No Two Alike Human Nature And Human Individuality:

No Two Alike: Human Nature and Human Individuality Judith Rich Harris, 2007-06-17 The author of the controversial book *The Nurture Assumption* tackles the biggest mystery in all of psychology What makes people differ so much in personality and behavior It can't just be nature and nurture because even identical twins who grow up together same genes same parents have different personalities And if psychologists can't explain why identical twins are different they also can't explain why each of us differs from everyone else Why no two people are alike Harris turns out to be well suited for the role of detective it isn't easy to pull the wool over her eyes She rounds up the usual suspects and shows why none of the currently popular explanations for human differences birth order effects for example or interactions between genes and environment can be the perpetrator she is looking for None of these theories can solve the mystery of human individuality The search for clues carries Harris into some fascinating byways of science The evidence she examines ranges from classic experiments in social psychology to cutting edge research in neuroscience She looks at studies of twins research on autistic children observations of chimpanzees birds and even ants Her solution is a startlingly original one the first completely new theory of personality since Freud's Based on a principle of evolutionary psychology the idea that the human mind is a toolbox of special purpose devices Harris's theory explains how attributes we all have in common can make us different This is the story of a scientific quest but it is also the personal story of a courageous and innovative woman who refused to be satisfied with what everyone knows is true

No Two Alike Judith Rich Harris, 2010-02-15 A display of scientific courage and imagination William Saletan New York Times Book Review Why do people even identical twins reared in the same home differ so much in personality Armed with an inquiring mind and insights from evolutionary psychology Judith Rich Harris sets out to solve the mystery of human individuality

Reading Human Nature Joseph Carroll, 2011-03-01 As the founder and leading practitioner of literary Darwinism Joseph Carroll remains at the forefront of a major movement in literary studies Signaling key new developments in this approach *Reading Human Nature* contains trenchant theoretical essays innovative empirical research sweeping surveys of intellectual history and sophisticated interpretations of specific literary works including *The Picture of Dorian Gray* *Wuthering Heights* *The Mayor of Casterbridge* and *Hamlet* Evolutionists in the social sciences have succeeded in delineating basic motives but have given far too little attention to the imagination Carroll makes a compelling case that literary Darwinism is not just another school or movement in literary theory It is the moving force in a fundamental paradigm change in the humanities a revolution Psychologists and anthropologists have provided massive evidence that human motives and emotions are rooted in human biology Since motives and emotions enter into all the products of a human imagination humanists now urgently need to assimilate a modern scientific understanding of human nature Integrating evolutionary social science with literary humanism Carroll offers a more complete and adequate understanding of human nature

The Trouble with Trauma Michael Scheeringa, 2022-03-08 *The Trouble with Trauma* is the story of how the idea

of psychological trauma appeals to the human mind Trauma impacts many people psychologically but the evidence on the long term physical effect is incomplete Theories that psychological trauma can permanently damage your brain cause physical disease and change your essential character have become staples of human thought worldwide Dr Scheeringa explains how those theories are widely believed whilst not being true and at the heart of the story is an explanation of how humans choose to ignore scientific evidence and practice self deception based on heuristics for survival Heuristics is a rapid and efficient method to make judgments about threatening situations which may be especially relevant during an epidemic and the spread of misinformation But *The Trouble with Trauma* is more than a critique of social policy This is a book for anyone who wants a better understanding on how groupthink and herd mentality works and improves our ability to understand scientific fact Dr Scheeringa sheds light on why we choose to ignore scientific evidence while engaging the reader in a lively conversation on how we come to believe

