Safe Food:

Safe Food Marion Nestle, 2010-06-15 Food safety is a matter of intense public concern and for good reason Millions of annual cases of food poisonings raise alarm not only about the food served in restaurants and fast food outlets but also about foods bought in supermarkets The introduction of genetically modified foods immediately dubbed Frankenfoods only adds to the general sense of unease Finally the events of September 11 2001 heightened fears by exposing the vulnerability of food and water supplies to attacks by bioterrorists How concerned should we be about such problems Who is responsible for preventing them Who benefits from ignoring them Who decides Marion Nestle author of the critically acclaimed Food Politics argues that ensuring safe food involves more than washing hands or cooking food to higher temperatures It involves politics When it comes to food safety billions of dollars are at stake and industry government and consumers collide over issues of values economics and political power and not always in the public interest Although the debates may appear to be about science Nestle maintains that they really are about control Who decides when a food is safe She demonstrates how powerful food industries oppose safety regulations deny accountability and blame consumers when something goes wrong and how century old laws for ensuring food safety no longer protect our food supply Accessible informed and even handed Safe Food is for anyone who cares how food is produced and wants to know more about the real issues underlying today s headlines

Consumer demand and willingness to pay for safe food in Accra, Ghana: Implications for public and private sectors' roles in food safety management Ragasa, Catherine, Andam, Kwaw S., Amewu, Sena, Asante, Seth, 2019-01-10 Consumer demand for food safety is likely to be an important driver of public policies and industry led efforts to reduce information asymmetry on food attributes and improved food safety This paper examines the attribute demand for chicken meat and tilapia among 803 shoppers in Accra Ghana Freshness is the main attribute demanded by the overwhelming majority of shoppers followed by food safety price taste and size Consumers are willing to pay price premiums for food safety certifications i e those certified according to Hazard Analysis and Critical Control Point HACCP principles or certified as free of antibiotic residue However the price premium shoppers are willing to pay for improved food safety vary by shoppers type A third of tilapia shoppers and half of chicken meat shoppers are classified as food safety conscious shoppers and willing to pay a 10 to 12 percent higher price than noncertified products In comparison only a tenth of shoppers are considered to be price conscious and willing to pay a small premium 1 percent for certified safe foods We also tested an information treatment on the negative health implications of food contamination and its effect on shoppers decisions The information treatment randomly assigned to shoppers was a significant predictor of food safety attribute demand for chicken meat but not for tilapia which may be linked to greater awareness of and concern about antibiotic misuse in poultry production Our findings generally point to a concern about food safety and a strong demand and willingness among consumers to pay premiums for certified safe foods thus providing support for public or industry led schemes to provide food safety information to consumers
