Safety And Efficacy Of Radiopharmaceuticals:

Safety and efficacy of radiopharmaceuticals Knud Kristensen, Elisabeth Nørbygaard, 2012-12-06 Safety and efficacy of radiopharmaceuticals are elements of great importance in nuclear medicine Since the first meeting in 1965 in Oak Ridge with the title Radiopharmaceuticals tremendous developments have taken place In 1965 the whole technetium 99m area was just in its very beginning Safety and efficacy of the non radioactive pharmaceuticals have attracted great attention during the last 10 years and so have similar aspects of radiopharmaceuticals during the later years Regulatory agencies are extending their work also to the preparation of radiopharmaceuticals at hospitals and to requirements for registration of radiopharmaceuticals In a fast developing field there might be tendencies to confrontation between interests and there have certainly been some tendencies to put undue restrictions on the use of radio pharmaceuticals due to the lack of understanding between the industry and the regulatory authorities and between regulatory authorities and hospitals Much of this may have been due to lack of information and certainly is due to the lack of fundamental scientific knowledge in many radiopharmaceutical aspects A fast and safe introduction of new radio pharmaceuticals and the proper handling of these requires a lot of development work but also an understanding of how general principles from the non radioactive drug field may be sensibly transformed into the radiopharmaceutical area It may even require compromises between requirements for safety in different areas such as radiation protection and pharmaceutical aspects

Safety and efficacy of radiopharmaceuticals 1987 Knud Kristensen, Elisabeth Nørbygaard, 2012-12-06 Safety and Efficacy of Radiopharmaceuticals was established as a very important and comprehensive subject at the First European Symposium on Radiopharmacy and Radiopharmaceuticals in Denmark in 1983 The interest in this subject has grown considerably since then due to the growing interest among national authorities to deal with radiopharmaceuticals The introduction in recent years of nuclear medicine techniques based on radioactive labelled cells and on monoclonal antibodies has stressed the importance of a well functioning approval system for the clinical trial and use of new radiopharmaceuticals The process of transferring the experience from the non radioactive drug field into the area of radiopharmaceuticals is still ongoing International organisations such as the World Health Organisation is also including this into their quality assurance programme from both the radiopharmaceutical and the radiation hygiene point of view In order to give an up to date survey of these areas experts were invited to prepare review papers under the following headings Safety and Efficacy of Radiopharmaceuticals with Emphasis on Biological Products Radiopharmacy Radiation Hygiene Legal Aspects of the Introduction of New Radiopharmaceuticals and some selected aspects of Good Radiopharmacy Practice

Global Regulations of Medicinal, Pharmaceutical, and Food Products Faraat Ali, Leo M.L. Nollet, 2024-07-05 Medicine regulation demands the application of sound medical scientific and technical knowledge and skills and operates within a legal framework Regulatory functions involve interactions with various stakeholders e.g. manufacturers traders consumers health professionals researchers and governments whose economic social and political motives may differ making implementation of regulation both politically and technically challenging This book discusses regulatory landscape globally and the current global regulatory scenario of medicinal products and food products comprehensively Features Discusses how recent developments of medicinal and food products have opened up innovative solutions for many of the current challenges societies face presently Explores the manifold variations between the regulatory bodies in different countries that have not previously been collected to this extent Presents details on the substantial progress in analytical methodologies for labelling applications and the creation of appropriate test criteria for pharmaceuticals and their safety analysis Reviews how more worldwide collaboration and cooperation in the regulatory area is still required

Current Directions in Radiopharmaceutical Research and Development Steven J. Mather, 2012-12-06 Radiopharmaceutical research has recently undergone a major change in direction In past years it has been concerned mainly with the development of perfusion tracers the biodistribution of which reflect the regional blood flow to areas of major organs such as the heart and brain However a major new direction of interest now lies in the development of receptor binding radio tracers which can be used to perform in vivo characterisation of diseased tissues and it is likely that

much of the future research in this field will follow this direction. The difficulties in developing such tracers are considerable. The researcher must first identify a promising target for radiopharmaceutical development. High specific activity radioactive molecules must be designed and synthesised which will both bind to the target receptor with high affinity and also have the physicochemical characteristics which will allow them to reach the target site in sufficient quantity while at the same time showing minimal uptake in non target tissues. Thus the knowledge base required for radiopharmaceutical development has now expanded beyond the limits of radiopharmaceutical chemistry to include aspects of biochemistry, molecular biology and conventional drug design. The portfolio of basic knowledge required to support current radiopharmaceutical development is changing and scientists working in this arena need to be trained in this regard. At the same time the very latest developments in the field need to be communicated to the scientific community in order to stimulate the advancement of this exciting new direction of research.

Nuclear Medicine Radiation Dosimetry Brian J McParland, 2010-07-03. Complexities of the requirements for accurate radiation dosimetry evaluation in both diagnostic and therapeutic nuclear medicine including PET have grown over the past decade. This is due primarily to four factors: Growing consideration of accurate patient specific treatment planning for radionuclide therapy as a means of improving the therapeutic benefit; development of more realistic anthropomorphic phantoms and their use in estimating radiation transport and dosimetry in patients; Design and use of advanced Monte Carlo algorithms in calculating the above mentioned radiation transport and dosimetry which require the user to have a thorough understanding of the theoretical principles used in such algorithms; their appropriateness and their limitations; increasing regulatory scrutiny of the radiation dose burden borne by nuclear medicine patients in the clinic and in the development of new radiopharmaceuticals thus requiring more accurate and robust dosimetry evaluations. An element common to all four factors is the need for precise radiation dosimetry in nuclear medicine which is fundamental to the therapeutic success of a patient undergoing radionuclide therapy and to the safety of the patients undergoing diagnostic nuclear medicine and PET procedures. As the complexity of internal radiation dosimetry applied to diagnostic and therapeutic nuclear medicine increases this book will provide the theoretical foundations for enabling the practising nuclear medicine physicist to understand the dosimetry calculations being used and their limitations, allowing the research nuclear medicine physicist to critically examine the internal radiation dosimetry algorithms available and under development and providing the developers of Monte Carlo codes for the transport of radiation resulting from internal radioactive sources with the only comprehensive and definitive.