Our Grandchildren Redesigned Michael Bess, 2016-09-06 A panoramic overview of

biotechnologies that can endlessly boost human capabilities and the drastic changes these superhuman traits could trigger. Biotechnology is moving fast. In the coming decades, advanced pharmaceuticals, bioelectronics, and genetic interventions will be used not only to heal the sick but to boost human physical and mental performance to unprecedented levels. People will have access to pills that make them stronger and faster; informatic devices will interface seamlessly with the human brain; and epigenetic modification may allow people to reshape their own physical and mental identities at will. Until recently, such major technological watersheds like the development of metal tools or the industrialization of manufacturing came about incrementally over centuries or longer. People and social systems had time to adapt; they gradually developed new values, norms, and habits to accommodate the transformed material conditions. But contemporary society is dangerously unprepared for the dramatic changes it is about to experience down this road on which it is already advancing at an accelerating pace. The results will no doubt be mixed. People will live longer, healthier lives; will fine-tune their own thought processes and will generate staggeringly complex and subtle forms of knowledge and insight. But these technologies also threaten to widen the rift between rich and poor, to generate new forms of social and economic division, and to force people to engage in constant cycles of upgrades and boosts merely to keep up. Individuals who boost their traits beyond a certain threshold may acquire such extreme capabilities that they will no longer be recognized as unambiguously human. In this important and timely book, prize-winning historian Michael Bess provides a clear, nontechnical overview of cutting-edge biotechnology and paints a vivid portrait of a near-future society in which bioenhancement has become a part of everyday life. He surveys the ethical questions raised by the enhancement enterprise and explores the space for human agency in dealing with the challenges that these technologies will present. Headed your way over the coming decades, new biotechnologies that can powerfully alter your body and mind. The possibilities are tantalizing: Rejuvenation therapies offering much longer lives, 160 and even beyond, in full vigor and mental acuity; Cognitive enhancement through chemical or bioelectronic means, the rough equivalent of doubling or tripling IQ scores; Epigenetic tools for altering some of your genetically influenced traits at any point in your lifetime; body shape, athletic ability, intelligence, personality. Bioelectronic devices for modulating your own brain processes, including your pleasure centers, a potentially non-stop high. Direct control of machines by thought and perhaps direct communication with other people, brain-to-brain, a new dimension of sharing and intimacy. But some of the potential consequences are also alarming. A growing rift between the biologically enhanced and those who can't afford such modifications. A constant cycle of upgrades and boosts as the bar of normal rises ever higher. Humans 95, Humans XP, Humans 8. The fragmentation of humankind into rival bioenhancement clusters. A gradually blurring boundary between person and product. Extreme forms of self-modification with some individuals no longer recognized as unambiguously human. The Evolution of Personality and Individual Differences David M. Buss, 2011. Capturing a scientific change in thinking about personality and individual differences, this volume provides theories and empirical evidence which suggest that personality and individual differences

are central to evolved psychological mechanisms and behavioural functioning *Chance, Character, and Change* John Mattausch, 2017-07-12 Chance is real Not only is it a cause of societal change but we as individuals are chance given characters who discover and build our character in chancy circumstances Chance is also expressed as coincidence and contingency expressions which have episodically been of undeniable historical importance Mattausch asserts the conventional picture of societal change is incorrect Societal change is not a linear succession with each phase of change replacing its predecessor Instead the process is one of accumulative change in which chance plays various roles Chance Character and Change develops the idea of chance situating it within the history of thought and social change By focusing strictly on manifestations of chance and of luck that can be seen and explained Mattausch is able to show how chance acts in the environment of evolution and the social practices that regulate the inheritance of knowledge and technology This in turn steers societal change and how change itself occurs Chance's role is often characterized as coincidence or contingency and this automatically is seen as progressive or degenerate However Mattausch notes that accumulative change is potentially both progressive as well as decadent Chance also plays a part in the social aspects of our world customs practices cultures societies and politics When we act Mattausch argues we do not distinguish between good and bad but rather between determinism and chance the latter is a test of character not of free will This theory is general in its assertions and application and can be related to many areas of study from economic theory to human behavior to politics The rich texture of the writing and vivid use of examples from daily life and the work of other major thinkers draw in the reader The most striking aspect of this work is the author's writing style and the way he weaves together evidence classic research and contemporary thought It is skillful

Against Absolute Goodness Richard Kraut, 2011-12-02 Richard Kraut argues that goodness is not a reason giving property in fact there may be no such thing Handbook of Personality Oliver P. John, Richard W. Robins, Lawrence A. Pervin, 2010-11-24 This authoritative handbook is the reference of choice for researchers and students of personality Leading authorities describe the most important theoretical approaches in personality and review the state of the science in five broad content areas biological bases development self and social processes cognitive and motivational processes and emotion adjustment and health Within each area chapters present innovative ideas findings research designs and measurement approaches Areas of integration and consensus are discussed as are key questions and controversies still facing the field The Better Angels of Our Nature Steven Pinker, 2012-09-25 Faced with the ceaseless stream of news about war crime and terrorism one could easily think this is the most violent age ever seen Yet as bestselling author Pinker shows in this startling and engaging new work just the opposite is true *The General Factor of Personality* Janek Musek, 2017-05-04 The General Factor of Personality improves our understanding of the personality structure and the relations between major personality dimensions as well as major dimensions of the entire non cognitive sphere of psychological variables The results of the empirical testing and theoretical evaluations in this book contribute to the more

comprehensive and precise theoretical framework of the General Factor of Personality GFP and that of the entire personality structure. Additionally, the book answers some unresolved questions concerning the nature of the GFP, including whether it is based more on correlations in real behavior or on other less substantial factors between lower order dimensions of personality. This book is crucially important not only for theoretical reasons but also for the tremendous practical and applied value of the assumed general dimension of personality. As a common denominator of all the most important fields of personality beyond cognition, Big Five well-being, coping, emotionality, motivation, self-concept, self-esteem, control, wisdom, and others, the GFP represents an extremely strong single predictor of the quality of life, mental health, and well-being, career, academic success, and the quality of family and interpersonal relations. Reviews the theoretical and methodological work on the General Factor of Personality GFP. Presents major research results in the field of GFP and the dimensional structure of personality. Provides a balanced and objective approach to the topic of GFP, addressing criticisms and controversies. Considers the practical and applied aspects of this research. Draws conclusions on the bioevolutionary model of GFP to give a more thorough understanding of biological bases of human personality. **The Domesticated Brain** Bruce Hood, 2014-05-01

