**Safety and Security of Commercial Spent Nuclear Fuel Storage** Committee on the Safety and Security of Commercial Spent Nuclear Fuel Storage, National Research Council, 2006-01-19 In response to a request from Congress the Nuclear Regulatory Commission and the Department of Homeland Security sponsored a National Academies study to assess the safety and security risks of spent nuclear fuel stored in cooling pools and dry casks at commercial nuclear power plants The information provided in this book examines the risks of terrorist attacks using these materials for a radiological dispersal device Safety and Security of Commercial Spent Nuclear Fuel is an unclassified public summary of a more detailed classified book The book finds that successful terrorist attacks on spent fuel pools though difficult are possible A propagating fire in a pool could release large amounts of radioactive material but rearranging spent fuel in the pool during storage and providing emergency water spray systems would reduce the likelihood of a propagating fire even under severe damage conditions The book suggests that additional studies are needed to better understand these risks Although dry casks have advantages over cooling pools pools are necessary at all operating nuclear power plants to store at least the recently discharged fuel The book explains it would be difficult for terrorists to steal enough spent fuel to construct a significant radiological dispersal device

**The European Waste Industry and Crime Vulnerabilities** Tom Vander Beken, 2007 The influence of organised crime on business activities enterprises and economic sectors is a matter of concern for many policy makers across the world As a profit driven criminal activity organised crime operates in an environment which is not limited to the underworld economy alone Assessments of the threat posed by organised crime and strategic preventive actions to tackle this phenomenon require an understanding of the vulnerable spots in the legal economy that are or might be exploited by crime This book is the outcome of a study known under the acronym MAVUS II Method for and Assessment of Vulnerability of Sectors II which addresses this issue The study provides a vulnerability profile of the European waste industry based on a new methodology to scan economic sectors for their vulnerability to organised crime Both vulnerability study and methodological tool are intended as a guide for actions and initiatives to be taken by governments law enforcement bodies and economic players

Nuclear Infrastructure

Protection and Homeland Security Frank R. Spellman, Melissa L. Stoudt, 2011-01-16 Experts agree though it is already important nuclear power will soon be critical to the maintenance of contemporary society With the heightened importance of nuclear energy comes a heightened threat of terrorism The possibility of nuclear energy infrastructure terrorism that is the use of weapons to cause damage to the nuclear energy industrial sector which would have widespread devastating effects is very real In Nuclear Infrastructure Protection and Homeland Security authors Frank R Spellman and Melissa L Stoudt present all the information needed for nuclear infrastructure employers and employees to handle security threats they must be prepared to meet The book focuses on three interrelated nuclear energy infrastructure segments nuclear reactors radioactive materials and nuclear waste It presents common sense methodologies in a straightforward manner so the text is accessible even to those with little experience with nuclear energy who are nonetheless concerned about the protection of our nuclear infrastructure Important safety and security principles are outlined along with security measures that can be implemented to ensure the safety of nuclear facilities      **News Releases** ,2005      **Environmental Politics and Policy** Walter A. Hippel, Masafumi Takubo, Jungmin Kang, 2019-12-23 This book provides a readable and thought provoking analysis of the issues surrounding nuclear fuel reprocessing and fast neutron reactors including discussion of resources economics radiological risk and resistance to nuclear proliferation It describes the history and science behind reprocessing and gives an overview of the status of reprocessing programmes around the world It concludes that such programs should be discontinued While nuclear power is seen by many as the only realistic solution to the carbon emission problem some national nuclear establishments have been pursuing development and deployment of sodium cooled plutonium breeder reactors and plutonium recycling Its proponents argue that this system would offer significant advantages relative to current light water reactor technology in terms of greater uranium utilization efficiency and that separating out the long lived plutonium and other transuranics from spent fuel and fissioning them in fast reactors would greatly reduce the duration of the toxicity of radioactive waste However the history of efforts to deploy this system commercially in a number of countries over the last six decades has been one of economic and technical failure and in some cases was used to mask clandestine nuclear weapon development programs Covering topics of significant public interest including nuclear safety fuel storage environmental impact and the spectre of nuclear terrorism this book presents a comprehensive analysis of the issue for nuclear engineers policy analysts government officials and the general public Frank von Hippel Jungmin Kang and Masafumi Takubo three internationally renowned nuclear experts have done a valuable service to the global community in putting together this book which both historically and comprehensively covers the plutonium age as we know it today They articulate in a succinct and clear manner their views on the dangers of a plutonium economy and advocate a ban on the separation of plutonium for use in the civilian fuel cycle in view of the high proliferation and nuclear security risks and lack of economic justification Mohamed ElBaradei Director General International Atomic Energy Agency 1997 2009 Nobel Peace Prize 2005 The 1960s dream of a plutonium economy has not delivered abundant low cost energy but instead has left the world a radioactive legacy of nuclear weapons proliferation and the real potential for nuclear terrorism Kang Takubo and von Hippel explain with power and clarity what can be done to reduce these dangers The governments of the remaining countries whose nuclear research and development establishments are still pursuing the plutonium dream should pay attention Senator Edward Markey a leader in the US nuclear disarmament movement as a member of Congress since 1976 The authors have done an invaluable service by putting together in one place the most coherent analysis of the risks associated with plutonium and the most compelling argument for ending the practice of separating plutonium from spent fuel for any purpose They have given us an easily accessible history of the evolution of thinking about the nuclear fuel cycle the current realities of nuclear power around the world and arguably most important a clear alternative path to deal with the spent fuel arising from nuclear reactors for decades to centuries to come Robert Gallucci Chief US negotiator with North Korea 1994 Dean Georgetown University School of Foreign Service 1996 2009 President MacArthur Foundation 2009 2014 **American Energy** Walter
