Thin Film Micro-Optics Ruediger Grunwald, 2007-02-19 Thin film microoptics stands for novel types of microoptical components and systems which combine the well known features of miniaturized optical elements with the specific advantages of thin optical layers This approach enables for innovative solutions in shaping light fields in spatial temporal and spectral domain Low dispersion and small angle systems for tailoring and diagnosing laser pulses under extreme conditions as well as VUV capable microoptics can be realized Continuous relief microstructures of refractive reflective and hybrid characteristics are obtained by vapor deposition technologies with shadow masks in rotating systems The book gives a comprehensive overview on fundamental laws of microoptics types of thin film microoptical components methods and constraints of their design fabrication and characterization structure transfer into substrates optical functions and applications Recent theoretical and experimental results of basic and applied research are addressed Particular emphasis will be laid on the generation of localized nondiffracting few cycle wavepackets of extended depth of focus and high tolerance against distortions It is shown that the spectral interference of ultrabroadband conical beams results in spatio temporal structures of characteristic X shape so called X waves which are interesting for robust optical communication New prospects are opened by exploiting small conical angles from nanolayer microoptics and self apodized truncation of Bessel beams leading to the formation of single maximum nondiffracting beams or needle beams Thin film microoptical beam shapers have an enormous potential for future applications like the two dimensional ultrafast optical processing multichannel laser matter interaction nonlinear spectroscopy or advanced measuring techniques Introduces a new and promising branch of microoptics Gives a compact overview on the types properties and applications of the most important microoptical components containing valuable data and facts Helps to understand the basic optical laws Reports on the historical development line of thin film microoptics Provides brand new results of research and development in the field of ultrashort pulse laser beam shaping and diagnostics Discusses the future trends and first approaches of next generation microoptics Contains a carefully assorted glossary of the most important technical terms

production of blazed holograms reversal bleaching for low flare light on holograms and red sensitivity of dichromated gelatin films

What Does the Honeybee See? And How Do We Know? Adrian Horridge, 2009-10-01 This book is the only account of what the bee as an example of an insect actually detects with its eyes Bees detect some visual features such as edges and colours but there is no sign that they reconstruct patterns or put together features to form objects Bees detect motion but have no perception of what it is that moves and certainly they do not recognize things by their shapes Yet they clearly see well enough to fly and find food with a minute brain Bee vision is therefore relevant to the construction of simple artificial visual systems for example for mobile robots The surprising conclusion is that bee vision is adapted to the recognition of places not things In this volume Adrian Horridge also sets out the curious and contentious history of how bee vision came to be understood with an account of a century of neglect of old experimental results errors of interpretation sharp disagreements and failures of the scientific method The design of the experiments and the methods of making inferences from observations are also critically examined with the conclusion that scientists are often hesitant imperfect and misleading ignore the work of others and fail to consider alternative explanations The erratic path to understanding makes interesting reading for anyone with an analytical mind who thinks about the methods of science or the engineering of seeing machines

Selected Papers on Optical Methods in Surface Metrology David J. Whitehouse, 1996 Topics in this volume include comparison of interferometric contouring techniques comparison of visibility of standard scratches and near grazing illumination and shadowing of rough surfaces

Selected Papers on Laser Beam Diagnostics Robert N. Hindy, Jeffrey H. Hunt, 1996 The papers in this volume cover topics including laser measurements of long distances surface flaw detection using oblique angle illumination optical diagnostics of laser metal interaction during welding high speed surface flaw detection and sulphur chemistry in flames

Selected Papers on Optical Pattern Recognition Francis T. S. Yu, Shizhuo Yin, 1999 SPIE Milestones are collections of seminal papers from the world literature covering important discoveries and developments in optics and photonics