What makes us social animals? Why do we behave the way we do? How does the brain influence our behaviour? The brain may have initially evolved to cope with a threatening world of beasts, limited food, and adverse weather, but we now use it to navigate an equally unpredictable social landscape. In *The Domesticated Brain*, renowned psychologist Bruce Hood explores the relationship between the brain and social behaviour, looking for clues as to origins and operations of the mechanisms that keep us bound together. How do our brains enable us to live together, to raise children, and to learn and pass on information and culture? Combining social psychology with neuroscience, Hood provides an essential introduction to the hidden operations of the brain and explores what makes us who we are. Evolutionary Psychology Lance Workman, Will Reader, 2021-05-20

A classic introduction to the fascinating science of evolutionary psychology, now in full colour and including the latest research updates. Personality, 2007-09-13. Why are some people worriers and others wanderers? Why do some people seem good at empathising and others at controlling? We have something deep and consistent within us that determines the choices we make and the situations we bring about. But why should members of the same species differ so markedly in their natures? What is the best personality to have: a bold one or a shy one, an aggressive one or a meek one? And are you stuck with your personality, or can you change it? Daniel Nettle takes the reader on a tour through the science of human personality, introducing the five dimensions on which every personality is based, and using an unusual combination of individual life stories and scientific research. Showing how our personalities stem from our biological makeup, Nettle looks at the latest findings from genetics and brain science, considers the evolutionary origins and consequences of personality variation, and even includes a questionnaire for you to assess your own personality against the five dimensions. There is no optimal personality to have. Rather, every disposition brings both advantages and disadvantages. Life is partly the business of finding a

niche where your personal characteristics work for you Full of human as well as scientific insight this book will enable you to understand the perils and potentials of your personality to the full *The Evolution of Psychopathology* Todd K. Shackelford, Virgil Zeigler-Hill, 2017-08-01 This review of recent evolutionary theories on psychopathology takes on controversies and contradictions both with established psychological thought and within the evolutionary field itself Opening with the ancestral origins of the familiar biopsychosocial model of psychological conditions the book traces distinctive biological and cultural pathways shaping human development and their critical impact on psychiatric and medical disorders Analyses of disparate phenomena such as jealousy social anxiety depressive symptoms and antisocial behavior describe adaptive functions that have far outlasted their usefulness or that require further study and perhaps new directions for treatment In addition the book s compelling explorations of violence greed addiction and suicide challenge us to revisit many of our assumptions regarding what it means to be human Included in the coverage Evolutionary foundations of psychiatric compared to non psychiatric disorders Evolutionary psychopathology uncomplicated depression and the distinction between normal and disordered sadness Depression is rumination really adaptive A CBT approach to coping with sexual betrayal and the green eyed monster Criminology s modern synthesis remaking the science of crime with Darwinian insight Anthropathology the abiding malady of the species With its wealth of interdisciplinary viewpoints *The Evolution of Psychopathology* makes an appropriate supplementary text for advanced graduate courses in the evolutionary sciences particularly in psychology biology anthropology sociology and philosophy **Variability in Human Performance** Thomas J. Smith, Robert A. Henning, Michael G. Wade, Thomas Fisher, 2014-08-26 Understanding the conditions under which variability in performance may arise and the processes related to its emergence gives us insight into the development of techniques for improving the quality of performance This book introduces a comprehensive framework for understanding human performance variability in terms of how human control of behavior is closely tied to design factors in the performance environment Empirical evidence as well as practical examples and application areas introduced in support of this framework The book provides suggestions on how individuals groups and organizations can significantly reduce variability in human performance that often leads to systems failures *Delinquency in Society* Robert M. Regoli, John D. upset the nicer you are Or why your child is always arguing with you doesn't listen or seems intent on doing the opposite of what you want Now you no longer have to worry Communicating with Kids has the answers This new book explains how so often children are not resisting our messages but the way we are sending them It demonstrates why some of the ways we communicate lead to exactly the opposite of the behaviour we want and provides methods to tweak your language and approach so that children are willing to help you So much of the parenting advice we hear works against a child's developing brain so this book shows you how to work with it instead which makes all the difference Once you understand the difference between what you are saying and what your child actually hears life with children becomes so much easier This book is all about communication because apart from that there's no other advice you need the best way to bring up your child is to be yourself and do it your way Communicating with Kids is a book guaranteed to help all parents whether they veer towards the methods of Penelope Leach or Supernanny or have never read a parenting book before It is not based on any parenting ideology but on genuine experience with a wide range of children It is a plain talking book that presents communication methods that work so parents gain the confidence to be themselves
