemical research. Compiled by teams of leading authorities in the relevant subject areas, the series creates a unique service for the active research chemist with regular, in-depth accounts of progress in particular fields of chemistry. Subject coverage within different volumes of a given title is similar, and publication is on an annual or biennial basis. **Hormone Action, Part F: Protein Kinases** Jackie D. Corbin, Joel G.

, 1992-08-04 *Circumventricular Organs and Brain Fluid Environment* **Receptors and Hormone Action** Bert

O'Malley, Lutz Birnbaumer, 2012-12-02 *Receptors and Hormone Action* Volume 1 provides an overview of the state of knowledge in hormone action. This book describes basic methodologies and model systems used in the exploration of the

molecular bases of hormone action The chapters present not only a rather extensive description of hormone receptors and their properties but also basic aspects of structure and function of chromatin and membranes the sites at which hormones and their receptors exert their action The receptors discussed include soluble cytoplasmic and nuclear receptors for steroid hormones and vitamins membrane bound receptors for protein hormones and biogenic amines and nuclear receptors for thyroid hormones Receptor types are also covered in view of the large body of literature accumulated on the various functions of these fascinating but elusive molecules This book is intended for a broad spectrum of readers including those who have not yet worked in the field as well as those who have considerable expertise in one or another aspect of hormone action
