Science Of Olfaction:

Science of Olfaction Michael J. Serby, Karen L. Chobor, 2012-12-06 A book such as this one necessarily entails the effort of many individuals Its first seed was a workshop in 1988 that one of us K L C designed and directed at the City University of New York Graduate Center as part of a series of conferences and workshops on topics in neuropsychology sponsored by the Institute for Research in Behavioral Neuroscience IRBN At that time studies in the efficacy of olfaction as an alternative modality of stimulation in brain injured adults were taking place at IRBN The work shop helped to spark many new ideas among IRBN s staff leading to various projects in clinical intervention some of which are discussed in this volume We soon discovered that clinical interest in olfaction was steadily increasing and that this modality was in many ways on a par with the rest Along with progress in the clinical investigation of olfaction an abundance of work has been published in the basic science of the field Ideas such as the regeneration of olfactory neurons and the use of these neurons in transplantation took hold and were proved to be viable ones These developments along with a profusion of techniques that allow a closer look at the anatomy and physiology of olfaction have contributed to the accelerated pace with which this field is now advancing Dr

Canine Olfaction Science and Law Tadeusz Jezierski, John Ensminger, L. E. Papet, 2016-04-20 The value of the canine nose is well documented and working dogs are being utilized for their olfactory skills in an increasing number of fields Not only are dogs used by police security and the military but they are also now used in forensic science in medical detection of disease in calculating population trends of endangered species and eradicating invasive species in protected environments and in identifying infestations and chemical contaminants Edited and contributed to by eminent scholars *Canine Olfaction Science and Law* Advances in Forensic Science Medicine Conservation and Environmental Remediation takes a systematic scientific approach to canine olfaction It includes work from scientists working in pure and applied disciplines trainers and handlers who have trained and deployed detection dogs and lawyers who have evaluated evidence produced with the aid of detection and scent identification dogs The book is divided into six sections covering The anatomy genetics neurology and evolution of canine olfaction as well as diseases affecting it The chemistry and aerodynamics of odors Behavior learning and training Uses of canine olfaction in forensics and law Uses in conservation and remediation Uses in detection of diseases and medical conditions The various contributors describe cutting edge research some conclusions of which are the subject of vigorous debates between various laboratories and researchers The editors have added cross references so that readers can consider the different perspectives that are currently being advanced and understand where consensus is being built and where more research needs to be done A useful practical reference *Canine Olfaction Science and Law* provides a wealth of information beneficial to a wide range of disciplines It aids trainers and handlers of detection dogs as well as various professionals in healthcare law enforcement forensic science and environmental conservation to gain a better understanding of the remarkable power of the canine nose while encouraging further advances in applications *The Science of Smell*

Robert Hamilton Wright, 1964 **Handbook of Olfaction and Gustation** Richard L. Doty, 2015-05-11 The largest collection of basic clinical and applied knowledge on the chemical senses ever compiled in one volume the third edition of Handbook of Olfaction and Gustation encompasses recent developments in all fields of chemosensory science particularly the most recent advances in neurobiology neuroscience molecular biology and modern functional imaging techniques Divided into five main sections the text covers the senses of smell and taste as well as sensory integration industrial applications and other chemosensory systems This is essential reading for clinicians and academic researchers interested in basic and applied chemosensory perception **On the Scent** Paolo Pelosi, 2016 Smell is arguably the most evocative of senses linked to memories and associations For most animals it is vital for survival For us it enriches our experience of the world our pleasure in food and drink and affects all human interaction Paolo Pelosi describes how scientists are finally unravelling the science of smell The Neurobiology of Olfaction Anna Menini, 2009-11-24 Comprehensive Overview of Advances in Olfaction The common belief is that human smell perception is much reduced compared with other mammals so that whatever abilities are uncovered and investigated in animal research would have little significance for humans However new evidence from a variety of sources indicates this traditional view is likely overly simplistic The Neurobiology of Olfaction provides a thorough analysis of the state of the science in olfactory knowledge and research reflecting the growing interest in the field Authors from some of the most respected laboratories in the world explore various aspects of olfaction including genetics behavior olfactory systems odorant receptors odor coding and cortical activity Until recently almost all animal research in olfaction was carried out on orthonasal olfaction inhalation It is only in recent years especially in human flavor research that evidence has begun to be obtained regarding the importance of retronasal olfaction exhalation These studies are beginning to demonstrate that retronasal smell plays a large role to play in human behavior Highlighting common principles among various species including humans insects *Xenopus laevis* African frog and *Caenorhabditis elegans* nematodes this highly interdisciplinary book contains chapters about the most recent discoveries in odor coding from the olfactory epithelium to cortical centers It also covers neurogenesis in the olfactory epithelium and olfactory bulb Each subject specific chapter is written by a top researcher in the field and provides an extensive list of reviews and original articles for students and scientists interested in further readings *Olfaction in Animal Behaviour and Welfare* Birte L Nielsen, 2017-06-29 Evidence based yet entirely practical this important new text builds upon the basics of neuroscience to describe the links between olfaction and animal behaviour and the effects of odours in animal welfare Animals use smells in a multitude of ways to orientate themselves to create social bonds to recognise food to initiate reproduction and to avoid predators and imminent threats such as fire Starting from the scientific basis of olfaction and odour perception the book covers pheromones and behavioural tests before describing the role of olfaction in feeding behaviour reproduction disease detection and animal housing This is a captivating introduction to the world of smells suitable for advanced students researchers and teachers of

