daily lives of many but it has also created a new layer of complications in the mental health world. The quality and amount of access to care between those with a certain level of privilege and those who do not have this privilege is sharp, creating more complicating factors for people in this age range. Such societal change has unfolded so rapidly that training programs have not had an opportunity to catch up, which has created a crisis for care. Efforts to modernize the approach to this unique age group are still young, and so no resource exists for any clinicians at any phase in their career. This book aims to serve as the first concise guide to fill this gap in the literature. The book will be edited by two leading figures in transition age youth, both of whom are at institutions that have been at the forefront of this clinical work and research. This proposed mid-sized guide is therefore intended to be a collaborative effort written primarily by child and adolescent psychiatrists and also with adult psychiatrists. The aim is to discuss the developmental presentation of many common mental health diagnoses and topics in chapters, with each chapter containing clinically relevant bullet points and/or salient features that receiving providers who are generally adult trained should keep in mind when continuing mental health treatment from the child and adolescent system. Chapters will cover a wide range of challenges that are unique to transition age youths, including their unique developmental needs, anxiety, mood, and personality disorders at the interface of this development, trauma, and adjustment disorders, special populations, and a wide range of other topics. Each chapter will begin with a clinical pearl about each topic before delving into the specifics.
