Patterson,2012-12-06 Among the myriad of changes that took place in Great Britain in the first half of the nineteenth century many of particular significance to the historian of science and to the social historian are discernible in that small segment of British society drawn together by a shared interest in natural phenomena and with sufficient leisure or opportunity to investigate and ponder them This group which never numbered more than a mere handful in comparison to the whole population may rightly be characterized as scientific They and their successors came to occupy an increasingly important place in the intellectual educational and developing economic life of the nation Well before the arrival of mid century natural philosophers and inventors were generally hailed as a source of national pride and of national prestige Scientific society is a feature of nineteenth century British life the best being found in London in the universities in Edinburgh and Glasgow and in a few scattered provincial centres **Mary Somerville and the Cultivation of Science, 1815-1848** Elizabeth C. ABSTRACT Mary Somerville 1780 1872 established her public reputation as a mathematician in Britain and the United States in the early 1830s with the publication of *Mechanism of the Heavens* 1831 From her position as a member of elite scientific circles Somerville launched into writing about the sciences for an educated audience at a time when science was considered

part of the broader culture Taken together her books *On the Connexion of the Physical Sciences* 1834 *Physical Geography* 1848 and *On Molecular and Microscopic Science* 1869 covered a broad scientific terrain Somerville kept her work up to date with the help of a network of scientific friends and acquaintances This dissertation examines how Somerville s science incorporated and reflected cultural assumptions and issues of the day from fears about social stability to the role of the empire from the status of animals to political economy This science as communication also carried aesthetic and religious values In *Mechanism of the Heavens* Somerville coated Pierre Simon Laplace s celestial mechanics with natural theology thus making Newton s legacy safe for a British audience worried by French radicalism *Physical Geography* was a book made for empire that incorporated the knowledge of those who were expanding the empire s physical boundaries as well as its knowledge boundaries *Physical Geography* also showcased how science commerce and nature were connected against the backdrop of empire Underlying much of Somerville s work was her faith in progress which was guaranteed by the same determinism that kept the planets on their course which were in turn part of the law like processes of nature guaranteed by God