applied ethology animal welfare and veterinary science Cell Biology of Olfaction Albert I. Farbman, 1992-10-30 The sense of smell is probably the most important sense to a large number of the animal species on Earth and the aim of the study of olfactory cell biology is to understand the cellular basis on which olfactory driven behaviour is based In this book the author presents a critical analysis of what is known about the olfactory sensory cells in both the nasal cavity and the vomeronasal organ Although the emphasis is on mammalian olfaction basic issues that have been addressed by research on other vertebrates and invertebrates are also discussed Throughout the book the premise is that we can only more thoroughly comprehend normal behaviour and dysfunction once we have a detailed understanding of the cells and tissues involved in the sense of smell **The Scientific Basis of Eating** Roger W. A. Linden, 1998 Eating is defined as the act of taking food into the mouth chewing and then swallowing it for nourishment The purpose of this volume is to present a number of up to date scientific reviews on the mechanisms involved in the process of eating and to introduce the reader to some of the problems encountered when these complex processes malfunction Topics include a discussion on the peripheral mechanisms of taste and smell taste and olfactory processing in the brain and its relation to the control of eating and a section on mastication with an account of the scientific basis of masticatory disorders The control mechanisms involved in salivation and swallowing are also extensively reviewed Because this book reviews the fundamental understanding of the physiological mechanisms involved in eating and includes an insight into the scientific basis of the malfunction of these mechanisms it will be of equal value to both clinical and basic scientists In particular basic and clinical oral biologists and neurophysiologists dental and medical researchers and postgraduate students will find it a valuable source of information *Neuromorphic Olfaction*

Krishna C. Persaud, Santiago Marco, Agustin Gutierrez-Galvez, 2016-04-19 Many advances have been made in the last decade in the understanding of the computational principles underlying olfactory system functioning Neuromorphic Olfaction is a collaboration among European researchers who through NEUROCHEM Fp7 Grant Agreement Number 216916 a challenging and innovative European funded project introduce novel computing paradigms and biomimetic artifacts for chemical sensing The implications of these findings are relevant to a wide audience including researchers in artificial olfaction neuroscientists physiologists and scientists working with chemical sensors Developing neuromorphic olfaction from conceptual points of view to practical applications this cross disciplinary book examines The biological components of vertebrate and invertebrate chemical sensing systems The early coding pathways in the biological olfactory system showing how nonspecific receptor populations may have significant advantages in encoding odor intensity as well as odor identity The redundancy and the massive convergence of the olfactory receptor neurons to the olfactory bulb A neuromorphic approach to artificial olfaction in robots Reactive and cognitive search strategies for olfactory robots The implementation of a computational model of the mammalian olfactory system The book's primary focus is on translating aspects of olfaction into computationally practical algorithms These algorithms can help us understand the underlying behavior of the chemical senses in biological systems

They can also be translated into practical applications such as robotic navigation and systems for uniquely detecting chemical species in a complex background

Smelling Over Limits Pasquale De Marco, 2025-07-10 Odors have the power to evoke memories trigger emotions and influence our behavior in profound ways In this comprehensive guide to the world of smells we embark on a journey to understand the science history and cultural significance of scents Delve into the intricate workings of the olfactory system uncovering the mechanisms by which we perceive and interpret scents Explore the fascinating world of perfumery tracing its evolution from ancient rituals to modern day fragrance houses Uncover the role of scents in art religion and everyday life exploring their vielf ltig uses and applications across cultures and time periods Discover the practical applications of scents in various fields from aromatherapy and essential oils to industrial odor control and scent marketing Gain insights into the latest advancements in olfactory technology including electronic noses synthetic fragrances and the use of scents in virtual reality With captivating stories intriguing experiments and practical tips this book offers a comprehensive exploration of the olfactory world inviting readers to appreciate the profound impact of scents on our lives If you like this book write a review

Applied Olfactory Cognition Gesualdo M Zucco, Benoist Schaal, Mats Olsson, Ilona Croy, 2014-12-02 Foreword by Richard J Stevenson Macquarie University Australia It was long thought that the human nose might be able to discriminate somewhere in the order of 10 000 different odourants The recent finding that the human nose can discriminate something like a trillion different smells serves as yet another reminder that we have again underestimated the capacity of our sense of smell Bushdid Magnasco Vosshall Keller 2014 This volume serves as a further corrective for anyone who should hold the view that olfaction is unimportant in human affairs The papers presented in this ebook carefully collated and overseen by Aldo Zucco Benoist Schaal Mats Olsson and Ilona Croy showcase a large number of quite different reasons for studying the applied side of olfaction and indeed human olfaction in general The 23 contributions presented here cover a broad range of topics which illustrate contemporary interests in our field Although with a strong applied focus a noteworthy feature of this ebook is the richness of the theoretical perspectives that are developed These range from considerations of olfactory perception memory expertise and priming right the way through to receptor genetics These contributions from many leading experts in the field will surely shape much of the applied work linking olfaction to disease which is a further focus of this ebook In respect to health and disease the chapters on aging pregnancy depression alcohol dependency and environmental odours present overviews and rich new data on many contemporary problems to which the study of olfaction is now contributing A particularly notable aspect of olfactory experience is the affective impact that odours can have on people and their lives The ebook covers some particularly intriguing aspects of work in this area with empirical

studies investigating dissociations between wanting and liking stress reduction in the elderly mother infant bonding and the emotions that different odourants can evoke This affective line of work is nicely complemented by empirical studies on expertise the effect of odours on visual attention and the relationship between particular personality traits and interest in olfaction The gradual appropriation of methods from cognitive neuroscience into olfaction is also nicely represented in this ebook with at least three of the chapters reporting data using neuroimaging including a particular intriguing study looking at recognition of odours in mixtures Finally the close links between olfactory perception and sensory evaluation are also reflected in a chapter on wine I hope that readers of this e book will be struck as I have been in reading its various chapters how much olfaction affects our lives and how the study of this sense can enrich it
