Nutritional and Metabolic Bases of Cardiovascular Disease Mario Mancini, Jose M. Ordovas, Gabrielle Riccardi, Paolo Rubba, Pasquale Strazzullo, 2011-07-11

Extraordinary advances in the understanding of the links between nutrition, metabolism, and cardiovascular disease have prompted a systematic reappraisal of knowledge in the field. As a result, it is now imperative that clinicians who care for patients with CVD or its key risk factors have a solid understanding of the often complex interrelationships between cardiovascular health and chronic diseases such as diabetes and obesity. Written by a team of international thought leaders in cardiology, endocrinology, diabetology, and nutritional science, this important new book examines and updates the role of obesity, hyperlipidemia, diabetes, hypertension, thrombosis, and aging in atherogenesis. Describes in detail the scientific and clinical evidence of the etiopathogenesis of ischemic heart disease as well as of peripheral and cerebrovascular disease. Focuses on the 6 topics that will be of greatest interest to readers: 1. general nutrition 2. metabolic syndrome and diabetes 3. hyperlipidemia and atherosclerosis 4. hypertension and cerebrovascular disease 5. hemostasis and thrombosis 6. aging. Throughout the book, in clear and accessible text, contributors illuminate the close relationship between dietary habits, the metabolic processes of nutrients, and their impact on the cardiovascular system, always with an eye on how the physician can use this information to implement better cardiovascular prevention and improve patient care. *Nutritional and Metabolic Bases of Cardiovascular Disease* is ideal for those who need to update their knowledge of the links between nutrition, metabolism, and CVD, from trainees, clinicians, and clinical investigators in cardiovascular medicine to endocrinologists, diabetologists, and nutritionists.

Nutrition and Heart Disease Ronald Ross Watson, Victor R. Preedy, 2003-12-17

Heart disease is the primary cause of death and disability in Western countries. Research indicates that nutrition and diet play key roles in both preventing and causing many types of heart damage and dysfunction. By understanding the complex relationship between diet and disease, new prevention measures can be established, and millions of lives can be saved.

The papers explore the link between genetics and nutrition in the context of biological evolution. They provide examples of successful interaction between the two disciplines and consider some aspects of nutrient requirements as well as utilization and consideration of methodological approaches to evaluate nutritional status with an emphasis on malnutrition. Divided into six parts encompassing 29 chapters, this volume begins with an overview of genetics and nutrition from an evolutionary perspective, citing findings among Amerindians. It proceeds with a discussion of the potential application of genetic epidemiology in nutritional research, nutrient requirements and metabolism, the association between obesity and energy balance, and assessment of nutritional status. It also presents case studies of the correlation between genetics and nutrition before introducing the reader to genetic inheritance and growth in human groups suffering from chronic under nutrition. Some data derived from nutrition longitudinal studies are analyzed to interpret the nutrition-genetics interaction. This book will be a valuable source of information for scientists and students in genetics and nutrition.
