

# Zoonotic Diseases – Non-human Primates

Nonhuman primates are phylogenetically closely related to humans and may carry a wide variety of potentially serious infectious diseases that can be transmitted to exposed personnel. In addition, a number of typical and common human diseases are easily transmissible from human workers to nonhuman primates. Personnel working with nonhuman primates are required to participate in the Occupational Health Program. Major zoonotic diseases transmissible between nonhuman and human primates include:

Paul, Chittaranjan Koley, 2015-03-25 This book provides an introduction to the latest gene mapping techniques and their applications in biomedical research and evolutionary biology. It especially highlights the advances made in large scale genomic sequencing. Results of studies that illustrate how the new approaches have improved our understanding of the genetic basis of complex phenotypes including multifactorial diseases e.g. cardiovascular disease, type 2 diabetes and obesity, anatomic characteristics e.g. the craniofacial complex and neurological and behavioral phenotypes e.g. human brain structure and nonhuman primate behavior are presented. Topics covered include linkage and association methods, gene expression, copy number variation, next generation sequencing, comparative genomics, population structure and a discussion of the Human Genome Project. Further included are discussions of the use of statistical genetic and genetic epidemiologic techniques to decipher the genetic architecture of normal and disease related complex phenotypes using data from both humans and non human primates.

**The Human Disease** Sabrina Sholts, 2024-04-09 How the very fact of being human makes us vulnerable to pandemics and gives us the power to save ourselves. The COVID 19 pandemic won't be our last because what makes us vulnerable to pandemics also makes us human. That is the uncomfortable but all too timely message of *The Human Disease* which travels through history and around the globe to examine how and why pandemics are an inescapable threat of our own making. Drawing on dozens of disciplines from medicine, epidemiology and microbiology to anthropology, sociology, ecology and neuroscience as well as a unique expertise in public education about pandemic risks, biological anthropologist Sabrina Sholts identifies the human traits and tendencies that double as pandemic liabilities from the anatomy that defines us to the misperceptions that divide us. Weaving together a wealth of personal experiences, scientific findings and historical stories, Sholts brings dramatic and much needed clarity to one of the most profound challenges we face as a species. Though the COVID 19 pandemic looms large in Sholts's account, it is in fact just one of the many infectious disease events explored in *The Human Disease*. With its expansive evolutionary perspective, the book explains how humanity will continue to face new pandemics because humans cause them by the ways that we are and the things that we do. By recognizing our risks, Sholts suggests we can take actions to reduce them. When the next pandemic happens and how bad it becomes are largely within our highly capable human hands and will be determined by what we do with our extraordinary human brains. **Program**
