Designing Sustainable Cities Rachel Cooper, Graeme Evans, Christopher Boyko, 2009-11-24 This book offers practical solutions to achieving sustainable urban design and development and helps designers communicate these solutions effectively to planners developers and policy makers Addressing sustainability issues in relation to the design and planning of the urban environment is a complex multi disciplinary issue and solutions never arrive from a single perspective The authors use design as a facilitating factor to consider when and by whom decisions that contribute to sustainability are made and through three major city centre case studies London Manchester and Sheffield they consider social environmental and economic factors and examine their relationship to the decision making process Designing Sustainable Cities begins by identifying the key processes and lead decision makers The following chapters develop an understanding of the dimensions of sustainability presenting the tools by which the dimensions can be analysed Later chapters illustrate the trade offs and the relationships between the dimensions of sustainability with case study examples as well as the use of IT in making design decisions Finally the book makes recommendations for future approaches to the design development and on going management of urban environments Designing Sustainable Cities covers latest research data on the urban environment and the interaction between social economic and environmental issues methods of understanding the context in which urban design takes place guidance on the codes of practice process maps to help understand the context make trade offs and develop design solutions that allow for change methods for testing the consequences of design proposals and monitoring outcomes

Functionalism Revisited Jon Lang, Walter Moleski, 2016-12-05 A range of current approaches to architecture are neglected in our contemporary writings

on design philosophies This book argues that the model of function and the concept of a functional building that we have inherited from the twentieth century Modernists is limited in scope and detracts from a full understanding of the purposes served by the built environment It simply does not cover the range of functions that buildings can afford nor is it tied in a conceptually clear manner to our contemporary concepts of architectural theory Based on Abraham Maslow's theory of human motivations and following on from Lang's widely used text *Creating Architectural Theory The Role of the Behavioral Sciences in Environmental Design* Lang and Moleski here propose a new model of functionalism that responds to numerous observations on the inadequacy of current ways of thinking about functionalism in architecture and urban design Copiously illustrated the book puts forward this model and then goes on to discuss in detail each function of buildings and urban environments

The Urban Fabric of Crime and Fear Vania Ceccato, 2012-06-21 How does the city's urban fabric relate to crime and fear and how is that fabric affected by crime and fear Does the urban environment affect one's decision to commit an offence Is there a victimisation related inequality within cities How do crime and fear interrelate to inequality and segregation in cities of developing countries What are the challenges to planning cities which are both safe and sustainable This book searches for answers to these questions in the nature of the city particularly in the social interactions that take place in urban space distinctively guided by different land uses and people's activities In other words the book deals with the urban fabric of crime and fear The novelty of the book is to place safety and security issues on the urban scale by 1 showing links between urban structure and crime and fear 2 illustrating how different disciplines deal with urban vulnerability to and fear of crime 3 including concrete examples of issues and challenges found in European and North American cities and without being too extensive also in cities of the Global South

The Sustainable City XIV G. Passerini, S. Ricci, 2020-12 Urban areas result in a series of environmental challenges varying from the consumption of natural resources and the subsequent generation of waste and pollution contributing to the development of social and economic imbalances As cities continue to grow all over the world these problems tend to become more acute and require the development of new solutions The challenge of planning sustainable contemporary cities lies in considering the dynamics of urban systems exchange of energy and matter and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems The task of researchers aware of the complexity of the contemporary city is to improve the capacity to manage human activities pursuing welfare and prosperity in the urban environment Any investigation or planning for a city ought to consider the relationships between the parts and their connections with the living world The dynamics of its networks flows of energy matter people goods

information and other resources are fundamental for an understanding of the evolving nature of today's cities. Large cities are probably the most complex mechanisms to manage. They represent a fertile ground for architects, engineers, city planners, social and political scientists and other professionals able to conceive new ideas and time them according to technological advances and human requirements. Papers presented at the 14th International Conference on Urban Regeneration and Sustainability address the multidisciplinary components of urban planning, the challenges presented by the increasing size of cities, the number of resources required and the complexity of modern society. Various aspects of the urban environment are covered and a focus is placed on providing solutions which lead towards sustainability.

The second edition of *21st Century Security and CPTED* includes the latest theory, knowledge and practice of

The War on Terror and the Normalisation of Urban Security Jon Coaffee, 2021-11-07. This book explores the processes by which in the 20 years after 9/11 the practices of urban security and counter terrorism have impacted the everyday experiences of the Western city. Highlighting the localised urban responses to new security challenges, it reflects critically upon the historical trajectory of techniques of territorialisation and physical protection, urban surveillance and the increasing need for cities to enhance resilience and prepare for anticipated future attacks and unpacks the practices and impacts of the intensification of recent urban security practices in the name of countering terrorism. Drawing on over 25 years of research and practical experience, the author utilises a range of international case studies framed by conceptual ideas drawn from critical security, political and geographical theory. The book will be of interest to students and scholars of politics, war studies, urban studies, geography, sociology, criminology and the growing market of security and resilience professionals as well as non-academic audiences seeking to understand responses to terrorist risk.
