Harden, 2013-10-22 The Meaning of Human Nutrition presents information basic to human nutrition An effort is made to relate food and human nutrition to the history of man's struggle for survival and to efforts to control the environment to his advantage Several lists of events are included to relate these efforts chronologically in history to show how great discoveries or ideas have evolved gradually This book has 10 chapters the first of which provides an overview of the study of human nutrition Basic concepts about human nutrition are then introduced

including the early man's concepts about food and survival on earth as well as the relationship between man's dietary problems and technological changes. The role of government in a democratic society to sponsor education and well being of all citizens is also considered. The chapters that follow focus on growth and development as indicators of nutritional status, food guides to nutrition, nutrient content of food and recommended dietary allowances. The book discusses as well the body's need for nutrients and its use of energy, protein as a source of amino acids and the importance of vitamins and minerals in human nutrition. The final chapter analyzes consumer concerns about food and nutrition. This monograph is designed as a textbook to help students develop deeper knowledge and understanding of human nutrition.

American Men and Women in Medicine, Applied Sciences and Engineering with Roots in Czechoslovakia Miloslav Rechcigl Jr., 2021-02-17

No comprehensive study has been undertaken about the American learned men and women with Czechoslovak roots. The aim of this work is to correct this glaring deficiency with the focus on men and women in medicine, applied sciences and engineering. It covers immigration from the period of mass migration and beyond irrespective whether they were born in their European ancestral homes or whether they have descended from them. This compendium clearly demonstrates the Czech and Slovak immigrants including Bohemian Jews have brought to the New World in these areas their talents, their ingenuity, the technical skills, their scientific knowhow as well as their humanistic and spiritual upbringing reflecting upon the richness of their culture and traditions developed throughout centuries in their ancestral home. This accounts for their remarkable success and achievements of these settlers in the New World transcending through their descendants as this publication demonstrates. The monograph has been organized into sections by subject areas: i.e. Medicine, Allied Health Sciences and Social Services, Agricultural and Food Science, Earth and Environmental Sciences and Engineering. Each individual entry is usually accompanied with literature and additional biographical sources for readers who wish to pursue a deeper study. The selection of individuals has been strictly based on geographical vantage without regards to their native language or ethnical background. Some of the entries may surprise you because their Czech or Slovak ancestry has not been generally known. What is conspicuous is a large percentage of listed individuals being Jewish which is a reflection of high level of education and intellect of Bohemian Jews. A prodigious number of accomplished women in this study is also astounding considering that in the 19th century they rarely had careers and most professions refused entry to them.
